3.2. **Penetration**. Piling lengths shown on the plans are the lengths estimated to provide required bearing and for estimating purposes only. Drive piling to plan tip elevations or to greater depths as necessary to obtain the required allowable dynamic resistance meeting or exceeding the foundation load shown on the plans.

The Engineer will establish regular pile lengths based on the test data when test piling or test-loaded piling is used. Drive regular piling to this approximate elevation in these cases and to greater depths as required to obtain the plan bearing resistance.

Provide either pilot holes, jetting, or a combination of both for unusually hard driving conditions, typically less than 0.1 in. of penetration per blow if plan penetration is not obtained. Reduce penetration upon approval when the piling is advanced to within 5 ft. of plan length, unless other penetration requirements or bearing evaluation methods govern.

3.3. **Pilot Holes**. Extend pilot holes no more than 5 ft. below the bottom of footings for foundation piling or 10 ft. below finished ground line for trestle piling, unless the specified penetration cannot be obtained by using the depth of holes indicated or specified. The maximum hole diameter permitted will be approximately 4 in. less than the diagonal of square piling or steel H-piling and 1 in. less than the diameter of round piling. Determine the size and depth of pilot holes from the results of trial operations on the first piling driven or from available test pile data when deeper ones are required. Obtain approval for any depth or size of pilot holes that exceeds the maximums specified in this Section. The Engineer may vary hole size and depth to obtain penetration and bearing resistance.

Extend pilot holes through all embankments to natural ground when driving concrete piling.

Where a pilot hole is required in granular material that cannot be sealed off by ordinary drilling methods, a casing may be required around the boring device deep enough to prevent loose material from falling into the pilot hole.

Drive the piling below the depth of the pilot hole at least 1 ft. or 100 blows, but not less than the required bearing resistance shown on the plans. Do not drive piling beyond the point where the penetration per blow is less than 0.1 in. as determined by an average of 10 blows, unless directed otherwise. Stop driving if damage to the pile is apparent.

3.4. **Jetting**. Jetting is permitted when the specified penetration cannot be obtained by driving and pilot holes or other methods are not feasible. Submit details of the proposed methods for approval before jetting. The Engineer may authorize varying depths of jetting to achieve the desired results.

Jet as required in conjunction with driving but only to the approved depth. Use enough power for jetting operations to simultaneously operate at least two 2-1/2 in. diameter pipes equipped with 3/4-in. nozzles at a pressure of 150 psi. Perform the jetting with one or two jets as determined and approved from results of trial operations.

Drive the piling below the depth of the jetting at least 1 ft. or 100 blows, but not less than the required bearing resistance shown on the plans. Do not drive piling beyond the point where the penetration per blow is less than 0.1 in. as determined by an average of 10 blows, unless directed otherwise. Stop driving if damage to the pile is apparent.

3.5. **Hammer Formula Method of Bearing Evaluation**. Determine the allowable dynamic bearing resistance of piling by one of the hammer formulas in this Section unless otherwise shown on the plans. If the Engineer has determined a K factor based on test piling, test-loaded piling, or other methods, the computed allowable resistance will be the driving resistance determined based on the appropriate formula multiplied by the K factor. The computed allowable resistance should be greater than or equal to the foundation load shown on the plans.

3.5.1. **Single-Acting Power Hammers**. Use the following formula.

$$P_a = \frac{2WH}{S + 0.1}$$

where:
P_a = allowable dynamic resistance in pounds
W = weight of ram in pounds
H = height of fall of ram in feet (field-measured)
S = average penetration in inches per blow for the last 20 blows

Determine H by an approved electronic stroke indicator and blow count logging device provided by the Contractor. Pending approval, H can be determined by visual observation of the ram against a calibrated rod mounted on the hammer, or by the following formula.

$$H = 16.1 \times \left(\frac{30}{B}\right)^2 - 0.3$$

where:
B = blows per minute

3.5.2. **Double-Acting Power Hammers**. Use the following formula.

$$P_a = \frac{2E}{S + 0.1}$$

where:
P_a = allowable dynamic resistance in pounds
E = manufacturer's rated energy in foot-pounds (for double-acting power hammers), or the equivalent energy in foot-pounds determined by a calibrated gauge attached to the hammer and taken when the average penetration in inches per blow is determined (for enclosed ram diesel hammer)
S = average penetration in inches per blow for the last 20 blows

3.5.3. **Other Hammer Types**. Provide a wave equation analysis for each pile, hammer, soil, and load combination for which the driving system is to be used. The analysis will determine the bearing capacity of the piling.

3.6. **Wave Equation Method of Bearing Evaluation**. Submit the following data when the plans specify the bearing capacity of the piling is determined by the wave equation method:

- manufacturer's specification data for the hammer proposed for use, including all modifications and
- complete description and dimensions of all cushioning material used between the pile and helmet and in the cap block, including total thickness of each, and the direction of grain if wood is used.

These data will be used by the Engineer to determine the required number of blows per unit of penetration the hammer must deliver to obtain the required bearing resistance.

After evaluation by the wave equation method, any change in the driving equipment may require reevaluation. Such changes must be approved before further driving.

3.7. **Test Piling**. Drive test piling at locations shown on the plans or as directed. Make test piling part of the completed work, cut off or built up to grade as necessary. Use the required bearing evaluation method to determine bearing resistance.

Initially drive test piling to 3 ft. above plan tip elevation of the regular piling for the structure with the blow count recorded for each foot of driving. (For example, drive test piling to 13 ft. above its plan tip elevation if the test piling is 10 ft. longer than regular piling.) Retain the cushion if used.

Re-drive the test piling the additional length required by the plans at least 7 days after the original driving using the same hammer and cushion originally used. Record the blow count for each inch of driving for the first foot, for every 3 in. for the next 2 ft., and for each foot thereafter.

Provide the data to the Engineer for use in determining regular piling lengths and K factors. The K factor will be determined based on the following formula.

$$K = P_R / P$$

where:
K = a static correction factor applied to the evaluation method
P_R = re-drive bearing (ton) of the test pile determined by the evaluation method
P = original bearing (ton) of test pile determined by the evaluation method

3.8. **Test-Loaded Piling**. Conduct test load in accordance with Item 405, "Foundation Load Test."

Provide the data to the Engineer for use in determining regular piling lengths and K factors. The K factor will be determined based on the following formula.

$$K = L / P$$

where:
K = a static correction factor applied to the evaluation method
L = maximum safe static load proven by test load
P = bearing resistance of the test-loaded pile determined by the evaluation method

4. MEASUREMENT AND PAYMENT

The work performed, materials furnished, equipment, labor, tools, and incidentals will not be paid for directly, but will be subsidiary to pertinent Items.

Item 405
Foundation Load Test

1. DESCRIPTION

Load-test piling or drilled shafts.

2. MATERIALS

Provide piling or drilled shafts for test loading as shown on the plans.

3. EQUIPMENT

Furnish all necessary tools and equipment required to perform the foundation load test.

4. CONSTRUCTION

Furnish and drive the piling in accordance with Item 404, “Driving Piling,” or construct the shaft in accordance with Item 416, “Drilled Shaft Foundations,” to be test-loaded. Use the same procedure for drilling the test shaft as for the shafts required in the structure.

Keep a complete record of pile-driving data and shaft-drilling data for all foundations used in the test load. Apply the test load no earlier than the seventh day after driving the test piling or after placing concrete in the test shaft. Load the test shaft only after the concrete design strength has been attained.

Perform the foundation load test as shown on the plans and in accordance with the following.

- ASTM D1143
- ASTM D4945
- ASTM D7383
- ASTM D8169

Dismantle the test setup after completing the test if applicable.

Remove piling or shafts that are not part of the structure upon completion of the test load, or cut off at least 1 ft. below the bottom of the footing or the finished grade. Re-drive permanent piling to its original grade and bearing if it is raised during the test load.

5. MEASUREMENT

Measurement will be made for each complete test load satisfactorily performed, reported, and accepted.

6. PAYMENT

The work performed and materials furnished in accordance with this Item and measured as provided under “Measurement” will be paid for at the unit price bid for each “Foundation Load Test.” This price is full compensation for material, equipment, labor, work, tools, and incidentals.

Test piling or test shafts and associated reaction piling or shafts that are not part of the permanent structure will not be paid for directly, but will be subsidiary to this Item. Test piling or test shafts that are part of the permanent structure will be paid for under the pertinent Items.

Item 406
Timber Piling

1. DESCRIPTION

Furnish and place treated or untreated timber piling.

2. MATERIALS

Furnish timber piling in accordance with ASTM D25. Use any species of durable timber for untreated piling that will satisfactorily stand driving. Use Southern pine impregnated with a preservative for treated piling in accordance with Item 492, "Timber Preservative and Treatment," or as shown on the plans.

Furnish round piling in the lengths shown on the plans, with a minimum circumference of 38 in. for piling 40 ft. or less in length, and 41 in. for piling more than 40 ft. Measure the circumference under the bark at a section 3 ft. from the butt or at the tip.

For treated timber piling, treat cuts, bolt holes, and other areas where the surface of the piling is broken in accordance with Item 492.

2.1. **Inspection**. All piling is subject to inspection before and after treatment. Allow the Inspector free access to all sites where materials are being produced or processed, and provide any assistance necessary for the proper inspection of materials.

2.2. **Storing and Handling**. Prevent excessive splitting, checking, warping, distortion, or any other damage that may cause the piling to be rejected. Handle all timber piling carefully without dropping, breaking outer fibers, bruising, or penetrating the surface with tools.

3. EQUIPMENT

Handle piling with rope slings. Use handling equipment that does not penetrate the treated shell into untreated wood.

4. CONSTRUCTION

Drive piling in accordance with Item 404, "Driving Piling."

4.1. **Splices, Buildups, and Cutoffs**. Saw tops of all piling to a true plane as shown on the plans and at the established elevation. Saw piling that supports timber caps or connects to other members to the exact plane of the connected member.

Build up piling by splicing on an additional length of piling of the same diameter and quality when required. Make splices as shown on the plans or as directed. Construct the splice after the pile head and the lower end of the buildup section have been squared up and treated in accordance with Section 406.4.2., "Treatment of Pile Ends." Use no more than one splice in any single pile.

4.2. **Treatment of Pile Ends**.

4.2.1. **Treated Timber**. Give the ends of piling three coats of a preservative determined appropriate for the original preservative in accordance with AWPA Standard M4 after cutting. Follow with one coat of coal-tar roofing cement in accordance with ASTM D5643.

4.2.2. **Untreated Timber**. Coat the heads of piling thoroughly with a thick protective coat of hot tar or hot asphaltum.

Cover the pile heads after treatment with a sheet of 20-gauge galvanized metal when shown on the plans. Provide a cover that overlaps the sides of the piling at least 3 in. Bend the cover down over the piling and fasten it with large-headed galvanized nails or as shown on the plans.

5. MEASUREMENT

5.1. **Timber Piling**. Timber piling will be measured by the foot of acceptable piling in place after all cutoffs and splices have been made. When the Contractor elects to drive piling deeper than required to meet the specified length and bearing requirements, no measurement will be made on that portion below the elevation at which length and bearing requirements were first obtained.

5.2. **Splices**. Splices will be measured by each authorized, completed splice made necessary by driving beyond the plan pile length to obtain required bearing resistance. No measurement will be made for a splice made necessary by unsuitable material, handling, driving, or overdriving.

5.3. **Cutoffs**. Cutoffs will be measured by the foot of cutoff above required grade. No cutoff will be measured on any pile that is built up.

6. PAYMENT

The unit price bid is full compensation for jetting, pilot holes, alignment holes, driving piling, repairs, materials, equipment, tools, labor, and incidentals.

6.1. **Timber Piling**. The work performed and materials furnished in accordance with this Item and measured as provided under “Measurement” will be paid for at the unit price bid for “Treated Timber Piling” or “Untreated Timber Piling.”

6.2. **Splices**. An additional payment for each authorized, completed splice, regardless of buildup length, will be made at a price equal to four times the unit price bid for “Treated Timber Piling” or “Untreated Timber Piling.” Where piling is trimmed back for the purpose of constructing a splice, payment for the cutoff is included in the payment for the splice.

6.3. **Cutoffs**. Payment for cutoff lengths will be made at a price equal to 1/2 the unit price bid for “Treated Timber Piling” or “Untreated Timber Piling.”

Item 409
Prestressed Concrete Piling

1. DESCRIPTION

Furnish and place prestressed concrete piling.

2. MATERIALS

Use materials that meet the requirements of the following Items.

- Item 420, “Concrete Substructures”
- Item 421, “Hydraulic Cement Concrete”
- Item 425, “Precast Prestressed Concrete Structural Members”
- Item 440, “Reinforcement for Concrete”

Fabricate prestressed concrete piling in accordance with the following Items.

- Item 424, “Precast Concrete Structural Members (Fabrication)”
- Item 425, “Precast Prestressed Concrete Structural Members”

Furnish piling in the lengths shown on the plans when test or test-loaded piling is not required. When test or test-loaded piling is required, the Engineer will approve lengths based on test driving data or test load data. Cast regular piling only after the Engineer has determined the approved lengths based on the test or test-loaded piling.

3. CONSTRUCTION

Handle and store piling in a way that minimizes the risk of damage by impact or bending stress. Store piling above ground on adequate blocking. Do not use chain slings to handle piling. Immediately review and correct conditions causing the damage to any piling. Drive piling in accordance with Item 404, “Driving Piling.” Test-load, when required, in accordance with Item 405, “Foundation Load Test.”

3.1. **Defects and Breakage**. Damage to piling due to faulty materials or construction methods may be cause for rejection. Piling damaged in the process of fabrication, handling, storing, hauling, or driving is subject to the acceptance criteria and repair provisions in accordance with the *Concrete Repair Manual*.

3.2. **Buildups and Cutoffs**. Construct buildups as shown on the plans and in accordance with Item 420. Make the final cut of the concrete square to the longitudinal axis for cutoffs.

3.3. **Test Piling**. Test piling must meet requirements for prestressed concrete piling. The Engineer may adjust the number of test piles to secure desired information.

4. MEASUREMENT

4.1. **Concrete Piling**. Prestressed concrete piling and prestressed concrete test piling will be measured by the foot of acceptable piling in place after all cutoffs and buildups have been made. When the Contractor elects to drive piling deeper than required to meet the specified length and bearing requirements, no measurement will be made on that portion below the elevation at which length and bearing requirements were first obtained.

4.2. **Buildups**. Buildups will be measured by each authorized, completed buildup made necessary by driving beyond the plan pile length to obtain required bearing resistance. No measurement will be made for a buildup made necessary by improper casting, handling, or driving.

4.3. **Cutoffs**. Cutoffs for both regular and test piling will be measured by the foot of cutoff above required grade.

5. PAYMENT

The unit price bid is full compensation for jetting, pilot holes, alignment holes, repairs, materials, tools, equipment, labor, and incidentals. Test-loaded piling and associated reaction piling that are not part of the permanent structure will not be paid for directly, but will be subsidiary to Item 405. Any test load ordered by the Engineer that is not provided for in the Contract will be paid for in accordance with Article 9.7., "Payment for Extra Work and Force Account Method."

5.1. **Concrete Piling**. The work performed and materials furnished in accordance with this Item and measured as provided under "Measurement" will be paid for at the unit price bid for "Prestressed Concrete Piling" or "Prestressed Concrete Test Piling" of the size specified.

5.2. **Buildups**. An additional payment for each completed authorized buildup splice for both regular and test piling, regardless of buildup length, will be made at a price equal to 10 times the unit price bid for "Prestressed Concrete Piling." Where piling is broken back for constructing buildups, payment for the breakback is included in the payment for buildups.

5.3. **Cutoffs**. Payment for cutoff lengths of both regular piling and test piling will be made at a price equal to 1/2 the unit price bid per foot for "Prestressed Concrete Piling." Payment for cut is included in the payment for cutoffs.

Item 416
Drilled Shaft Foundations

1. DESCRIPTION

Construct foundations consisting of reinforced or non-reinforced concrete drilled shafts.

2. MATERIALS

Use materials that meet the requirements of the following Items.

- Item 421, “Hydraulic Cement Concrete”
- Item 440, “Reinforcement for Concrete”
- Item 448, “Structural Field Welding”

Use concrete for drilled shafts that meets the requirements shown in Table 1 unless otherwise shown on the plans.

Table 1
Concrete for Drilled Shafts

Drilled Shaft Type	Concrete
Non-reinforced	Class A
Reinforced	Class C
Slurry and underwater concrete placement	Class SS

Use coarse aggregate Grade 4, 5, or 6 for drilled shaft concrete in reinforced drilled shafts. Grade 2 or Grade 3 may be used if the shaft is dry and reinforcing steel has a 5 in. minimum clear spacing.

Use a water-reducing, retarding admixture in accordance with DMS-4640, “Chemical Admixtures for Concrete,” in all concrete when using casing that will be pulled or when placing shafts under water or under slurry.

Use concrete with slump that meets the requirements shown in Table 2 as determined in accordance with Tex-415-A.

Table 2
Slump Requirements

Placement Type	Min Acceptable Placement Slump (in.)	Recommended Design and Placement Slump (in.)	Max Acceptable Placement Slump (in.)
Dry	5-1/2	6-1/2	7-1/2
Underwater and under slurry	7	8	9

Perform a slump loss test in accordance with Tex-430-A before beginning work when casing is to be pulled or concrete is to be placed underwater or under slurry. Provide concrete that will maintain a slump of at least 4 in. throughout the entire anticipated time of concrete placement. Time of concrete placement is in accordance with Section 416.3.6., “Concrete,” and Section 416.3.7., “Additional Requirements for Slurry Displacement or Underwater Concrete Placement Methods.” Note the temperature of the concrete mix at the beginning of the slump loss test. Place the concrete if its temperature at the time of placement into the drilled shaft is no more than 10°F higher than the slump loss test temperature. Use ice or other concrete-cooling ingredients to lower concrete temperature or run additional slump loss tests at the higher temperatures. Slump loss testing will be waived if anticipated time of concrete placement is less than 90 min.

Use mineral drilling slurry that meets the requirements shown in Table 3, as determined in accordance with Tex-130-E. Determine pH of slurry in accordance with Tex-128-E or using pH paper strips.

Table 3
Mineral Slurry Requirements

Before Introduction into Excavation			Sampled from Bottom of Excavation Before Concreting		
Specific Gravity	Sand Content	pH	Specific Gravity	Viscosity (sec.)	Sand Content
≤1.10	≤1%	8–11	≤1.15	≤45	≤4%

Use mineral slurry consisting of processed bentonite or attapulgite clays mixed with clean fresh water. Do not use partially hydrolyzed polyacrylamide (PHPA) polymeric slurry or any other fluid composed primarily of a polymer solution.

If approved, water may be used as the drilling fluid. In this case, all the provisions shown in Table 3 must be met, except that the maximum specific gravity is not to exceed 1.12.

Sample slurry from the bottom of the hole, before placing concrete, and test it in accordance with Tex-130-E. Use a pump or air lift to remove slurry that does not meet the requirements shown in Table 3 while adding fresh clean slurry to the top of the hole to maintain the slurry level. Continue this operation until the slurry sampled from the bottom of the hole meets the requirements.

3. CONSTRUCTION

Submit drilled shaft installation plan for review no later than 1 mo. before drilled shaft construction. Include the following in the plan:

- name and experience record of the drilled shaft superintendent who will be in charge of drilled shaft operations for the project;
- list of proposed equipment to be used, including cranes, drills, augers, bailing buckets, final cleaning equipment, de-sanding equipment, slurry pumps, core-sampling equipment, tremies or concrete pumps, and casing;
- details of overall construction operation sequence and the sequence of shaft construction in bents or groups;
- details of shaft excavation methods;
- when the use of slurry is anticipated, details of the slurry mix design and its suitability for the subsurface conditions at the construction site, mixing and storage methods, maintenance methods, and disposal procedures;
- details of methods to clean the shaft excavation;
- details of reinforcement placement, including support and centralization methods;
- details of concrete placement, including proposed operational procedures for free-fall, tremie, or pumping methods; and
- details of casing installation and removal methods.

The installation plan will be reviewed for conformance with the plans, specifications, and special provisions. The Contractor will be notified within 14 days of receipt of the installation plan of any additional information required or changes necessary to meet the Contract requirements. All procedural approvals will be subject to trial in the field and will not relieve the Contractor of the responsibility to satisfactorily complete the work as shown on the plans and in conformance with specifications.

Place the shaft to within the following tolerances.

- Vertical plumbness: 1 in. per 10 ft. of depth
- Center of shaft located under column: 1 in. of horizontal plan position

- Center of shaft located under footing: 3 in. of horizontal plan position

Complete the embankment at bridge ends before installing drilled shafts that pass through the fill. Refer to Item 423, "Retaining Walls," for provisions for drilled shafts passing through the structural volume of retaining walls.

3.1. **Excavation**. The plans indicate the expected depths and elevations for encountering satisfactory bearing material. Excavate as required for the shafts through all materials encountered to the dimensions and elevations shown on the plans or required by the site conditions. Removal of man-made obstructions not shown on the plans will be paid for in accordance with Article 9.7., "Payment for Extra Work and Force Account Method." Adjust the bottom of the shaft or alter the foundation if satisfactory founding material is not encountered at plan elevation, as approved, to satisfactorily comply with design requirements. Blasting is not allowed for excavations.

Stop drilling if caving conditions are encountered and adopt a construction method that stabilizes the shaft walls.

Do not excavate a shaft within two shaft diameters (clear) of an open shaft excavation, or one in which concrete has been placed in the preceding 24 hr.

Dispose of material excavated from shafts and not incorporated into the finished project as shown on the plans and in conformance with federal, state, and local laws.

Provide suitable access, lighting, and equipment for proper inspection of the completed excavation and checking of the dimensions and alignment of shaft excavation.

3.2. **Core Holes**. Take cores to determine the character of the supporting materials if directed. Use a method that will result in recovery of an intact sample adequate for judging the character of the founding material. Such cores should be at least 5 ft. deeper than the proposed founding grade or a depth equal to the diameter of the shaft, whichever is greater. Take these cores when the excavation is complete.

3.3. **Casing**. Use casing when necessary to prevent caving of the material, excluding groundwater, when slurry is used for hole stabilization, or when required in conformance with the Contractor's safety plan. Provide casing with an outside diameter not less than the specified diameter of the shaft. The portion of shaft below the casing may be as much as 2 in. smaller than the specified shaft diameter. No extra compensation will be made for concrete required to fill an oversized casing or oversized excavation. Use casing strong enough to withstand handling stresses and pressures of concrete and of the surrounding earth or water, and that is watertight, smooth, clean, and free of accumulations of hardened concrete.

Use construction methods that result in a minimal amount of disturbed soil trapped outside the casing. This does not apply to temporary undersized casings used to protect workers inside shafts or to drilled shafts designed for point bearing only.

Leave casing in place only if authorized or shown on the plans. Extract casing only after placing the concrete to an appropriate level. Always maintain enough concrete in the casing to counteract soil and water pressure. Rotate or move the casing up or down a few inches if necessary before and during concrete placement to facilitate extraction of the casing.

3.4. **Requirements for Slurry Displacement Method**. When soil conditions warrant, use the slurry displacement method to construct drilled shafts, unless otherwise shown on the plans. Use this method to support the sides of the excavation with processed mineral slurry that is then displaced by concrete to form a continuous concrete shaft.

Install surface casing to at least 10 ft. below existing ground before introducing slurry. Do not use casing other than surface casing. Do not use surface casing longer than 20 ft. without approval. Do not extract the surface casing until after placing the concrete.

Pre-mix slurry in a reservoir with enough capacity to fill the excavation and for recovery of the slurry during concrete placement. Do not mix slurry in the shaft excavation or other hole. Allow adequate time for hydration of the slurry before introduction into the excavation.

Maintain a head of slurry in the shaft excavation at or near ground level or higher, as necessary, to counteract groundwater pressure during and after drilling.

Use an air lift or proper size cleanout bucket, just before placing reinforcing steel, to remove any material that may have fallen from the sides of the excavation or accumulated on the bottom after the completion of drilling. Use a cleanout bucket if material is too large to be picked up using an air lift.

Re-process the hole using the auger as directed if concrete placement is not started within 4 hr. of the completion of the shaft excavation. Then clean the bottom using an air lift or cleanout bucket and check the slurry at the bottom of the hole for compliance with slurry requirements in accordance with Article 416.2., "Materials."

Agitate the congealed slurry to liquefaction if the slurry forms a gel before concrete placement, and whenever directed.

Recover and dispose of all slurry as approved, and in conformance with all federal, state, and local laws. Do not discharge slurry into or in close proximity to streams or other bodies of water.

3.5. **Reinforcing Steel**. Completely assemble the cage of reinforcing steel and place it as a unit immediately before concrete placement. The cage consists of longitudinal bars and lateral reinforcement (spiral reinforcement, lateral ties, or horizontal bands). Connect individual segments with couplers or by lapping steel as approved if overhead obstacles prevent placement of the cage as a single unit.

Extend the reinforcing steel cage as follows if the shaft is lengthened beyond plan length, unless directed otherwise.

- Extend the cage to the bottom for shafts supporting structures other than bridges.
- Extend the cage to 25 ft. or to the bottom, whichever is shorter, for bridge shafts with plan lengths less than 25 ft.
- Do not extend the cage for bridge shafts with plan lengths at least 25 ft. that are lengthened less than 33% of plan length.
- Extend the cage as directed for bridge shafts with plan lengths at least 25 ft. that are lengthened more than 33% of plan length.

If the cage does not reach the bottom of the shaft, it may be suspended, or a portion of the longitudinal steel may be extended to support the cage on the bottom of the shaft. Bars used to extend or support the cage may be lap spliced or welded by a qualified welder. Place the extension at the bottom of the shaft.

Tie spiral reinforcement to the longitudinal bars at a spacing no more than 24 in., or as required for a stable cage. Ensure lateral reinforcement is not welded to longitudinal bars unless otherwise shown on the plans.

Center the reinforcing steel cage in the excavation using approved "roller"-type centering devices unless otherwise approved. Use concrete or plastic chairs to keep the reinforcing cage off the bottom of the hole. Use centering devices starting at 1.5 ft. off from the bottom of the cage and spaced vertically at intervals not exceeding 10 ft. Use at least three centering devices per level at a spacing not to exceed 30 in. Flat or crescent-shaped centralizers ("sleds") are not allowed.

Support or hold down the cage to control vertical displacement during concrete placement or extraction of the casing. Use support that is concentric with the cage to prevent racking and distortion of the steel.

Check the elevation of the top of the steel cage before and after concrete placement or after casing extraction when casing is used. Downward movement of the steel up to 6 in. per 20 ft. of shaft length and upward movement of the steel up to 6 in. total are acceptable.

Maintain the minimum length of steel required for lap with column steel. Use dowel bars if the proper lap length is provided both into the shaft and into the column. Locate and tie all dowel bars into the cage before placing concrete.

Locate and tie anchor bolts when required before placement of concrete. Use templates or other devices to assure accurate placement of anchor bolts.

3.6. **Concrete**. Perform all work in accordance with Item 420, "Concrete Substructures." Provide concrete with maximum placement temperatures as shown in Table 4. Provide thermal analysis to show, and temperature-recording devices to verify, maximum concrete core temperature requirements are met in accordance with Section 420.4.7.14, "Mass Placements," for shafts with diameter exceeding 7 ft. Instrument the first shaft for each size shaft exceeding 7 ft. diameter, and as directed if results do not meet specifications and when the concrete mix design changes.

Table 4
Max Concrete Placing Temperature

Shaft Size	Mix Design Options 1–5	Mix Design Options 6–8
Diameter <5 ft.	95°F	95°F
5 ft. ≤ diameter ≤ 7 ft.	95°F	85°F
7 ft. < diameter	85°F	75°F

Form portions of drilled shaft that project above natural ground.

Remove loose material and accumulated seep water from the bottom of the excavation before placing concrete. No more than 3 in. of water should be present within the base of the excavation at the time of concrete placement. The rate of inflow should be confirmed by observation to be less than 12 in. per hour. Place concrete using underwater placement methods if seepage exceeds the tolerable levels cited above.

Place concrete as soon as possible after all excavation is complete and reinforcing steel is placed. Provide workable concrete that does not require vibrating or rodding. Vibrate formed portions of drilled shafts.

Place concrete continuously for the entire length of the shaft. Limit free fall of concrete to 25 ft. for dry shafts of 24-in. or smaller diameter. Use a suitable tube or tremie to prevent segregation of materials. Use a tube or tremie in sections to provide proper discharge and permit raising as the placement progresses. For dry shafts more than 24-in. diameter, concrete may be allowed to free fall an unlimited distance if it does not strike the reinforcing cage or sides of the hole during placement. Provide a hopper with a minimum 3-ft. long drop-tube at the top of the shaft to direct concrete vertically down the center of the shaft when free fall is used. Do not use a shovel or other means to simply deflect the concrete discharge from the truck.

Always maintain enough head of concrete for cased shafts above the bottom of the casing to overcome hydrostatic pressure. Extract casing at a slow, uniform rate with the pull in line with the axis of the shaft. Monitor the concrete level in the casing during extraction. Stop the extraction and add concrete to the casing as required to ensure a completely full hole upon casing removal. The elapsed time from the mixing of the first concrete placed into the cased portion of the shaft until the completion of extraction of the casing must not exceed the time for which the concrete maintains a slump of more than 4 in. in accordance with Article 416.2., "Materials." Modify the concrete mix, the construction procedures, or both for subsequent shafts if the elapsed time is exceeded.

Cure the top surface and treat any construction joint area in accordance with Item 420.

3.7. **Additional Requirements for Slurry Displacement or Underwater Concrete Placement Methods**. Place concrete on the same day the shaft is excavated and as soon as possible after all excavation is complete

and reinforcing steel is placed. Rework the hole by overdrilling a minimum 1/2 in. on all sides on the same day that concrete is placed when drilling of a hole is performed on multiple days if approved. Use an air lift or cleanout bucket of the proper size to clean the bottom of the excavation before placing the reinforcing steel cage and concrete. Place concrete through a closed tremie or pump it to the bottom of the excavation. The minimum tremie diameter will be at least six times the maximum size of aggregate used in the concrete mix, but not less than 10 in. Initially seal the tremie or pump line to positively separate the concrete from the slurry or water. Place concrete continuously from the beginning of placement until the shaft is completed. Always keep the tremie full of concrete and well submerged in the previously placed concrete if using a tremie. Raise the tremie as necessary to maintain the free flow of concrete and the stability of any casing used. Always keep the discharge tube submerged in the previously placed concrete if using a pump. Place additional concrete to ensure the removal of any contaminated concrete at the top of the shaft. Allow the top portion of concrete to flush completely from the hole at the completion of the pour until there is no evidence of slurry or water contamination. Do not attempt to remove this concrete using shovels, pumps, or other means. Level the top of shaft with hand tools as necessary.

Use a sump or other approved method to channel displaced fluid and concrete away from the shaft excavation. Recover slurry and dispose of it as approved. Do not discharge displaced fluids into or near streams or other bodies of water. Provide a collar or other means of capturing slurry and the top portion of concrete flushed from the shaft for pours over water.

Remove the tube, reseal it at the bottom, penetrate with the tube into the concrete already placed by at least 5 ft., and recharge it before continuing if concrete placement is interrupted due to withdrawal of the submerged end of the tremie or pump discharge tube before completion. If this condition exists, notify the Engineer and note the elevation and circumstances related to the loss of seal on the drilled shaft log.

The elapsed time from the mixing of the first concrete placed until the completion of concrete placement, including extraction of the casing, must not exceed the time for which the concrete maintains a slump of more than 4 in. in accordance with Article 416.2., “Materials.” Modify the concrete mix, the construction procedures, or both for subsequent shafts if the elapsed time is exceeded.

3.8. **Test Load**. Load test shafts, if required, in accordance with Item 405, “Foundation Load Test.”

3.9. **Trial Shaft**. When required on the plans, construct trial shafts to the depth and diameter shown on the plans. Trial shafts include drilling the hole, placement of the rebar cage (unless otherwise stated), and placement of the concrete. When trial shafts are required, delay start of production shafts until successful completion of trial shafts.

4. MEASUREMENT

4.1. **Drilled Shaft**. Drilled shaft foundations will be measured by the foot to the bottom of the shaft.

4.1.1. **Interior Bents and Piers**. Shafts will be measured from a point approximately 6 in. below the finished earthwork elevation at the center of each shaft, unless specific elevations or dimensions are shown on the plans or unless otherwise directed to meet unusual conditions. The bent height shown on the plans is for estimating purposes only and does not control the top-of-shaft measurement.

4.1.2. **Abutment Bents and Retaining Walls**. Shafts will be measured from the bottom of footing or cap elevation.

4.1.3. **Other Non-Bridge Structures**. Shafts, including trial shafts, will be measured from the top of the shaft.

4.2. **Core Hole**. Core holes will be measured by each core hole drilled.

5. PAYMENT

The unit prices bid for the various classifications of drilled shafts are full compensation for excavation; furnishing, placing, and removing casing; furnishing, processing, and recovering slurry; furnishing and

placing reinforcing steel; pumping; furnishing and placing concrete, including additional concrete required to fill an oversize casing or oversize excavation; conducting slump loss tests; backfilling; disposing of cuttings and slurry; and materials, tools, equipment, labor, and incidentals.

When the bottom of a drilled shaft is placed at an elevation below plan grade, no direct payment will be made for extra reinforcement placed to support the cage. The extra reinforcement will be subsidiary to the unit price bid per foot of shaft. No extra payment will be made for casings left in place, unless specified on the plans.

No payment will be made for "Drilled Shaft" until the concrete has been placed.

5.1. **Drilled Shaft**. The work performed and materials furnished in accordance with this Item and measured as provided under "Measurement" will be paid for at the unit price bid for "Drilled Shaft," "Drilled Shaft (Non-Reinforced)," "Drilled Shaft (Sign Mounts)," "Drilled Shaft (High Mast Pole)," "Drilled Shaft (Roadway Illumination Pole)," or "Drilled Shaft (Traffic Signal Pole)" of the specified diameter, subject to the limitations for overruns authorized by the Engineer in accordance with Section 416.5.1.1., "Overrun."

5.1.1. **Overrun**. Payment for individual completed shaft lengths up to and including 5 ft. more than the maximum plan length shaft, in accordance with Section 416.5.1.2., "Maximum Plan Length Shaft," will be made at the unit price bid per foot of the specified diameter.

Payment for the portion of individual completed shaft length more than 5 ft. and up to and including 15 ft. more than the maximum plan length shaft, in accordance with this Item, will be made at a unit price equal to 115% of the unit price bid per foot of the specified diameter.

Payment for the portion of individual completed shaft length greater than 15 ft. more than the maximum plan length shaft, in accordance with Section 416.5.1.2., "Maximum Plan Length Shaft," will be made at a unit price equal to 125% of the unit price bid per foot of the specified diameter.

5.1.2. **Maximum Plan Length Shaft**. Payment described in the previous Sections is subject to the following provisions for extra depth drilling.

- For bridge structures, the maximum plan length shaft is the maximum length shaft, regardless of diameter, for any drilled shaft on that specific bridge.
- For retaining walls, the maximum plan length shaft is the maximum length shaft, regardless of diameter, for any drilled shaft on that specific retaining wall.
- For overhead sign structures, the maximum plan length shaft is the maximum length shaft, regardless of diameter, for any overhead sign structures included in the Contract.
- For high mast illumination poles, the maximum plan length shaft is the maximum length shaft, regardless of diameter, for any high mast illumination pole included in the Contract.
- For roadway illumination poles, the maximum plan length shaft is the maximum length shaft, regardless of diameter, for any roadway illumination pole included in the Contract.
- For traffic signal poles, the maximum plan length shaft is the maximum length shaft, regardless of diameter, for any traffic signal pole included in the Contract.

5.2. **Core Hole**. Core holes will be paid at $200 each.

Item 420
Concrete Substructures

1. DESCRIPTION

Construct concrete substructures including footings, columns, caps, abutments, piers, culverts, other bridge substructure elements, and other concrete structures as indicated.

2. MATERIALS

2.1. **Concrete**. Provide concrete in accordance with Item 421, "Hydraulic Cement Concrete." Provide the class of concrete for each type of structure or unit as shown on the plans or in conformance with pertinent governing specifications.

2.2. **Grout or Mortar**. Provide grout for dowelling anchors or precast connections in accordance with DMS-4675, "Cementitious Grouts and Mortars for Miscellaneous Applications."

2.3. **Latex Curing Materials**. Provide an acrylic-polymer latex admixture (acrylic resin emulsion in accordance with DMS-4640, "Chemical Admixtures for Concrete") suitable for producing polymer-modified concrete or mortar. Do not allow latex to freeze.

2.4. **Reinforcing Steel**. Provide reinforcing steel in accordance with Item 440, "Reinforcement for Concrete."

2.5. **Expansion Joint Material**. Provide materials in accordance with DMS-6310, "Joint Sealants and Fillers."

- Provide preformed fiber expansion joint material that conforms to the dimensions shown on the plans.
- Provide preformed bituminous fiber material unless otherwise specified.
- Provide asphalt board that conforms to dimensions shown on the plans.
- Provide re-bonded neoprene filler that conforms to the dimensions shown on the plans.

2.6. **Waterstop**. Provide rubber or polyvinyl chloride (PVC) waterstops in accordance with DMS-6160, "Water Stops, Nylon-Reinforced Neoprene Sheet, and Elastomeric Pads," unless otherwise shown on the plans.

2.7. **Curing Materials**. Provide membrane curing compounds in accordance with DMS-4650, "Hydraulic Cement Concrete Curing Materials and Evaporation Retardants."

Provide cotton mats that consist of a filling material of cotton "bat" or "bats" (at least 12 oz. per square yard) completely covered with unsized cloth (at least 6 oz. per square yard) stitched longitudinally with continuous parallel rows of stitching spaced at less than 4 in., or tuft both longitudinally and transversely at intervals less than 3 in. Provide cotton mats that are free of tears and in good general condition. Provide a flap at least 6 in. wide consisting of two thicknesses of the covering and extending along one side of the mat.

Provide polyethylene sheeting that is at least 4 mils thick and free of visible defects. Provide only clear or opaque white sheeting when the ambient temperature during curing exceeds 90°F or when applicable to control temperature during mass pours.

Provide burlap-polyethylene mats made of burlap impregnated on one side with a film of opaque white pigmented polyethylene, free of visible defects. Provide laminated mats that have at least one layer of an impervious material such as polyethylene, vinyl plastic, or other acceptable material (either as a solid sheet or impregnated into another fabric) and are free of visible defects.

Provide burlap material that complies with AASHTO M 182, Class 3 (10 oz. per square yard) with the following additions.

- Manila hemp may also be used to make burlap.
- Do not use burlap fabricated from bags.
- Do not use burlap containing any water-soluble ingredient that will retard the setting time of concrete.

Provide used burlap that complies with the requirements stated above and that has only been used previously for curing concrete. "Like new" cleanliness is not expected, but contamination with any substance foreign to the concrete curing process, such as grease or oil, will be cause for rejection.

2.8. **Epoxy**. Provide epoxy materials in accordance with DMS-6100, "Epoxies and Adhesives," unless otherwise specified.

3. EQUIPMENT

3.1. **Transporting and Placing Equipment**. Use appropriate transporting and placing equipment such as buckets, chutes, buggies, belt conveyors, pumps, or other equipment as necessary. Ensure concrete is not transported or conveyed by equipment made of aluminum.

Use tremies to control the fall of concrete or for underwater placement. Use tremies that are watertight and of large enough diameter to allow the placement of the concrete but less than 14 in. in diameter. Construct the tremie so the bottom can be sealed and opened once the tremie has been fully charged with concrete for underwater placements.

Use pumps with lines at least 5 in. inside diameter (ID) where Grade 2 or smaller coarse aggregate is used, and at least 8 in. ID for Grade 1 coarse aggregate.

3.2. **Vibrators**. Use immersion-type vibrators for consolidation of concrete. Provide at least one standby vibrator for emergency use. Furnish vibrator head covered by a rubberized or elastomeric cover when used near epoxy coated reinforcing steel.

3.3. **Temperature Recording Equipment**. Use strip chart temperature-recording devices, recording maturity meters in accordance with Tex-426-A, or other approved devices that are accurate to within ±2°F within the range of 32–212°F for mass concrete operations, for cold weather placements, and as otherwise specified.

3.4. **Artificial Heating Equipment**. Use artificial heating equipment as necessary for maintaining the concrete temperatures in accordance with Section 420.4.7.11., "Placing Concrete in Cold Weather."

3.5. **Spraying Equipment**. Use mechanically powered pressure sprayers, either air or airless, with appropriate atomizing nozzles for the application of membrane curing. Use hand-pressurized spray equipment with two or three fan-spray nozzles if approved. Ensure the spray from each nozzle overlaps the spray from adjacent nozzles by approximately 50%.

3.6. **Concrete Testing Equipment**. Provide testing equipment for use by the Engineer in accordance with Section 421.3.3., "Testing Equipment."

4. CONSTRUCTION

Obtain approval for proposed construction methods before starting work. Approval of construction methods and equipment does not relieve the Contractor's responsibility for safety or correctness of methods, adequacy of equipment, or completion of work in full accordance with the Contract.

Unless otherwise shown on the plans, it is the Contractor's option to perform testing on structural concrete (structural classes of concrete are identified as shown in Table 8 of Section 421.4.1., "Classification of Concrete Mix Designs") to determine the in-situ strength to address the schedule restrictions in accordance

with Section 420.4.1., "Schedule Restrictions." The Engineer may require the Contractor to perform this testing for concrete placed in cold weather. Make enough test specimens for Contractor-performed testing to ensure strength requirements are met for the operations listed in Section 420.4.1., "Schedule Restrictions." Make at least one set of test specimens for each element cast each day. Cure these specimens under the same conditions as the portion of the structure involved for all stages of construction. Ensure safe handling, curing, and storage of all test specimens. Provide testing personnel, and sample and test the hardened concrete in accordance with Section 421.4.8., "Sampling and Testing of Concrete." The maturity method, Tex-426-A, may be used for in-situ strength determination for schedule restrictions if approved. Coring will not be allowed for in-situ strength determination for schedule restrictions. Provide the Engineer the opportunity to witness all testing operations. Report all test results to the Engineer.

If the Contractor does not wish to perform schedule restriction testing, the Engineer's 7-day lab-cured tests, performed in accordance with Article 421.5., "Acceptance of Concrete," will be used for schedule restriction determinations. The Engineer may require additional time for strength gain to account for field curing conditions such as cold weather.

4.1. **Schedule Restrictions**. Construct and open completed structures to traffic with the following limitations unless otherwise shown on the plans.

4.1.1. **Setting Forms**. Attain at least 2,500 psi compressive strength before erecting forms on concrete footings supported by piling or drilled shafts, or on individual drilled shafts. Erect forms on spread footings and culvert footings after the footing concrete has aged at least 2 curing days in accordance with Section 420.4.10., "Curing Concrete." Place concrete only after the forms and reinforcing steel have been inspected by the Engineer.

Support tie beam or cap forms by falsework on previously placed tie beams only if the tie beam concrete has attained a compressive strength of 2,500 psi and the member is properly supported to eliminate stresses not provided for in the design. Maintain curing as required until completion of the curing period.

Place superstructure forms or falsework on the substructure only if the substructure concrete has attained a compressive strength of 3,000 psi.

4.1.2. **Removal of Forms and Falsework**. Keep in place weight-supporting forms and falsework for bridge components and culvert slabs until the concrete has attained a compressive strength of 2,500 psi in accordance with Section 420.4.11., "Removal of Forms and Falsework." Keep all forms for mass placements in place for 4 days following concrete placement unless otherwise approved based on the outcome of the heat control plan in accordance with Section 420.4.7.14., "Mass Placements."

4.1.3. **Placement of Superstructure Members**. Erect or place superstructure members or precast substructure members only after the substructure concrete has attained a compressive strength of 3,000 psi.

4.1.4. **Opening to Traffic**. Direct traffic culverts may be opened to construction traffic when the design strength specified in Section 421.4.1., "Classification of Concrete Mix Designs," has been attained if curing is maintained. Obtain approval before opening direct traffic culverts to the traveling public. Open other noncritical structural and nonstructural concrete for service upon the completion of curing unless otherwise specified or directed.

4.1.5. **Post-Tensioned Construction**. Ensure strength requirements shown on the plans for structural elements designed to be post-tensioned are met for stressing and staged loading of structural elements.

4.1.6. **Backfilling**. Backfill in accordance with Section 400.3.3., "Backfill."

4.2. **Plans for Falsework and Forms**. Submit plans for falsework and forms for the following items: vertical forms for piers and single column bents; load supporting forms for caps and tie-beams; form attachments for bridges to be widened; and other items as indicated or directed. Provide design calculations when requested. Show all essential details of proposed forms, falsework, and bracing. Have a licensed professional engineer design, seal, and sign these plans. Department approval is not required, except as shown in Table 1 of

Item 5, “Control of the Work,” when forms or falsework are located such that public safety can be affected, but the Department reserves the right to request modifications to the plans. The Contractor is responsible for the adequacy of these plans. Design job-fabricated formwork assuming a weight of 150 pcf for concrete, and include a live-load allowance of 50 psf of horizontal surface of the form. Do not exceed 125% of the allowable stresses used by the Department for the design of structures.

4.3. **Falsework**. Design and construct falsework to safely carry the maximum anticipated loads, including wind loads, and to provide the necessary rigidity. Consult AASHTO’s *Guide Design Specifications for Bridge Temporary Works* and *Construction Handbook for Bridge Temporary Works* for falsework and shoring information not indicated below. Submit details in accordance with Section 420.4.2., “Plans for Falsework and Forms.”

Design job-fabricated falsework assuming a weight of 150 pcf for concrete, and include a minimum live-load allowance of 50 psf of horizontal surface of the form. Do not exceed 125% of the allowable stresses used by the Department for the design of structures.

Do not exceed the manufacturer’s maximum allowable working loads for moment and shear or end reaction for commercially produced structural units used in falsework. Include a minimum live-load allowance of 35 psf of horizontal form surface in determining the maximum allowable working load for commercially produced structural units.

Provide timber that is sound, in good condition, and free of defects that would impair its strength. Provide timber that meets or exceeds the species, size, and grade requirements shown on the submitted falsework plans.

Provide wedges made of hardwood or metal in pairs to adjust falsework to desired elevations to ensure even bearing. Do not use wedges to compensate for incorrectly cut bearing surfaces.

Use sills or grillages large enough to support the superimposed load without settlement. Take precautions to prevent settling of the supporting material unless the sills or grillages are founded on solid rock, shale, or other hard materials.

Place falsework that cannot be founded on a satisfactory spread footing on piling or drilled shafts with enough bearing capacity to support the superimposed load without settlement. Drive falsework piling to the required resistance determined by the applicable formula in Item 404, “Driving Piling.” Design drilled shafts for falsework to carry the superimposed load using both skin friction and point bearing.

Weld in accordance with Item 448, “Structural Field Welding.” Securely brace each falsework bent to provide the stiffness required, and securely fasten the bracing to each pile or column it crosses.

Remove falsework when it is no longer required or as shown on the submitted falsework plan. Pull or cut off foundations for falsework at least 2 ft. below finished ground level. Completely remove falsework, piling, or drilled shafts in a stream, lake, or bay to the approved limits to prevent obstruction to the waterway.

4.4. **Forms**. Submit formwork plans in accordance with Section 420.4.2., “Plans for Falsework and Forms.”

4.4.1. **General**. Provide forms of either timber or metal except where otherwise specified or permitted.

Design forms for the pressure exerted by a liquid weighing 150 pcf. Take the rate of concrete placement into consideration in determining the depth of the equivalent liquid. Include a minimum live-load allowance of 50 psf of horizontal surface for job-fabricated forms. Do not exceed 125% of the Department’s allowable stresses for the design of structures.

Do not exceed the manufacturer’s maximum allowable working loads for moment and shear or end reaction for commercially produced structural units used for forms. Include a minimum live-load allowance of 35 psf of

horizontal form surface in determining the maximum allowable working load for commercially produced structural units.

Provide steel forms for round columns unless otherwise approved. Refer to Item 427, “Surface Finishes for Concrete,” for additional requirements for off-the-form finishes.

Provide commercial form liners for imprinting a pattern or texture on the concrete surface as shown on the plans and in accordance with Section 427.4.3.5., “Form Liner Finish.”

Provide forming systems that are practically mortar-tight, rigidly braced, and strong enough to prevent bulging between supports, and maintain them to the proper line and grade during concrete placement. Maintain forms in a manner that prevents warping and shrinkage. Do not allow offsets at form joints to exceed 1/16 in.

Use only material that is inert, non-biodegradable, and nonabsorptive for forms to be left in place.

Construct all forms to permit their removal without marring or damaging the concrete. Clean all forms and footing areas of any extraneous matter before placing concrete. Provide openings in forms if needed for the removal of laitance or foreign matter.

Treat the facing of all forms with bond-breaking coating of composition that will not discolor or injuriously affect the concrete surface. Take care to prevent coating of the reinforcing steel.

Complete all preparatory work before requesting permission to place concrete.

Cease placement if the forms show signs of bulging or sagging at any stage of the placement, and remove the portion of the concrete causing this condition immediately as directed. Reset the forms and securely brace them against further movement before continuing the placement.

4.4.2. **Timber Forms**. Provide properly seasoned, good-quality lumber that is free of imperfections that would affect its strength or impair the finished surface of the concrete. Provide timber or lumber that meets or exceeds the requirements for species and grade shown on the submitted formwork plans.

Maintain forms or form lumber that will be reused so it stays clean and in good condition. Do not use any lumber that is split, warped, bulged, or marred, or that has defects in any way that will produce inferior work. Promptly remove such lumber from the work.

Provide form lining for all formed surfaces except:

- the inside of culvert barrels, inlets, manholes, and box girders;
- surfaces that are subsequently covered by backfill material or are completely enclosed; and
- any surface formed by a single finished board or by plywood.

Provide form lining of an approved type such as masonite or plywood. Do not provide thin membrane sheeting such as polyethylene sheets for form lining.

Use plywood at least 3/4 in. thick. Place the grain of the face plies on plywood forms parallel to the span between the supporting studs or joists unless otherwise shown on the submitted form drawings.

Use plywood for forming surfaces that remain exposed that meets the requirements for B-B Plyform Class I or Class II Exterior of the U.S. Department of Commerce Voluntary Product Standard PS 1.

Space studs and joists so the facing form material remains in true alignment under the imposed loads.

Space wales closely enough to hold forms securely to the designated lines, scabbed at least 4 ft. on each side of joints to provide continuity. Place a row of wales near the bottom of each placement.

Place facing material with parallel and square joints, securely fastened to supporting studs.

Place forms with the form panels symmetrical (long dimensions set in the same direction) for surfaces exposed to view and receiving only an ordinary surface finish in accordance with Section 420.4.13., "Ordinary Surface Finish." Make horizontal joints continuous.

Make molding for chamfer strips or other uses of materials of a grade that will not split when nailed and can be maintained to a true line without warping. Dress wood molding on all faces. Fill forms at all sharp corners and edges with triangular chamfer strips measuring 3/4 in. on the sides unless otherwise shown on the plans.

Use metal form ties of an approved type or a satisfactory substitute of a type that permits ease of removal of the metal to hold forms in place. Cut back wire ties at least 1/2 in. from the face of the concrete.

Use devices to hold metal ties in place that can develop the strength of the tie and adjust to allow for proper alignment.

Entirely remove metal and wooden spreaders that separate the forms as the concrete is being placed.

Provide adequate cleanout openings for narrow walls and other locations where access to the bottom of the forms is not readily attainable.

4.4.3. **Metal Forms**. Requirements for timber forms regarding design, mortar tightness, filleted corners, beveled projections, bracing, alignment, removal, reuse, and wetting also apply to metal forms, except metal forms do not require lining unless as specifically shown on the plans.

Use form metal thick enough to maintain the true shape without warping or bulging. Countersink all bolt and rivet heads on the facing sides. Design clamps, pins, or other connecting devices to hold the forms rigidly together and to allow removal without damage to the concrete. Use metal forms that present a smooth surface and line up properly. Keep metal free of rust, grease, and other foreign materials.

4.5. **Drains**. Install and construct weep holes and roadway drains as shown on the plans.

4.6. **Placing Reinforcement and Post-Tensioning**. Place reinforcement in accordance with Item 440. Do not weld reinforcing steel supports to other reinforcing steel except where shown on the plans.

Place post-tensioning ducts, anchorages, and other hardware in conformance with the approved prestressing details and in accordance with Item 426, "Post-Tensioning." Keep ducts free of obstructions until all post-tensioning operations are complete.

4.7. **Placing Concrete**. Give the Engineer sufficient advance notice before placing concrete in any unit of the structure to permit the inspection of forms, reinforcing steel placement, and other preparations.

Do not place concrete when impending weather conditions would impair the quality of the finished work. Place concrete in early morning or at night or adjust the placement schedule for more favorable weather when conditions of wind, humidity, and temperature are such that concrete cannot be placed without the potential for weather-related distress.

Adequately illuminate the entire placement site as approved when mixing, placing, and finishing concrete in non-daylight hours.

Furnish adequate shelter to protect the concrete against damage from rainfall or freezing temperatures in accordance with this Item if changes in weather conditions require protective measures after work starts. Continue operations during rainfall only if approved. Use protective coverings for the material stockpiles. Cover aggregate stockpiles only to the extent necessary to control the moisture conditions in the aggregates.

Allow at least 1 curing day after the concrete has achieved initial set before placing strain on projecting reinforcement to prevent damage to the concrete.

4.7.1. **Placing Temperature**. Place concrete in accordance with the following temperature limits for the classes of concrete defined in Section 421.4.1., "Classification of Concrete Mix Designs."

- Place Class C, F, H, K, or SS concrete only when its temperature at time of placement is between 50°F and 95°F. Increase the minimum placement temperature to 60°F if slag cement is used in the concrete.
- Place Class S concrete, used in this Item only as indicated for culvert top slabs, only when its temperature is between 50°F and 85°F. Increase the minimum placement temperature to 60°F if slag cement is used in the concrete.
- Place Class A, B, and D concrete only when its temperature at the time of placement is greater than 50°F.
- Place mass concrete in accordance with Section 420.4.7.14., "Mass Placements," only when its temperature at the time of placement is between 50°F and 75°F.

4.7.2. **Transporting Time**. Begin the discharge of concrete delivered in truck mixers within the times shown in Table 14 of Item 421.

4.7.3. **Workability of Concrete**. Place concrete with a slump as specified in Section 421.4.2.5., "Slump." Water may be added to the concrete before discharging any concrete from the truck to adjust for low slump, provided that the maximum mix design water-cement ratio is not exceeded. Mix concrete in accordance with Section 421.4.6., "Mixing and Delivering Concrete," after introduction of any additional water or chemical admixtures. Do not add water or chemical admixtures after any concrete has been discharged.

4.7.4. **Transporting Concrete**. Transport concrete by buckets, chutes, buggies, belt conveyors, pumps, or other methods.

Protect concrete transported by conveyors from sun and wind to prevent loss of slump and workability. Shade or wrap with wet burlap pipes through which concrete is pumped as necessary to prevent loss of slump and workability.

Arrange and use chutes, troughs, conveyors, or pipes so the concrete ingredients will not be separated. Terminate such equipment in vertical downspouts when necessary to prevent segregation. Extend open troughs and chutes, if necessary, down inside the forms or through holes left in the forms.

Keep all transporting equipment clean and free of hardened concrete coatings. Discharge water used for cleaning clear of the concrete.

4.7.5. **Preparation of Surfaces**. Thoroughly wet all forms and hardened concrete on which concrete is to be placed before placing concrete on them. Remove any remaining puddles of excess water before placing concrete. Provide surfaces that are in a moist, saturated surface-dry (SSD) condition when concrete is placed on them.

Ensure the subgrade or foundation is moist before placing concrete on grade. Lightly sprinkle the subgrade if dry.

4.7.6. **Expansion Joints**. Construct joints and devices to provide for expansion and contraction as shown on the plans.

Use light wire or nails to anchor any preformed fiber joint material to the concrete on one side of the joint.

Ensure finished joints conform to the plans with the concrete sections completely separated by the specified opening or joint material.

Remove all concrete within the joint opening soon after form removal and again where necessary after surface finishing to ensure full effectiveness of the joint.

4.7.7. **Construction Joints**. A construction joint is the joint formed by placing plastic concrete in direct contact with concrete that has attained its initial set. Monolithic placement means the manner and sequence of concrete placing do not create a construction joint.

Make construction joints of the type and at the locations shown on the plans. Additional joints in other members are not permitted without approval. Place authorized additional joints using details equivalent to those shown on the plans for joints in similar locations.

Make construction joints square and normal to the forms unless otherwise required. Use bulkheads in the forms for all vertical joints.

Thoroughly roughen the top surface of a concrete placement terminating at a horizontal construction joint as soon as practical after initial set is attained.

Thoroughly clean the hardened concrete surface of all loose material, laitance, dirt, and foreign matter, and saturate it with water. Remove all free water and moisten the surface before concrete or bonding grout is placed against it. Ensure the surface of the existing concrete is in an SSD condition just before placing subsequent concrete. Wet the existing concrete by ponding water on the surface for 24 hr. before placing subsequent concrete. Use high-pressure water blasting if ponding is not possible to achieve SSD conditions 15–30 min. before placing the concrete. An SSD condition is achieved when the surface remains damp when exposed to sunlight for 15 min.

Draw forms tight against the existing concrete to avoid mortar loss and offsets at joints.

Bonding agents are not required unless indicated otherwise. Coat the joint surface with bonding mortar, grout, epoxy, or other material if a bonding agent is required as shown on the plans. Provide Type V epoxy in accordance with DMS-6100 for bonding fresh concrete to hardened concrete. Place the bonding epoxy on a clean, dry surface, and place the fresh concrete while the epoxy is still tacky. Place bonding mortar or grout on a surface that is SSD and place the concrete before the bonding mortar or grout dries. Place other bonding agents in conformance with the manufacturer's recommendations.

4.7.8. **Handling and Placing**. Minimize segregation of the concrete and displacement of the reinforcement when handling and placing concrete. Produce a uniform, dense compact mass.

Ensure concrete free falls no more than 5 ft. except in the case of drilled shafts, thin walls such as in culverts, or as allowed in conformance with other Items. Remove any hardened concrete splatter ahead of the plastic concrete.

Fill each part of the forms by depositing concrete as near to its final position as possible. Do not deposit large quantities of concrete at one point and run or move the concrete along to fill the forms.

Deposit concrete in the forms in layers of suitable depth but no more than 36 in. deep unless otherwise permitted.

Avoid cold joints in a monolithic placement. Sequence successive layers or adjacent portions of concrete so they can be vibrated into a homogeneous mass with the previously placed concrete before it sets. Allow no more than 1 hr. to elapse between adjacent or successive placements of concrete when re-vibration of the concrete is shown on the plans, except as otherwise allowed by an approved placing procedure. This time limit may be extended by 1/2 hr. if the concrete contains at least the minimum recommended dosage of a Type B or Type D admixture.

4.7.9. **Consolidation**. Carefully consolidate concrete and flush mortar to the form surfaces using immersion-type vibrators. Do not use vibrators that operate by attachment to forms or reinforcement except where approved on steel forms.

Vibrate the concrete immediately after deposit. Systematically space points of vibration to ensure complete consolidation and thorough working of the concrete around the reinforcement and embedded fixtures, and into the corners and angles of the forms. Insert the vibrators vertically where possible. Vibrate the entire depth of each lift, allowing the vibrator to penetrate several inches into the preceding lift. Do not use the vibrator to move the concrete to other locations in the forms. Do not drag the vibrator through the concrete. Thoroughly consolidate concrete along construction joints by operating the vibrator along and close to but not against the joint surface. Continue the vibration until the concrete surrounding reinforcements and fixtures is completely consolidated. Hand-spade or rod the concrete if necessary to ensure flushing of mortar to the surface of all forms.

4.7.10. **Installation of Dowels and Anchor Bolts**. When shown on the plans, provide an Adhesive Anchor Installer certified by ACI. Install dowels and anchor bolts by casting them in place or by grouting with grout, epoxy, or epoxy mortar unless specified otherwise. Form or drill holes for grouting. Follow the manufacturer's recommended installation procedures for pre-packaged grout or epoxy anchor systems. Test anchors if required on the plans or in conformance with other Items.

Drill holes for anchor bolts to accommodate the bolt embedment required by the plans. Make holes for dowels at least 12 in. deep unless otherwise shown on the plans. Make the hole diameter at least twice the dowel or bolt diameter, but not exceeding the dowel or bolt diameter plus 1-1/2 in. when using cementitious grout or epoxy mortar. Make the hole diameter 1/16–1/4 in. greater than the dowel or bolt diameter when using neat epoxy unless specified otherwise by the epoxy manufacturer.

Thoroughly clean holes of all loose material, oil, grease, or other bond-breaking substance, and blow them clean with filtered compressed air. Use a wire brush followed by oil-free compressed air to remove all loose material from the holes, repeating as necessary until no more material is removed. Ensure holes are in a surface-dry condition when epoxy-type materials are used and in a surface-moist condition when cementitious grout is used. Develop and demonstrate for approval a procedure for cleaning and preparing the holes for installation of the dowels and anchor bolts. Completely fill the void between the hole and dowel or bolt with grouting material. Follow exactly the requirements for cleaning in conformance with the product specifications for pre-packaged systems.

Provide hydraulic cement grout for cast-in-place or grouted systems in accordance with DMS-4675. Provide a Type III epoxy in accordance with DMS-6100 when neat epoxy is used for anchor bolts or dowels. Provide Type VIII epoxy in accordance with DMS-6100 when an epoxy grout is used. Provide grout, epoxy, or epoxy mortar as the binding agent unless otherwise shown on the plans.

Provide other anchor systems as required on the plans.

4.7.11. **Placing Concrete in Cold Weather**. Protect concrete placed under weather conditions where weather may adversely affect results. Permission given by the Engineer for placing during cold weather does not relieve the Contractor of responsibility for producing concrete equal in quality to that placed under normal conditions. Remove and replace concrete as directed at the Contractor's expense if it is determined unsatisfactory due to poor conditions.

Do not place concrete in contact with any material coated with frost or with a temperature of 32°F or lower. Do not place concrete when the ambient temperature in the shade is below 40°F and falling unless approved. Place concrete when the ambient temperature in the shade is at least 35°F and rising or above 40°F.

Provide and install recording thermometers, maturity meters, or other suitable temperature-measuring devices to verify all concrete is effectively protected as follows.

- Maintain the temperature at all surfaces of concrete in bents, piers, culvert walls, retaining walls, parapets, wingwalls, top slabs of non-direct traffic culverts, and other similar formed concrete at or above 40°F for 72 hr. from the time of placement.
- Maintain the temperature of all other concrete, including the bottom slabs (footings) of culverts, placed on or in the ground above 32°F for 72 hr. from the time of placement.

Use additional covering, insulated forms, or other means and, if necessary, supplement the covering with artificial heating. Avoid applying heat directly to concrete surfaces. Cure in accordance with Section 420.4.10., "Curing Concrete," during this period until all requirements for curing have been satisfied.

Have all necessary heating and covering material ready for use before permission is granted to begin placement when impending weather conditions indicate the possible need for temperature protection.

4.7.12. **Placing Concrete in Hot Weather**. Keep the concrete at or below the maximum temperature at time of placement in accordance with Section 420.4.7.1., "Placing Temperature." Sprinkle and shade aggregate stockpiles or use ice, liquid nitrogen systems, or other approved methods as necessary to control the concrete temperature.

4.7.13. **Placing Concrete in Water**. Deposit concrete in water only when shown on the plans or with approval. Make forms or cofferdams tight enough to prevent any water current passing through the space in which the concrete is being deposited. Do not pump water during the concrete placing or until the concrete has set for at least 36 hr.

Place the concrete using a tremie or pump, or use another approved method, and do not allow it to fall freely through the water or disturb it after it is placed. Keep the concrete surface level during placement.

Support the tremie or operate the pump so it can be easily moved horizontally to cover all the work area and vertically to control the concrete flow. Keep the lower end of the tremie or pump hose submerged in the concrete. Use continuous placing operations until the work is complete.

Design the concrete mix in accordance with Item 421 with a minimum cement content of 650 lb. per cubic yard for concrete to be placed under water. Include an anti-washout admixture in the mix design as necessary to produce a satisfactory finished product.

4.7.14. **Mass Placements**. Develop and obtain approval for a heat control plan for monolithic placements designated on the plans as mass concrete to ensure the following during the heat dissipation period:

- the temperature differential between the central core of the placement and the exposed concrete surface does not exceed 35°F and
- the temperature at the central core of the placement does not exceed 160°F.

Use the ConcreteWorks© software available from the Department, or another approved method in accordance with ACI 207, "Mass Concrete," to develop the heat control plan. The Department will make available technical assistance on the use of ConcreteWorks©. Develop the heat control plan using historical temperature ranges for the anticipated time of the mass placement. Re-create the plan if the work schedule shifts by more than one month.

The heat control plan may include a combination of the following elements:

- selection of concrete ingredients including aggregates, gradation, and cement types, to minimize heat of hydration;
- use of ice or other concrete cooling ingredients;
- use of liquid nitrogen dosing systems;
- controlling rate or time of concrete placement;
- use of insulation or supplemental external heat to control heat loss;
- use of supplementary cementing materials;

- use of a cooling system to control the core temperature; or
- vary the duration for which formwork remains in place.

Furnish and install two pairs of temperature-recording devices, maturity meters, or other approved equivalent devices. Install devices to measure the surface temperature no more than 3 in. from the surface. Install devices to measure the core temperature half the least dimension from the nearest surface near the point of maximum predicted heat. Use these devices to simultaneously measure the temperature of the concrete at the core and the surface. Maintain temperature control methods for 4 days unless otherwise approved in conformance with the submitted heat control plan. Do not use maturity meters to predict strength of mass concrete. Revise the heat control plan as necessary to maintain the temperature limitations shown above.

If the core temperature exceeds 160°F, the mass concrete element will be subject to review and acceptance by the Engineer using forensic analyses to determine its potential reduction in service life or performance. Proceed with subsequent construction on the affected element only when notified regarding acceptance. Repair any resulting cracking if the temperature differential between the central core of the placement and the nearest concrete surface exceeds 35°F at no expense to the Department and revise the heat control plan as necessary to prevent further occurrences.

4.7.15. **Placing Concrete in Foundation and Substructure**. Do not place concrete in footings until the depth and character of the foundation have been inspected and permission has been given to proceed.

Place concrete footings upon seal concrete after the cofferdams are free of water and the seal concrete is cleaned. Perform any necessary pumping or bailing during the concreting from a suitable sump located outside the forms.

Construct or adjust all temporary wales or braces inside cofferdams as the work proceeds to prevent unauthorized construction joints.

Omit forms when footings can be placed in a dry excavation without the use of cofferdams, if approved, and fill the entire excavation with concrete to the elevation of the top of footing.

Place concrete in columns monolithically between construction joints unless otherwise directed. Columns and caps or tie beams supported on them may be placed in the same operation or separately. Allow for settlement and shrinkage of the column concrete, if placed in the same operation, by placing it to the lower level of the cap or tie beam, and delay placement between 1 hr. and 2 hr. before proceeding with the cap or tie beam placement.

4.7.16. **Placing Concrete in Box Culverts**. Allow between 1 hr. and 2 hr. to elapse where the top slab and walls are placed monolithically in culverts more than 4 ft. in clear height before placing the top slab to allow for settlement and shrinkage in the wall concrete.

Accurately finish the footing slab at the proper time to provide a smooth, uniform surface. Finish top slabs that carry direct traffic in accordance with Item 422, “Concrete Superstructures.” Give top slabs of fill-type culverts a float finish.

4.8. **Extending Existing Substructures**. Verify pertinent dimensions and elevations of the existing structure before ordering any required materials.

4.8.1. **Removal**. Remove portions of the existing structure to the lines and dimensions shown on the plans or as directed. Dispose of these materials as shown on the plans or as directed. Repair any portion of the remaining structure damaged by the construction.

Do not use explosives to remove portions of the existing structure unless approved in writing. Do not use a demolition ball, other swinging weight, or impact equipment unless shown on the plans. Use pneumatic or hydraulic tools for final removal of concrete at the “break” line. Use removal equipment, as approved, that will not damage the remaining concrete.

4.8.2. **Reuse of Removed Portions of Structure**. Detach and remove all portions of the old structure that are to be incorporated into the extended structure to the lines and details as shown on the plans or as directed. Move the unit to be reused to the new location specified using approved methods. Place the reinforcement and extension concrete as shown on the plans.

4.8.3. **Splicing Reinforcing Steel**. Splice new reinforcing bars to exposed bars in the existing structure using lap splices in accordance with Item 440, unless otherwise shown on the plans. The new reinforcing steel does not need to be tied to the existing steel where spacing or elevation does not match that of the existing steel, provided the lap length is attained. Weld in accordance with Item 448 when welded splices are permitted. Install any required dowels in accordance with Section 420.4.7.10., "Installation of Dowels and Anchor Bolts."

4.8.4. **Concrete Preparation**. Roughen and clean concrete surfaces that are in contact with new construction before placing forms. Prepare these construction joint surfaces in accordance with Section 420.4.7.7., "Construction Joints."

4.9. **Treatment and Finishing of Horizontal Surfaces**. Strike off to grade and finish all unformed upper surfaces. Do not use mortar topping for surfaces constructed under this Section.

Float the surface with a suitable float after the concrete has been struck off.

Slope the tops of caps and piers between bearing areas from the center slightly toward the edge, and slope the tops of abutment and transition bent caps from the backwall to the edge, as directed, so water drains from the surface. Give the concrete a smooth trowel finish. Construct bearing areas for steel units in accordance with Section 441.3.11.6., "Bearing and Anchorage Devices." Give the bearing area under the expansion ends of concrete slabs and slab and girder spans a steel-trowel finish to the exact grades required. Give bearing areas under elastomeric bearing pads or nonreinforced bearing seat buildups a textured, wood float finish. Do not allow the bearing area to vary from a level plane more than 1/16 in. in all directions.

Cast bearing seat buildups or pedestals for concrete units integrally with the cap or a construction joint. Provide a latex-based mortar, an epoxy mortar, or an approved proprietary bearing mortar for bearing seat buildups cast with a construction joint. Mix mortars in conformance with the manufacturer's recommendations. Construct pedestals of Class C concrete, reinforced as shown on the plans or as indicated in Figure 1 and Figure 2. The Engineer of Record will design pedestals higher than 12 in.

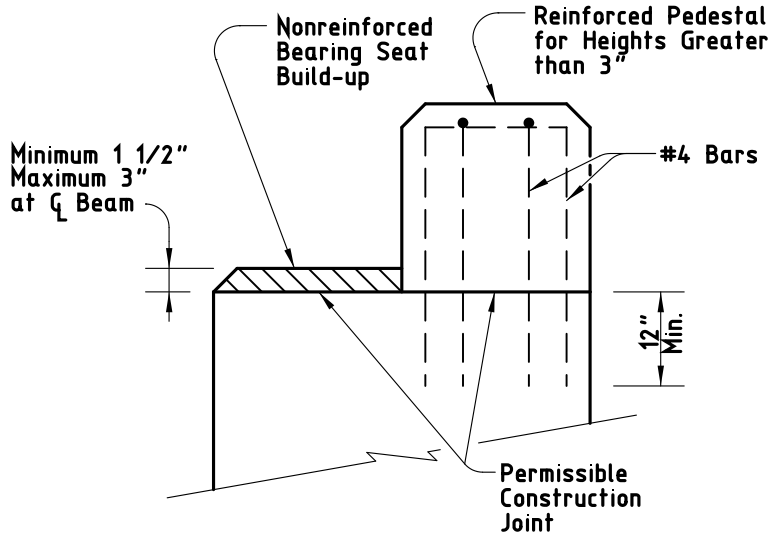

Figure 1
Section Through Bearing Seat Buildups

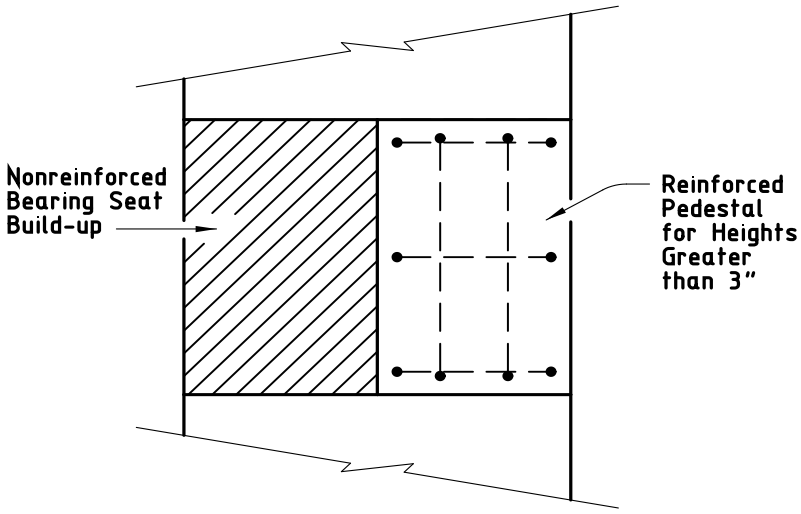

Figure 2
Plan View of Bearing Seat Buildups

4.10. **Curing Concrete**. Obtain approval of the proposed curing methods, equipment, and materials before placing concrete. The Engineer may require the same curing methods for like portions of a single structure. Inadequate curing or facilities may delay all concrete placements on the project until remedial action is taken.

A curing day is a calendar day when the temperature, taken in the shade away from artificial heat, is above 50°F for at least 19 hr. or, on colder days if the temperature of all surfaces of the concrete is maintained above 40°F, for the entire 24 hr. The required curing period begins when all concrete has attained its initial set unless specified otherwise. Tex-440-A may be used to determine when the concrete has attained its initial set.

Cure all concrete for 4 consecutive days except as allowed for the curing options listed below. Use form or membrane curing for vertical surfaces unless otherwise approved. Use only water curing for horizontal surfaces of high-performance concrete (HPC) or mass concrete. Use water or membrane curing for horizontal or unformed surfaces for all other concrete.

Use one of the following curing options for vertical surfaces, unless specified otherwise.

- Form cure for 48 hr. after placement.
- Form cure for 12 hr. after placement followed by membrane curing.
- For HPC, form cure for 48 hr. after placement followed by membrane curing.
- For mass concrete, form cure in conformance with the heat control plan followed by membrane curing if forms are removed before 4 days.

Apply membrane curing, if used, within 2 hr. of form removal.

Use only water curing in accordance with this Section for the top surface of any concrete unit upon which concrete is to be placed and bonded at a later interval (e.g., stub walls, caps with backwalls, and risers).

Cure all other concrete in conformance with the pertinent Items. Use the following methods for curing concrete in accordance with this Item.

4.10.1. **Form Curing**. When forms are left in intimate contact with the concrete, other curing methods are not required except for exposed surfaces and for cold weather protection. Use another approved curing method if forms are removed before the 4-day required curing period.

4.10.2. **Water Curing**. Keep all exposed surfaces of the concrete wet continuously for the required curing time. Use water curing in accordance with concrete mixing water in Section 421.2.5., "Water." Do not use seawater or water that stains or leaves an unsightly residue.

4.10.2.1. **Blankets**. Keep the concrete continuously wet by maintaining wet cotton or burlap mats in direct contact with the concrete for the required curing time. Weight the mats adequately to provide continuous contact with all concrete. Cover surfaces that cannot be cured by direct contact with mats, forming an enclosure well anchored to the forms or ground so outside air cannot enter the enclosure. Provide sufficient moisture inside the enclosure to keep all surfaces of the concrete wet.

4.10.2.2. **Water Spray**. Overlap sprays or sprinklers to keep all unformed surfaces continuously wet.

4.10.2.3. **Ponding**. Cover the surfaces with at least 2 in. of clean granular material, always kept wet, or at least 1 in. of deep water. Use a dam to retain the water or saturated granular material.

4.10.3. **Membrane Curing**. Choose either Type 1-D or Type 2 membrane-curing compound unless otherwise shown on the plans. Use the same type of curing compound on an individual member.

Apply membrane curing just after free moisture has disappeared at a rate of approximately 180 sq. ft. per gallon. Do not spray curing compound on projecting reinforcing steel or concrete that will later form a construction joint. Do not apply membrane curing to dry surfaces. Dampen formed surfaces and surfaces that have been given a first rub, so they are moist at the time of application of the membrane.

Leave the film unbroken for the minimum curing period specified when membrane is used for complete curing. Correct damaged membrane immediately by reapplication of membrane. Polyethylene sheeting, burlap-polyethylene mats, or laminated mats in close contact with the concrete surfaces are equivalent to membrane curing.

4.11. **Removal of Forms and Falsework**. Remove forms for vertical surfaces after the concrete has aged at least 12 hr. after initial set, provided the removal can be done without damage to the concrete, unless otherwise directed. Keep forms for mass placements in place for 4 days following concrete placement unless otherwise approved based on the outcome of the heat control plan in accordance with Section 420.4.7.14., "Mass Placements."

Leave in place weight-supporting forms and falsework spanning more than 1 ft. for all bridge components and culvert slabs except as directed otherwise until the concrete has attained a compressive strength of 2,500 psi. Remove forms for other structural components as necessary.

Remove inside forms (walls and top slabs) for box culverts and sewers after concrete has attained a compressive strength of 1,800 psi if an approved overhead support system is used to transfer the weight of the top slab to the walls of the box culvert or sewer before removal of the support provided by the forms.

Forms or parts of forms may be removed only if constructed to permit removal without disturbing forms or falsework required to be left in place for a longer period on other portions of the structure.

Remove all metal appliances used inside forms for alignment to a depth of at least 1/2 in. from the concrete surface. Make the appliances so metal may be removed without undue chipping or spalling of the concrete, and so it leaves a smooth opening in the concrete surface when removed. Do not burn off rods, bolts, or ties.

Remove all forms and falsework unless otherwise directed.

4.12. **Defective Work**. Repair defective work as soon as possible. Remove and replace at the expense of the Contractor any defect that cannot be repaired to the satisfaction of the Engineer.

4.13. **Ordinary Surface Finish**. Apply an ordinary surface finish to all concrete surfaces. Provide surfaces with uniform appearance. Address defects and surface irregularities not consistent with the intent of the expected finish by the following:

- Chip away all loose or broken material to sound concrete where porous, spalled, or honeycombed areas are visible after form removal.
- Repair spalls in accordance with the *Concrete Repair Manual* available on the Department's website.
- Clean and fill holes or spalls caused by the removal of metal appliances used inside forms, with latex grout, cement grout, or epoxy grout as approved. Do not blend the patch with the surrounding concrete.
- Remove all fins, rust staining, runs, drips, or mortar from surfaces that will be exposed. Smooth all form marks and chamfer edges by grinding or dry-rubbing.
- Ensure all repairs are dense, well-bonded, and properly cured. Finish exposed large repairs to blend with the surrounding concrete where a higher class of finish is not specified.

Apply an ordinary surface finish as the final finish to the following exposed surfaces unless specified otherwise:

- inside and top of inlets,
- inside and top of manholes,
- inside of sewer appurtenances, and
- inside of culvert barrels.

Form marks and chamfer edges do not need to be smoothed for the inside of culvert barrels.

5. MEASUREMENT

This Item will be measured by the cubic yard, square yard, foot, square foot, or each structure.

5.1. **General**. Concrete quantities will be based on the dimensions shown on the plans or those established in writing by the Engineer.

In determining quantities, no deductions will be made for chamfers less than 2 in. or for embedded portions of steel or prestressed concrete beams, piling, anchor bolts, reinforcing steel, drains, weep holes, junction boxes, electrical or telephone conduit, ducts and voids for prestressed tendons, or embedded portions of light fixtures.

Variation in concrete headwall quantity incurred when an alternate bid for pipe is permitted will not be cause for payment adjustment.

Quantities revised by a change in design, measured as specified, will be increased or decreased and included for payment.

5.2. **Plans Quantity**. Structure elements shown in Table 1 and measured by the cubic yard are plans quantity measurement items. The quantity to be paid for plans quantity items is the quantity shown in the proposal, unless modified by Article 9.2., "Plans Quantity Measurement." Additional measurements or calculations will be made if adjustments of quantities are required.

No adjustment will be made for footings or other in-ground elements where the Contractor has been allowed to place concrete in an excavation without forms.

Table 1
Plans Quantity Payment
(Cubic Yard Measurement Only)

Culverts and culvert wing walls	Abutments
Headwalls for pipe	Footings
Retaining walls	Pile bent caps
Inlets and manholes	Post-tensioned elements

Note—Other elements, including pier and bent concrete, may be paid for as "plans quantity" when shown on the plans.

5.3. **Measured in Place**. Items not paid for as "plans quantity" will be measured in place.

6. PAYMENT

The work performed and materials furnished in accordance with this Item and measured as provided under "Measurement" will be paid for at the unit price bid for the class of concrete and element identified and by the special designation when appropriate. This price is full compensation for furnishing, hauling, and mixing concrete materials; furnishing, bending, fabricating, splicing, welding, and placing the required reinforcement; clips, blocks, metal spacers, ties, wire, or other materials used for fastening reinforcement in place; placing, finishing, and curing concrete; mass placement controls; applying ordinary surface finish; installing bridge identification numbers; furnishing and placing drains, metal flashing strips, and expansion joint material; excavation; subgrade preparation; and forms and falsework, and for equipment, labor, tools, and incidentals.

Price will be adjusted in accordance with Article 421.6., "Measurement and Payment," when required to address non-compliance of project acceptance testing.

Design and installation of foundations for falsework are at the Contractor's expense.

In addition to the work described above, for extending structures the unit prices bid for the various classifications of concrete shown are full compensation for removing and disposing of, if necessary, the designated portion of the existing structure; removing, stockpiling if necessary, and replacing headwall units for reuse; cleaning, bending, and cutting of exposed reinforcing steel; splicing of new reinforcing steel to existing reinforcing steel; installation of dowels; and cleaning and preparing existing concrete surfaces.

Item 421
Hydraulic Cement Concrete

1. DESCRIPTION

Furnish hydraulic cement concrete for concrete pavements, concrete structures, and other concrete construction.

2. MATERIALS

Use materials from prequalified sources listed on the Department website. Provide aggregates from sources listed in the Department's Concrete Rated Source Quality Catalog (CRSQC). Use materials from non-listed sources only when tested and approved before use. Allow 30 calendar days for the Engineer to sample, test, and report results for non-listed sources. Do not combine approved material with unapproved material.

2.1. **Cement**. Furnish cement in accordance with DMS-4600, "Hydraulic Cement."

2.2. **Supplementary Cementitious Materials (SCMs)**.

- **Coal Ash**. Furnish sources of fly ash, modified fly ash (MFA), harvested coal ash (HCA), and ground bottom ash (GBA) in accordance with DMS-4610, "Coal Ash."
- **Slag Cement**. Furnish slag cement in accordance with DMS-4620, "Slag Cement."
- **Silica Fume**. Furnish silica fume in accordance with DMS-4630, "Silica Fume."
- **Natural Pozzolans**. Furnish natural pozzolans in accordance with DMS-4635, "Natural Pozzolans."

2.3. **Cementitious Material.** Cementitious materials are the cement and SCMs used in concrete.

2.4. **Chemical Admixtures**. Furnish admixtures in accordance with DMS-4640, "Chemical Admixtures for Concrete."

2.5. **Water**. Furnish mixing and curing water that is free of oils, acids, organic matter, or other deleterious substances. Water from municipal supplies approved by the Texas Department of Health will not require testing. Provide test reports showing compliance with Table 1 before use when using water from other sources.

Water that is a blend of concrete wash water and other acceptable water sources, certified by the concrete producer as complying with the requirements shown in Table 1 and Table 2, may be used as mix water. Test the blended water weekly for 4 weeks for compliance with Table 1 and Table 2 or provide previous test results. Then test every month for compliance. Provide water test results upon request.

Do not use mix water that has an adverse effect on the air-entraining agent, on any other chemical admixture, or on strength or time of set of the concrete. Use mixing and curing water free of iron and other impurities that may cause staining or discoloration when using white hydraulic cement.

Table 1
Chemical Limits for Mix Water

Contaminant	Test Method	Max Concentration (ppm or mg\L)
Chloride (Cl)	ASTM C114[1]	
Prestressed concrete		500
Bridge decks & superstructure		500
All other concrete		1,000
Sulfate (SO4)	ASTM C114[1]	2,000
Alkalis (Na2O + 0.658K2O)	ASTM C114[1]	600
Total solids	ASTM C1603	50,000

1. ASTM C114 includes reference and alternative test methods to measure the concentration of chlorides, sulfates, and alkalis in solutions prepared from dissolving cementitious materials. Use the applicable Test Methods in C114 to measure these constituents. The laboratory performing these tests is not required to conform to the method qualification requirements of Test Methods C114. Alternative instrumental and wet chemistry methods not listed in Test Methods C114 that measure the concentration of these chemical species in solution are permitted. When alternative methods are used, the test method used will be included in the report.

Table 2
Acceptance Criteria for Questionable Water Supplies

Property	Test Method	Limits
Compressive strength, Min % control at 7 days	ASTM C31, ASTM C39[1,2]	90
Time of set, deviation from control, h:min.	ASTM C403	From 1:00 early to 1:30 later

1. Base comparisons on fixed proportions and the same volume of test water compared to the control mix using 100% potable water or distilled water.
2. Base comparisons on sets consisting of at least two standard specimens made from a composite sample.

2.6. **Aggregate**.

2.6.1. **Coarse Aggregate**. Provide coarse aggregate consisting of durable particles of gravel, crushed blast furnace slag, recycled crushed hydraulic cement concrete, crushed stone, or combinations that are free of frozen material and injurious amounts of salt, alkali, vegetable matter, or other objectionable material, either free or as an adherent coating. Provide coarse aggregate of uniform quality throughout.

Provide coarse aggregate with the requirements shown in Table 3 unless otherwise shown on the plans.

Table 3
Coarse Aggregate Requirements

Description	Test Method	Limit
Weight of clay lumps, % Max	Tex-413-A	0.25
Weight of shale, % Max		1.0
Weight of laminate and friable particle, % Max		5.0
L.A. abrasion wear, % Max	Tex-410-A	40
5-cycle magnesium sulfate soundness,[1,2] non-air-entrained concrete, % Max	Tex-411-A	25
5-cycle magnesium sulfate soundness,[1,3], air-entrained concrete, % Max		18
Loss by decantation, % Max	Tex-406-A	1.5

1. Recycled crushed hydraulic cement concrete is not subject to 5-cycle magnesium sulfate soundness requirements.
2. Allowed when air-entrained concrete is used at the Contractor's option.
3. Only when air-entrained concrete is required by the plans.

Increase the loss by decantation limit to 3.0% for all classes of concrete and 5.0% for Class A, B, and P if the material finer than the No. 200 sieve is determined to be at least 85% calcium carbonate in accordance with Tex-406-A, Part III, in the case of coarse aggregates made primarily from crushing stone, unless otherwise shown on the plans. Provide test results upon request.

Provide coarse aggregate or combination of aggregates conforming to the gradation requirements shown in Table 4 when tested in accordance with Tex-401-A unless otherwise specified.

Table 4
Coarse Aggregate Gradation Chart

Aggregate Grade No.[1]	Maximum Nominal Size	Percent Passing on Each Sieve								
		2-1/2"	2"	1-1/2"	1"	3/4"	1/2"	3/8"	#4	#8
1	2"	100	80–100	50–85	–	20–40	–	–	0–10	–
2	1-1/2"	–	100	95–100	–	35–70	–	10–30	0–10	–
3	1-1/2"	–	100	95–100	–	60–90	25–60	–	0–10	–
4 (57)	1"	–	–	100	95–100	–	25–60	–	0–10	0–5
5 (67)	3/4"	–	–	–	100	90–100	–	20–55	0–10	0–5
6 (7)	1/2"	–	–	–	–	100	90–100	40–70	0–15	0–5
7	3/8"	–	–	–	–	–	100	70–95	0–25	–
8	3/8"	–	–	–	–	–	100	95–100	20–65	0–10

1. Corresponding ASTM C33 gradation shown in parentheses.

2.6.2. **Fine Aggregate**. Provide fine aggregate consisting of clean, hard, durable particles of natural, manufactured sand; recycled crushed hydraulic cement concrete; slag; lightweight aggregate; or a combination thereof. Provide fine aggregate free of frozen material and injurious amounts of salt, alkali, vegetable matter, or other objectionable material.

Provide fine aggregates in accordance with Table 5 unless otherwise shown on the plans.

Table 5
Fine Aggregate Requirements

Description	Test Method	Limit
Weight of clay lumps, % Max	Tex-413-A	0.50
Organic impurities[1]	Tex-408-A	Color not darker than standard
Sand equivalent, Min	Tex-203-F	80
Fineness modulus	Tex-402-A	2.3–3.1

1. Only when air-entrained concrete is specified.

Provide fine aggregate or combinations of aggregates conforming to the gradation requirements shown in Table 6 when tested in accordance with Tex-401-A unless otherwise specified.

Table 6
Fine Aggregate Gradation Chart (Grade 1)

Sieve Size	% Passing
3/8"	100
#4	95–100
#8	80–100
#16	50–85
#30	25–65
#50	10–35[1]
#100	0–10
#200	0–3[2]

1. 6–35 when sand equivalent value is greater than 85.
2. 0–6 for manufactured sand.

2.6.3. **Intermediate Aggregate**. Provide intermediate aggregate consisting of clean, hard, durable particles of natural, manufactured sand; slag; recycled crushed hydraulic cement concrete; lightweight aggregate; or a combination thereof when optimized aggregate gradation (OAG) concrete is specified or when used at the Contractor's option. Provide intermediate aggregate free of frozen material and injurious amounts of salt, alkali, vegetable matter, or other objectionable material.

Provide intermediate aggregate in accordance with Table 7.

Table 7
Intermediate Aggregate Requirements

Description	Test Method	Limit
Weight of clay lumps, % Max	Tex-413-A	0.50
L.A. abrasion wear,[1] % Max	Tex-410-A	40
5-cycle magnesium sulfate soundness,[1,2,3], non-air-entrained concrete, % Max	Tex-411-A	25
5-cycle magnesium sulfate soundness,[1,2,4], air-entrained concrete, % Max		18
Organic impurities[5]	Tex-408-A	Color not darker than standard
Loss by decantation,[1] % Max	Tex-406-A	1.5

1. Applies only to the portion retained on the No. 4 sieve, if more than 30% of the intermediate aggregate is retained on the No. 4 sieve.
2. Recycled crushed hydraulic cement concrete is not subject to 5-cycle magnesium sulfate soundness requirements.
3. Allowed when air-entrained concrete is used at the Contractor's option.
4. Only when air-entrained concrete is required by the plans.
5. Applies only to the portion passing the 3/8-in. sieve, if more than 30% of the intermediate aggregate is passing the 3/8-in. sieve.

For the portion retained on the No. 4 sieve, if more than 30% of the intermediate aggregate is retained on the No. 4 sieve, and in the case of aggregates made mainly from crushing stone, unless otherwise shown on the plans, the loss by decantation may be increased to 3.0% for all classes of concrete and 5.0% for Class A, B, and P if the material finer than the No. 200 sieve is determined to be at least 85% calcium carbonate in accordance with Tex-406-A, Part III. Provide test results upon request.

2.7. **Mortar and Grout**. Furnish pre-packaged grouts in accordance with DMS-4675, "Cementitious Grouts and Mortars for Miscellaneous Applications," when specified for applications other than post-tension grouting.

When grouting or mortaring stone riprap is shown on the plans, provide mortar and grout consisting of one part hydraulic cement, two parts sand, and sufficient water to provide the desired consistency. Other mix proportions allowed as approved. Provide mortar with a consistency such that the mortar can be easily handled and spread by trowel. Provide grout of a consistency that will flow into and completely fill all voids.

Section 421.4.2.6., "Mix Design Options," does not apply for mortar and grout.

2.8. **Storage of Materials**.

2.8.1. **Cement and Supplementary Cementitious Materials**. Store all cement and supplementary cementitious materials in weatherproof enclosures that will protect the materials from dampness or absorption of moisture.

When permitted, small quantities of packaged cementitious material may be stored in the open, on a raised platform, and under waterproof covering for up to 48 hr.

2.8.2. **Aggregates**. Handle and store concrete aggregates in a manner that prevents contamination by foreign materials. Clear and level the sites for the stockpiles of all vegetation if the aggregates are stored on the ground, and do not use the bottom 6-in. layer of aggregate without cleaning the aggregate before use.

Maintain separate stockpiles and prevent intermixing when conditions require the use of two or more grades of coarse aggregates. Separate the stockpiles using physical barriers where space is limited. Store aggregates from different sources in different stockpiles unless the Engineer authorizes pre-blending of the aggregates. Minimize segregation in stockpiles. Remix and test stockpiles when segregation is apparent.

Sprinkle stockpiles to control moisture and temperature as necessary. Maintain reasonably uniform moisture content in aggregate stockpiles.

2.8.3. **Chemical Admixtures**. Store admixtures in conformance with manufacturer's recommendations in tanks that are clearly labeled and prevent admixtures from freezing.

3. EQUIPMENT

3.1. **Concrete Plants and Mixing Equipment**. Except for volumetric stationary plant or truck (auger) mixers, each plant and truck mixer must be certified by NRMCA or have an inspection report signed and sealed by a licensed professional engineer showing concrete measuring, mixing, and delivery equipment meets all requirements of ASTM C94. A new certification or signed and sealed report is required every time a plant is moved. Plants with a licensed professional engineer's inspection require re-inspection every 2 yr. Provide a copy of the certification or the signed and sealed inspection report to the Engineer. Remove equipment or facilities from service until corrected when they fail to meet specification requirements.

When allowed as shown on the plans or by the Engineer, for concrete classes not identified as structural concrete in Table 8 or for Class C concrete not used for bridge-class structures, the Engineer may inspect and approve all plants and trucks instead of NRMCA or non-Department engineer-sealed certifications. The criteria and frequency of Engineer approval of plants and trucks are the same used for NRMCA certification.

Inspect and furnish inspection reports of the condition of blades and fins and their percent wear from the original manufacturer's design for all mixing and agitating equipment annually. Repair mixing equipment exhibiting 10% or more wear before use. If an inspection within 12 mo. is not practical, a 2-mo. grace period (for a maximum of 14 mo. between inspections) is permitted.

3.1.1. **Scales**. Check all scales before beginning of operations, after each move, or whenever their accuracy or adequacy is questioned, and at least once every 6 mo. Immediately correct deficiencies, and recalibrate. Provide a record of calibration showing scales in compliance with ASTM C94 requirements. Check batching accuracy of volumetric water batching devices at least every 90 days. Check batching accuracy of chemical admixture dispensing devices at least every 6 mo. Perform daily checks as necessary to ensure measuring accuracy. Check electronic aggregate moisture probes at least every 90 days in accordance with Tex-409-A, and be accurate to within 1.0% of the actual moisture content.

3.1.2. **Volumetric Mixers**. Provide volumetric mixers with rating plates defining the capacity and the performance of the mixer in accordance with the Volumetric Mixer Manufacturers Bureau or equivalent. Provide volumetric mixers that comply with ASTM C685. Provide test data showing mixers meet the uniformity test requirements in accordance with Tex-472-A.

Unless allowed on the plans or by the Engineer, volumetric truck (auger) mixers may not supply classes of concrete identified as structural concrete in Table 8.

3.1.3. **Agitators and Truck and Stationary Mixers**. Provide stationary and truck mixers capable of combining the ingredients of the concrete into a thoroughly mixed and uniform mass and capable of discharging the concrete so that the requirements of Tex-472-A are met.

Perform concrete uniformity tests on mixers or agitators in accordance with Tex-472-A as directed, to resolve issues of mix uniformity and mixer performance.

Perform the mixer or agitator uniformity test at the full rated capacity of the equipment. Remove all equipment that fails the uniformity test from service.

Inspect and maintain mixers and agitators. Keep them free of concrete buildup, and repair or replace worn or damaged blades or fins.

Ensure all mixers have a plate affixed showing manufacturer's recommended operating speed and rated capacity for mixing and agitating.

Truck mixers with automated water and chemical admixture measurement and slump and slump flow monitoring equipment meeting the requirement of ASTM C94 will be allowed. Provide data every 6 mo. substantiating the accuracy of slump, slump flow, temperature, water, and chemical admixture measurements. The slump measured by the automated system must be within 1 in. of the slump measured

in accordance with Tex-415-A. The concrete temperature measured by the automated system must be within 1°F of concrete temperature measured in accordance with Tex-422-A. The Engineer will not use the automated measurements for acceptance.

3.2. **Hauling Equipment**. Provide hauling equipment capable of maintaining the mixed concrete in a thoroughly mixed and uniform mass and discharging the concrete with a satisfactory degree of uniformity.

Provide equipment with smooth, mortar-tight metal containers equipped with gates that prevent accidental discharge of the concrete when using non-agitating equipment for transporting concrete.

Maintain hauling equipment clean and free of built-up concrete.

3.3. **Testing Equipment**. Provide strength-testing equipment when required in accordance with the Contract controlling test unless shown otherwise. Provide calibration records of strength-testing equipment to the Engineer within 1 week after each calibration. Furnish and maintain the following in conformance with the pertinent test procedure unless otherwise shown on the plans or specified.

- Test molds
- Curing facilities
- Maturity meters if used
- Wheelbarrow or other container acceptable for the sampling of the concrete

4. CONSTRUCTION

4.1. **Classification of Concrete Mix Designs**. Provide classes of concrete meeting the requirements shown in Table 8.

A higher-strength class of concrete with equal or lower water-to-cementitious material (w/cm) ratio may be substituted for the specified class of concrete when approved.

4.2. **Mix Design Proportioning**. Furnish mix designs using ACI 211, Tex-470-A, or other approved procedures for the classes of concrete shown in Table 8 unless a design method is shown on the plans. Perform mix design proportioning by absolute volume method unless otherwise approved. Perform cement replacement using equivalent weight method unless otherwise approved.

Do not exceed the maximum w/cm ratio shown in Table 8 when designing the mixture.

4.2.1. **Cementitious Materials**. Do not exceed 700 lb. of cementitious material per cubic yard of concrete unless otherwise specified or approved.

- Use cement of the same type and from the same source for monolithic placements, unless otherwise approved.
- Do not use SCMs when white hydraulic cement is specified.

4.2.2. **Aggregates**. Recycled crushed hydraulic cement concrete may be used as a coarse or fine aggregate in Class A, B, E, and P concrete. Limit recycled crushed concrete fine aggregate to at most 20% of the fine aggregate.

Use light-colored aggregates when white hydraulic cement is specified.

Table 8
Concrete Classes

Class of Concrete	Design Strength[1], Min f'_c (psi)	Max w/cm Ratio	Cement Types	Mix Design Options	Exceptions to Mix Design Options	General Use[2]
A	3,000	0.60	I, II, I/II, IL, IP, IS, IT, V	1, 2, 4, and 7	When the cementitious material content does not exceed 520 lb./cu. yd.., any coal ash or natural pozzolan listed in the MPL may be used at a cement replacement of 20%–50%. Limit the alkali loading to 4.0 lb./cu. yd. or less when using Option 7.	Curb, gutter, curb and gutter, concrete retards, sidewalks, driveways, backup walls, anchors, non-reinforced drilled shafts
B	2,000	0.60				Riprap, traffic signal controller foundations, small roadside signs, anchors
C[3]	3,600	0.45	I, II, I/II, IP, IL, IS, IT, V	1–8	N/A	Drilled shafts, bridge substructure, traffic rail, culverts except top slab of direct traffic culverts, headwalls, wing walls, inlets, manholes, traffic barrier
E	3,000	0.50	I, II, I/II, IL, IP, IS, IT, V	1–8	When the cementitious material content does not exceed 520 lb./cu. yd., any coal ash or natural pozzolan listed on the MPLs may be used at a cement replacement of 20%–50%. Limit the alkali loading to 4.0 lb./cu. yd. or less when using Option 7.	Seal concrete
F[3]	Note[4]	0.45	I, II, I/II, IP, IL, IS, IT, V		N/A	Railroad structures; occasionally for bridge piers, columns, bents, post-tension members
H[3]	Note[4]	0.45	I, II, I/II, III, IP, IL, IS, IT, V	1–4, 8	Mix design Options 1–8 allowed for cast-in-place concrete and the following precast elements unless otherwise shown on the plans. ■ Bridge deck panels ■ Retaining wall systems ■ Coping ■ Sound walls ■ Wall columns ■ Traffic rail ■ Traffic barrier ■ Long/arch-span culverts ■ Precast concrete products in accordance with Item 462, 464, and 465 Do not use Type III cement in mass placement concrete.	Precast concrete, post-tension members
S[3]	4,000	0.45	I, II, I/II, IP, IL, IS, IT, V	1–8	N/A	Bridge slabs, top slabs of direct traffic culverts, approach slabs
P	See Item 360, "Concrete Pavement."	0.50	I, II, I/II, IL, IP, IS, IT, V	1–8	When the cementitious material content does not exceed 520 lb./cu. yd., any coal ash or natural pozzolan on the MPLs may be used at a cement replacement of 20%–50%.	Concrete pavement

Class of Concrete	Design Strength[1], Min f'_c (psi)	Max w/cm Ratio	Cement Types	Mix Design Options	Exceptions to Mix Design Options	General Use[2]
CO[3]	4,600	0.40	I, II, I/II, IP, IL, IS, IT, V	1–8	N/A	Bridge deck concrete overlay
LMC[3]	4,000	0.40				Latex-modified concrete overlay
SS[3]	3,600	0.45		1–8	Use a minimum cementitious material content of 658 lb./cu. yd. of concrete. Limit the alkali loading to 4.0 lb. per cubic yard or less when using Option 7.	Slurry displacement shafts, underwater drilled shafts
K[3]	Note[4]	0.40	I, II, I/II, III, IP, IL, IS, IT, V	1–8	N/A	Bridge repair
HES	Note[4]	0.45	I, IL, II, I/II, III	N/A	Mix design options do not apply. Limit of 700 lb. of cementitious material per cubic yard is not pertinent.	Concrete pavement, concrete pavement repair
"X" (HPC)[3,5,6]	Note[7]	0.45	I, II, I/II, III, IP, IL, IS, IT, V	1–4, and 8	N/A	N/A
"X" (SRC)[3,5,6]	Note[7]	0.45	I/II, II, IP, IL (MS or HS), IS, IT (MS or HS), V	1–4, and 7	When using coal ash, use only coal ashes allowed for SRC in accordance with the coal ash MPL. Type III-MS may be used where allowed. Type I, Type IL, and Type III cements may be used when natural pozzolans are used or when coal ashes allowed for SRC in accordance with the coal ash MPL are used, and with a Max w/cm of 0.40. Use Option 7 for precast concrete where allowed.	N/A

1. Design strength must be attained within 56 days.
2. For information only.
3. Structural concrete classes.
4. As shown on the plans or specified.
5. "X" denotes class of concrete as shown on the plans or specified.
6. (HPC): High Performance Concrete, (SRC): Sulfate Resistant Concrete.
7. Same as class of concrete as shown on the plans.

4.2.2.1. **Coarse Aggregate**. Use Grade 2 or 3 coarse aggregate for Class P concrete. Use Grade 8 aggregate in extruded curbs unless otherwise approved. Unless otherwise specified, do not use Grade 1 aggregate in drilled shafts. Use coarse aggregate grades for all other classes of concrete with a maximum nominal size no larger than:

- 1/5 the narrowest dimension between sides of forms;
- 1/3 the depth of slabs;
- 2/3 the minimum clear spacing between individual reinforcing bars or wire, bundles of bars, individual tendons, bundles of tendons, or ducts for cast-in-place concrete; or
- 3/4 the minimum clear spacing between individual reinforcing bars or wires, bundles of bars, individual tendons, bundled tendons, or ducts for precast concrete.

4.2.2.2. **Fine Aggregate**. Use fine aggregate with an acid insoluble residue of at least 60% by weight when tested in accordance with Tex-612-J in all concrete subject to direct traffic.

Use the following equation to determine whether the aggregate combination meets the acid insoluble residue requirement when blending fine aggregate or using an intermediate aggregate.

$$\frac{(A_1 \times P_1)+(A_2 \times P_2)+(A_{ia} \times P_{ia})}{100} \geq 60\%$$

where:

A_1 = acid insoluble (%) of fine aggregate 1
A_2 = acid insoluble (%) of fine aggregate 2
A_{ia} = acid insoluble (%) of intermediate aggregate passing the 3/8 in. sieve
P_1 = percent by weight of fine aggregate 1 of the fine aggregate blend
P_2 = percent by weight of fine aggregate 2 of the fine aggregate blend
P_{ia} = percent by weight of intermediate aggregate passing the 3/8-in. sieve

Alternatively to the above equation, blend fine aggregate with a Micro-Deval loss of less than 12%, when tested in accordance with Tex-461-A, with at least 40% of a fine aggregate with an acid insoluble residue of at least 60%.

Use the following equation to determine whether the aggregate combination meets the sand equivalency requirement when blending fine aggregate or using an intermediate aggregate.

$$\frac{(SE_1 \times P_1)+(SE_2 \times P_2)+(SE_{ia} \times P_{ia})}{100} \geq 80\%$$

where:

SE_1 = sand equivalency (%) of fine aggregate 1
SE_2 = sand equivalency (%) of fine aggregate 2
SE_{ia} = sand equivalency (%) of intermediate aggregate passing the 3/8 in. sieve
P_1 = percent by weight of fine aggregate 1 of the fine aggregate blend
P_2 = percent by weight of fine aggregate 2 of the fine aggregate blend
P_{ia} = percent by weight of intermediate aggregate passing the 3/8-in. sieve

4.2.3. **Chemical Admixtures**. Do not use Type C, E, F, or G admixtures in Class S bridge deck concrete. Do not use chemical admixtures containing calcium chloride in any concrete.

Use a 30% calcium nitrite solution when a corrosion-inhibiting admixture is required. Dose the admixture at the rate of gallons of admixture per cubic yard of concrete shown on the plans. Use set retarding admixtures, as needed, to control setting time to ensure concrete containing corrosion inhibiting admixtures remains workable for the entire duration of the concrete placement. Perform setting time testing and slump loss tests during trial batch testing.

4.2.4. **Air Entrainment**. When air-entrained concrete is shown on the plans, target an entrained air content of 4.0% for Class P concrete and 5.5% for all other classes of concrete. Use an approved air-entraining admixture when air-entrained concrete is specified, or when an air-entraining admixture is used at the Contractor's option. Unless otherwise shown on the plans, acceptance of concrete loads will be based on a tolerance of ±1.5% from the target air content. If the air content is more than 1.5 but less than 3.0% above the target air, the concrete may be accepted based on strength tests. For specified concrete strengths above 5,000 psi, a reduction of 1% entrained air content is permitted.

4.2.5. **Slump**. Provide concrete with a slump in accordance with Table 9 unless otherwise specified. When approved, the slump of a given concrete mix may be increased above the values shown in Table 9 using chemical admixtures, provided the admixture-treated concrete has the same or lower w/cm ratio and does not exhibit segregation or excessive bleeding. Request approval to exceed the slump limits shown in Table 9 sufficiently in advance for proper evaluation by the Engineer.

Table 9
Placement Slump Requirements

General Use	Placement Slump Range (in.)
Walls (>9 in. thick), caps, columns, piers	3–7
Bridge slabs, top slabs of direct traffic culverts, approach slabs, concrete overlays	3–6
Latex-modified concrete for bridge deck overlays	3–8
Inlets, manholes, walls (<9 in. thick), bridge railing, culverts, concrete traffic barrier, concrete pavement (formed)	4–6
Precast concrete	4–9
Underwater concrete placements	6–8-1/2
Drilled shafts, slurry displaced, underwater drilled shafts	See Item 416, "Drilled Shaft Foundations"
Curb, gutter, curb and gutter, concrete retards, sidewalk, driveways, seal concrete, anchors, riprap, small roadside sign foundations, concrete pavement repair, concrete repair	As approved

4.2.6. **Mix Design Options**.

4.2.6.1. **Option 1**. Replace cement with at least the minimum dosage listed on the MPL for the coal ash or natural pozzolan used in the mixture. Conduct Option 8 testing to determine the minimum replacement dosage as listed on the MPL. Do not replace more than 50% of the cement. Up to 70% of the cement may be replaced when concrete is used for mass concrete placements.

4.2.6.2. **Option 2**. Replace 35–50% of the cement with slag cement. Up to 70% of the cement may be replaced when concrete is used for mass concrete placements.

4.2.6.3. **Option 3**. Replace 35–50% of the cement with a combination of coal ash, slag cement, MFA, natural pozzolan, or at least 3% silica fume; however, no more than 10% may be silica fume. Up to 70% of the cement may be replaced when concrete is used for mass concrete placements.

4.2.6.4. **Option 4**. Use Type IP, IS, or IT cement as allowed in Table 8 for each class of concrete. When replacing blended cements with additional SCMs, the replacement limits in Option 3 will apply to the final cementitious mixture. When using fly ash or natural pozzolans not having a minimum dosage listed on the MPL in the final cementitious mixture, perform Option 8 testing.

4.2.6.5. **Option 5**. Option 5 is left intentionally blank.

4.2.6.6. **Option 6**. Use a lithium nitrate admixture at a minimum dosage determined by testing conducted in accordance with Tex-471-A. Before use of the mix, provide an annual certified test report signed and sealed by a licensed professional engineer, from a laboratory on the MPL, certified by the Materials and Tests Division (MTD) as being capable of testing in accordance with Tex-471-A.

4.2.6.7. **Option 7**. Ensure the total alkali contribution from the cement in the concrete does not exceed 3.5 lb. per cubic yard of concrete when using hydraulic cement not containing SCMs calculated as follows.

$$\text{lb. alkali per cu. yd.} = \frac{\left(\text{lb. cement per cu. yd.}\right) \times \left(\%\ \text{Na}_2\text{O equivalent in cement}\right)}{100}$$

In the above calculation, use the maximum cement alkali content reported on the cement mill certificate.

4.2.6.8. **Option 8**. Use Table 10 when deviating from Options 1–3 or when required by the coal ash MPL. Perform required testing annually and submit results to the Engineer. Laboratories performing ASTM C1260, C1567, and C1293 testing must be listed on the Department's MPL. Before use of the mix, provide a certified test report signed and sealed by a licensed professional engineer demonstrating the proposed mixture conforms to the requirements of Table 10.

Provide a certified test report signed and sealed by a licensed professional engineer, when high-performance concrete (HPC) is required, and less than 20% of the cement is replaced with SCMs, demonstrating ASTM C1202 test results indicate the permeability of the concrete is less than 1,500 coulombs tested immediately after either of the following curing schedules.

- Moisture cure specimens 56 days at 73°F.
- Moisture cure specimens 7 days at 73°F followed by 21 days at 100°F.

Table 10
Option 8 Testing and Mix Design Requirements

Scenario	ASTM C1260 Result		Testing Requirements for Mix Design Materials or Prescriptive Mix Design Options[1]
	Mix Design Fine Aggregate	Mix Design Coarse Aggregate	
A	>0.10%	>0.10%	Determine the dosage of SCMs needed to limit the 14-day expansion of each aggregate[1] to <0.10% when tested individually in accordance with ASTM C1567.
B	≤0.10%	≤0.10%	Use the minimum replacement listed in the coal ash MPL, or When Option 8 is listed on the MPL, use at least 40% coal ash with a maximum CaO[2] content of 25%, or Use any ternary combination that replaces 35–50% of cement.
	≤0.10%	ASTM C1293 1 yr. Expansion ≤0.04%	Use a minimum of 20% of any coal ash; or Use any ternary combination that replaces 20–50% of cement.
C	≤0.10%	>0.10%	Determine the dosage of SCMs needed to limit the 14-day expansion of course and intermediate[1] aggregate to <0.10% when tested individually in accordance with ASTM C1567.
D	>0.10%	≤0.10%	Use the minimum replacement listed in the coal ash MPL, or When Option 8 is listed in the MPL, use a minimum of 40% coal ash with a maximum CaO[2] content of 25%, or Use any ternary combination that replaces 35% to 50% of cement.
	> 0.10%	ASTM C1293 1 yr. Expansion ≤ 0.04%	Determine the dosage of SCMs needed to limit the 14-day expansion of each fine aggregate to <0.10% when individually tested in accordance with ASTM C1567.

1. Intermediate size aggregates will fall under the requirements of mix design coarse aggregate.
2. Average the CaO content from the previous ten values as listed on the test certificate.

4.2.7. **Optimized Aggregate Gradation (OAG) Concrete**. The gradation requirements shown in Table 4 and Table 6 do not apply when OAG concrete is specified or used by the Contractor, unless otherwise shown on the plans.

The fineness modulus for fine aggregate shown in Table 5 does not apply when OAG concrete is used. Establish the optimized aggregate gradation in accordance with Tex-470-A. Use at least 420 lb. per cubic yard of cementitious material when OAG concrete is used unless otherwise approved.

Make necessary adjustments to individual aggregate stockpile proportions during OAG concrete production when the gradation deviates more than 2% from the optimized gradation requirements.

4.2.8. **Self-Consolidating Concrete (SCC)**. Provide SCC meeting the requirements shown in Table 11 when approved for use in precast concrete. Use concrete with a slump flow that can be placed without vibration and will not segregate or excessively bleed.

Request approval to exceed the slump flow limits sufficiently in advance for proper evaluation by the Engineer.

Table 11
Mix Design Requirements for SCC

Tests	Test Method	Acceptable Limits
Slump flow for precast concrete	ASTM C1611	22–27[1]
T_{50}, sec.	ASTM C1611	2–7
VSI rating	ASTM C1611	0 or 1
Passing ability, in.	ASTM C1621	≤2
Segregation column, %	ASTM C1610	≤10
Bleeding, %	ASTM C232	≤2.5

1. These slump flow limits are generally acceptable for most applications. However, slump flow limits may be adjusted during mix design approval process and when approved.

4.3. **Concrete Trial Batches**. Perform trial batches when required by the plans, or when previous satisfactory field data is not available. Submit previous satisfactory field data to the Engineer showing the proposed mix design conforms to specification requirements when trial batches are not required and before concrete is placed. Trial batch test results will be reported to the Contractor and the concrete supplier. Trial batches are not required for Class A, B, or E concrete unless establishing target values as described below.

Perform trial batches for all self-consolidating concrete mix designs.

Make all trial batches using the proposed ingredients in a mixer that is representative of the mixers to be used on the project when required. Make the batch size at least 50% of the mixer's rated capacity. Alternatively, use an AASHTO-accredited laboratory to perform laboratory trial batches using all the proposed ingredients. Perform fresh concrete tests for air content and slump, and make, cure, and test strength specimens for compliance with specification requirements. Test at least one set of design strength specimens, consisting of two specimens per set, at 7-day, 28-day, and at least one additional age unless otherwise directed. Before placing, provide the Engineer the option of witnessing trial batches, including the testing of the concrete. If not provided this option, the Engineer may require additional trial batches, including testing, before the concrete is placed.

Trial batches for precast concrete will be performed in accordance with Tex-703-I to show proposed mix design meets the requirements of the pertinent class of concrete, or Table 11 when SCC is used.

Establish a compressive strength target value in accordance with Tex-427-A for each Class A, B, and E concrete.

When changes are made to the type, brand, or source of aggregates, cement, SCM, water, or chemical admixtures, submit previous satisfactory field data, data from a new trial batch, or other evidence showing the change will not adversely affect the relevant properties of the concrete. Submit the data for approval before making changes to the mix design. A change in vendor does not necessarily constitute a change in materials or source. The Engineer may waive new trial batches when there is a prior record of satisfactory performance with the ingredients. During concrete production, dosage changes of chemical admixtures used in the trial batches will not require a re-evaluation of the mix design.

The Contractor has the option of performing trial batches in conjunction with concrete placements except for SCC mixtures, when new trial batches are required during the course of the project. If the concrete fails to meet any requirement, the Engineer will determine acceptability and payment adjustments. Establishing target strength for Class A, B, and E concrete may be conducted during these placements.

Establish the strength–maturity relationship in accordance with Tex-426-A when the maturity method is specified or permitted. When using the maturity method, any changes in any of the ingredients, including changes in proportions, will require the development of a new strength–maturity relationship for the mix.

4.3.1. **Mix Design of Record**. Once a trial batch or previously satisfactory field data substantiates the mix design, the proportions and mixing methods used become the mix design of record. Do not exceed mix design w/cm ratio.

4.4. **Production Testing**.

4.4.1. **Aggregate Moisture Testing**. Determine moisture content in accordance with Tex-409-A or Tex-425-A for coarse, intermediate, and fine aggregates at least twice per week, when there is an apparent change, or for new shipments of aggregate. When aggregate hoppers or storage bins are equipped with properly maintained electronic moisture probes for continuous moisture determination, moisture tests in accordance with Tex-409-A or Tex-425-A are not required.

When producing SCC, and when aggregate hoppers or storage bins are not equipped with electronic moisture probes, determine the moisture content of the aggregates before producing the first concrete batch each day. Thereafter, determine the moisture content every 4 hr. or when there is an apparent change while SCC is being produced.

4.4.2. **Aggregate Gradation Testing**. Perform a sieve analysis in accordance with Tex-401-A on each stockpile used in the blend at least 1 day before producing OAG concrete. Perform sieve analysis on each stockpile after every 10,000 cu. yd. of Class P OAG concrete produced, and every 1,000 cu. yd. for all other structural-class concrete. Provide sieve analysis data to the Engineer.

4.5. **Measurement of Materials**.

4.5.1. **Non-Volumetric Mixers**. Measure aggregates by weight. Correct batch weight measurements for aggregate moisture content. Measure mixing water, consisting of water added to the batch, ice added to the batch, water occurring as surface moisture on the aggregates, and water introduced in the form of admixtures, by volume or weight. Measure ice by weight. Measure cement and SCMs in a hopper and on a separate scale from those used for other materials. When measuring by cumulative weight, measure the cement first and ensure the cement meets the cement tolerance shown in Table 12 before measuring the SCMs. Measure concrete chemical admixtures by weight or volume. Measure batch materials within the tolerances shown in Table 12.

Table 12
Mix Design Batching Tolerances—Non-Volumetric Mixers

Material	Tolerance (%)
Cement, wt.	-1 to +3
SCM, wt.	-1 to +3
Cement + SCM (cumulative weighing), wt.	-1 to +3
Water, wt. or volume	±3[1]
Fine aggregate, wt.	±2
Coarse aggregate, wt.	±2
Fine + coarse aggregate (cumulative weighing), wt.	±1
Chemical admixtures, wt. or volume	±3

1. Allowable deviation from target weight, not including water withheld or moisture in the aggregate. The Engineer will verify the w/cm ratio is within specified limits.

Ensure the quantity measured, when measuring cementitious materials at less than 30% of scale capacity, is accurate to no less than the required amount and no more than 4% in excess. Ensure the cumulative quantity, when measuring aggregates in a cumulative weigh batcher at less than 30% of the scale capacity, is measured accurately to ±0.3% of scale capacity or ±3% of the required cumulative weight, whichever is less.

Measure cement in number of bags under special circumstances when approved. Use the weights specified on the packaging. Weighing bags of cement is not required. Ensure fractional bags are not used except for small hand-mixed batches of approximately 5 cu. ft. or less and when an approved method of volumetric or weight measurement is used.

4.5.2. **Volumetric Mixers**. Provide an accurate method of measuring all ingredients by volume and calibrate equipment to assure correct measurement of materials within the specified tolerances. Base tolerances on volume-weight relationship established by calibration and measure the various ingredients within the tolerances shown in Table 13. Correct batch measurements for aggregate moisture content.

Table 13
Mix Design Batching Tolerances—Volumetric Mixers

Material	Tolerance
Cement, wt. %	0 to +4
SCM, wt. %	0 to +4
Fine aggregate, wt. %	±2
Coarse aggregate, wt. %	±2
Admixtures, wt. or volume %	±3
Water, wt. or volume %	±1

4.6. **Mixing and Delivering Concrete**.

4.6.1. **Mixing Concrete**. Operate mixers and agitators within the limits of the rated capacity and speed of rotation for mixing and agitation as designated by the manufacturer of the equipment. Provide concrete in a thoroughly mixed and uniform mass with a satisfactory degree of uniformity when tested in accordance with Tex-472-A.

Do not top-load new concrete onto returned concrete.

Adjust mixing times and batching operations as necessary when the concrete contains silica fume to ensure the material is completely and uniformly dispersed in the mix. The dispersion of the silica fume within the mix will be verified by MTD using cylinders made from trial batches. Make necessary changes to the batching operations, if uniform dispersion is not achieved, until uniform and complete dispersion of the silica fume is achieved.

Mix concrete by hand methods or in a small motor-driven mixer when permitted, for small placements of less than 2 cu. yd. For such placements, proportion the mix by volume or weight.

4.6.2. **Delivering Concrete**. Deliver concrete to the project in a thoroughly mixed and uniform mass, and discharge the concrete with a satisfactory degree of uniformity. Conduct testing in accordance with Tex-472-A when there is a reason to suspect the uniformity of concrete and as directed.

Maintain concrete delivery and placement rates sufficient to prevent cold joints.

Adding chemical admixtures or the portion of water withheld is permitted only at the jobsite, under the supervision of the Engineer, to adjust the slump or slump flow of the concrete. Do not add water or chemical admixtures to the batch after more than an amount needed to conduct slump testing has been discharged. Turn the drum or blades at least 30 additional revolutions at mixing speed to ensure thorough and uniform mixing of the concrete. When this water is added, do not exceed the approved mix design w/cm ratio.

When truck mixers are equipped with automated water or chemical admixture measurement and slump or slump flow monitoring equipment, the addition of water or chemical admixtures during transit is allowed. Reports generated by this equipment must be submitted to the Engineer daily.

Before unloading, furnish the delivery ticket for the batch of concrete containing the information required in accordance with ASTM C94. The Engineer will verify all required information is provided on the delivery tickets. The Engineer may suspend concrete operations until the corrective actions are implemented if delivery tickets do not provide the required information. The Engineer will verify the design w/cm ratio is not exceeded.

An electronic ticket delivery system (e-ticketing) may be used instead of printed tickets. The use of e-ticketing will require written approval. At minimum, the system will:

- provide electronic, real-time e-tickets meeting the requirements above;
- automatically generate e-tickets using software and hardware fully integrated with the batch plant scales used to weigh the material;

- be able to record all water and chemical admixture additions performed at the jobsite or in transit when allowed;
- provide the ability to associate fresh concrete test results with each e-ticket;
- be designed in such a way that data input cannot be altered by the Contractor or the Engineer;
- provide the Engineer access to the e-ticketing data in real-time using a web-based or app-based system compatible with iOS; and
- provide offline capabilities to prevent data loss if power or connectivity is lost.

The Engineer may discontinue use of the e-ticketing and require printed tickets as needed if the e-ticketing system fails to meet the above requirements.

Begin the discharge of concrete delivered in truck mixers within the times shown in Table 14. Concrete delivered after these times and concrete that has not begun to discharge within these times will be rejected. The discharge times shown in Table 14 may be extended provided slump loss testing is conducted in accordance with Tex-430-A to show concrete will maintain the minimum required slump for the requested discharge time extension. Extended discharge times will be allowed when the concrete temperature at time of discharge is no more than 10°F higher than the slump loss test concrete temperature.

Table 14
Concrete Discharge Times for Truck Mixers

Fresh Concrete Temperature, °F	Max Time After Batching for Concrete Not Containing Type B or D Admixtures, min.	Max Time After Batching for Concrete Containing Type B or D Admixtures,[1] min.
90 and above	45	75
75 ≤T <90	60	90
T <75	90	120

1. Concrete must contain at least the minimum manufacturer's recommended dosage of Type B or D admixture.

4.7. **Placing, Finishing, and Curing Concrete**. Place, finish, and cure concrete in conformance with the pertinent Items.

4.8. **Sampling and Testing of Concrete**. Unless otherwise specified, all fresh and hardened concrete is subject to testing as follows.

4.8.1. **Certification of Testing Personnel**. Contractor personnel performing testing must be either ACI-certified or qualified by a Department-recognized equivalent written and performance testing program for the tests being performed. Personnel performing these tests are subject to Department approval. Use of a commercial laboratory is permitted at the Contractor's option.

4.8.2. **Fresh Concrete**. Provide safe access and assistance to the Engineer during sampling. Fresh concrete will be sampled for testing at the point of discharge from the delivery equipment or end of belt conveyors.

4.8.3. **Testing Concrete**. The Engineer, unless specified in other Items or shown on the plans, will test the fresh and hardened concrete in accordance with the following methods.

- **Slump**. Tex-415-A
- **Air Content**. Tex-414-A or Tex-416-A, only when air-entrained concrete is shown on the plans
- **Temperature**. Tex-422-A
- **Making and Curing Strength Specimens**. Tex-447-A
- **Compressive Strength**. Tex-418-A
- **Flexural Strength**. Tex-448-A
- **Maturity**. Tex-426-A

Flexural strength and maturity specimens will not be made unless specified in other Items or shown on the plans.

Concrete with slump less than minimum required after all addition of water withheld will be rejected, unless otherwise allowed by the Engineer. Concrete with slump exceeding maximum allowed may be used at the Contractor's option. If used, Engineer will make, test, and evaluate strength specimens in accordance with Article 421.5., "Acceptance of Concrete." Acceptance of concrete not meeting air content or temperature requirements will be determined by Engineer. Fresh concrete exhibiting segregation and excessive bleeding will be rejected.

4.8.3.1. **Strength Specimen Handling**. After strength test specimens are molded, protect and cure in conformance with pertinent test methods. When necessary, deliver Contractor-molded specimens to curing facilities, remove specimens from their molds, and place specimens in curing tanks within 24–48 hr. after molding, in conformance with pertinent test methods. The Engineer will deliver Department-molded specimens to curing facilities, remove specimens from their molds, and place specimens in curing tanks within 24–48 hr. after molding, in conformance with pertinent test methods.

5. ACCEPTANCE OF CONCRETE

The Engineer will sample and test the fresh and hardened concrete for acceptance. The test results will be reported to the Contractor and the concrete supplier. Investigate the quality of the materials, the concrete production operations, and other possible problem areas to determine the cause for any concrete that fails to meet the required strengths as specified below. Take necessary actions to correct the problem, including redesign of the concrete mix. The Engineer may suspend all concrete operations under the pertinent Items if the Contractor is unable to Identify, document, and correct the cause of the low strengths in a timely manner. Resume concrete operations only after obtaining approval for any proposed corrective actions. Concrete failing to meet the required strength as specified below will be evaluated in accordance with Article 421.6., "Measurement and Payment."

5.1. **Structural Class of Concrete**. For concrete classes identified as structural concrete shown in Table 8, the Engineer will make and test 7-day and 28-day specimens, and, if necessary, 56-day specimens. The Engineer will base acceptance on attaining the design strength shown in Table 8 or design strength shown on the plans.

5.2. **Class P and Class High Early Strength (HES)**. The Engineer will base acceptance in accordance with Item 360 and Item 361, "Repair of Concrete Pavement."

5.3. **All Other Classes of Concrete**. For concrete classes not identified as structural concrete in Table 8, the Engineer will make and test 7-day specimens. The Engineer will base acceptance on attaining design strength or attaining the 7-day target value established in accordance with Tex-427-A.

6. MEASUREMENT AND PAYMENT

The work performed, materials furnished, equipment, labor, tools, and incidentals will not be measured or paid for directly, but will be subsidiary to pertinent Items.

The following procedure will be used to evaluate concrete where one or more project acceptance test specimens fail to meet the required design strength specified in this Item or shown on the plans.

- The concrete for a given placement will be considered structurally adequate and accepted at full price if the average of 28-day or 56-day set of specimens made at the time of placement meets the required design strength, provided no single specimen test result is less than 85% of the required design strength.
- The Engineer will perform a structural review of the concrete to determine its adequacy to remain in service if the average 28-day or 56-day set of specimens made at the time of placement is less than the required design strength or if any single specimen test result is less than 85% of the required design strength. If the concrete is determined to be structurally adequate, the Engineer will determine the limits of the payment adjustment using the formula below.

- If the in situ concrete strength is needed for the structural review, take cores at locations designated by the Engineer in accordance with Tex-424-A. The Engineer will test the cores. The coring and testing will be at the Contractor's expense.
- If all the tested cores meet the required design strength, the concrete will be paid for at full price.
- If any of the tested cores do not meet the required design strength, but the average strength attained is determined to be structurally adequate, the Engineer will determine the limits of the payment adjustment using the following formula.

$$A = B_p\left[-5.37\left(\frac{S_a}{S_s}\right)^2 + 11.69\left(\frac{S_a}{S_s}\right) - 5.32\right]$$

where:

A = Amount to be paid per unit of measure for the entire placement in question.
S_a = Actual average strength from cylinders or cores. Use values from cores, if taken.
S_s = Minimum required strength (specified).
B_p = Unit bid price.

- If the structural review determines the concrete is not adequate to remain in service, the Engineer will determine the limits of the concrete to be removed.
- The decision to reject structurally inadequate concrete or to apply the payment adjustment factor will be made no later than 7 days after 28-day or 56-day design strength specimens, or cores, if taken, are tested.

Item 422
Concrete Superstructures

1. DESCRIPTION

Construct reinforced concrete bridge slabs, decks, flat slabs, slab and girder units (pan formed), approach slabs, or other bridge superstructure elements as specified.

2. MATERIALS

2.1. **Concrete**. Provide concrete in accordance with Item 421, "Hydraulic Cement Concrete." Provide Class S or Class S (HPC) concrete for all cast-in-place concrete unless otherwise shown on the plans. Provide the class of concrete for precast components shown on the plans or in conformance with governing Items.

2.2. **Reinforcing Steel**. Provide reinforcing steel in accordance with Item 440, "Reinforcement for Concrete."

2.3. **Structural Grout**. Provide grout in accordance with DMS-4675, "Cementitious Grouts and Mortars for Miscellaneous Applications," or as shown on the plans.

2.4. **Expansion Joint Material**. Provide materials in accordance with DMS-6310, "Joint Sealants and Fillers."

- Provide preformed bituminous fiber expansion joint material unless specified otherwise.
- Provide a Class 4, 5, or 7 low-modulus silicone sealant unless otherwise directed.
- Provide asphalt board that conforms to dimensions shown on the plans.
- Provide re-bonded neoprene filler that conforms to the dimensions shown on the plans.

2.5. **Foam Bedding Strips for Prestressed Concrete Panels**. Use extruded polystyrene in accordance with ASTM C578, Type VI (40-psi compressive strength) or as specified.

Provide a manufacturer's certification or data sheet stating the foam meets these requirements. Use an adhesive or bonding agent compatible with polystyrene as recommended by the polystyrene manufacturer.

2.6. **Evaporation Retardants**. Provide evaporation retardants in accordance with DMS-4650, "Hydraulic Cement Concrete Curing Materials and Evaporation Retardants."

2.7. **Curing Materials**. Provide membrane curing compounds in accordance with DMS-4650.

Provide cotton mats that consist of a filling material of cotton "bat" or "bats" (at least 12 oz. per square yard) completely covered with unsized cloth (at least 6 oz. per square yard) stitched longitudinally with continuous parallel rows of stitching spaced at less than 4 in., or tuft both longitudinally and transversely at intervals less than 3 in. Provide cotton mats that are free of tears and in good general condition. Provide a flap at least 6 in. wide consisting of two thicknesses of the covering and extending along one side of the mat.

Provide polyethylene sheeting that is at least 4 mils thick and free of visible defects. Provide opaque white sheeting when the ambient temperature during curing exceeds 90°F.

Provide burlap-polyethylene mats made from burlap impregnated on one side with a film of opaque white-pigmented polyethylene, free of visible defects. Provide laminated mats that have at least one layer of an impervious material such as polyethylene, vinyl plastic, or other acceptable material (either as a solid sheet or impregnated into another fabric) and are free of visible defects.

Provide burlap material that complies with AASHTO M 182, Class 3 (10 oz. per square yard) with the following additions.

- Manila hemp may also be used to make burlap.
- Do not use burlap fabricated from bags.
- Do not use burlap containing any water-soluble ingredient that will retard the setting time of concrete.

Provide used burlap complying with the requirements stated above, and that only has been used previously for curing concrete. "Like new" cleanliness is not expected, but contamination with any substance foreign to the concrete curing process, such as grease or oil, will be cause for rejection.

2.8. **Epoxy**. Provide epoxy materials in accordance with DMS-6100, "Epoxies and Adhesives," unless otherwise specified.

3. EQUIPMENT

3.1. **Fogging Equipment**. Use fogging equipment that can apply water in a fine mist, not a spray. Produce the fog using equipment that pumps water or water and air under high pressure through a suitable atomizing nozzle. Use hand-held mechanical equipment portable enough to use in the direction of any prevailing wind and adaptable for intermittent use to prevent excessive wetting of the concrete.

3.2. **Transporting and Placing Equipment**. Use appropriate transporting and placing equipment such as buckets, chutes, buggies, belt conveyors, pumps, or other equipment as necessary. Do not transport or convey concrete by equipment made of aluminum. Use carts with pneumatic tires for carting or wheeling concrete over newly placed slabs.

Use tremies that are watertight to control the fall of concrete and of large enough diameter to allow the placement of the concrete but less than 14 in. in diameter.

Use pumps with lines at least 5 in. inside diameter (ID) where Grade 2 or smaller coarse aggregate is used and at least 8 in. ID for Grade 1 coarse aggregate.

3.3. **Vibrators**. Use immersion-type vibrators for consolidation of concrete. Provide at least two standby vibrators for emergency use. Furnish vibrator head covered by a rubberized or elastomeric cover when used near epoxy-coated reinforcing steel.

3.4. **Screeds and Work Bridges for Bridge Slabs**. Use a self-propelled transverse screed or a mechanical longitudinal screed for bridge slabs. Use transverse screeds that can follow the skew of the bridge for skews greater than 15° unless otherwise approved. Equip transverse screeds with a pan float and skew kit. Manually operated screeding equipment may be used if approved for top slabs of culverts, small placements, or unusual conditions. Use screeds that are rigid and heavy enough to hold true to shape and have sufficient adjustments to provide for the required camber or section. Equip the screeds, except those of the roller drum type, with metal cutting edges.

Use sufficient work bridges for finishing operations for bridge slabs. Mount a carpet drag to a work bridge or a movable support system that can vary the area of carpet in contact with the concrete. Use carpet pieces long enough to cover the entire width of the placement. Splice or overlap the carpet as necessary. Ensure enough carpet is in contact longitudinally with the concrete being placed to provide the desired surface finish. Use artificial grass-type carpeting with a molded polyethylene pile face with a blade length between 5/8 and 1 in. and minimum weight of 70 oz. per square yard. Ensure the carpet has a strong, durable backing not subject to rot and the facing is adequately bonded to the backing to withstand the intended use. A burlap drag, attached to the pan float on a transverse screed, may be used instead of the carpet drag.

3.5. **Temperature Recording Equipment**. Use strip chart temperature-recording devices, recording maturity meters in accordance with Tex-426-A, or other approved devices that are accurate within ±2°F within the range of 32–212°F.

3.6. **Artificial Heating Equipment**. Use artificial heating equipment as necessary for maintaining the concrete temperatures in accordance with Section 422.4.6.11., "Placing Concrete in Cold Weather."

3.7. **Sawing Equipment**. Use sawing equipment capable of cutting grooves in completed bridge slabs and top slabs of direct traffic culverts. Provide grooves that are 1/8–3/16 in. deep, nominally 1/8 in. wide, and spaced at 1 in. Use sawing equipment capable of cutting grooves in hardened concrete within 18 in. of the barrier rail or curb.

3.8. **Spraying Equipment**. Use mechanically powered pressure sprayers with appropriate atomizing nozzles for the application of membrane curing. Mechanically driven spraying equipment, adaptable to the rail system used by the screeds, may be used for applying membrane curing to bridge slabs. Use hand-pressurized spray equipment with two or three fan-spray nozzles if approved. Ensure the spray from each nozzle overlaps the spray from adjacent nozzles by approximately 50%.

3.9. **Concrete Testing Equipment**. Provide testing equipment for the Engineer's use in accordance with Section 421.3.3., "Testing Equipment."

4. CONSTRUCTION

Obtain approval for proposed construction methods before starting work. Approval of construction methods and equipment does not relieve the Contractor's responsibility for safety or correctness of methods, adequacy of equipment, or completion of work in full accordance with the Contract. Attend the preconstruction (pre-pour) meetings for bridge slabs conducted by the Engineer. Provide and obtain approval for proposed finishing methods, interim curing methods, and final curing methods.

Unless otherwise shown on the plans, it is the Contractor's option to perform testing on structural concrete (structural classes of concrete are identified in Table 8 of Section 421.4.1., "Classification of Concrete Mix Designs") to determine the in situ strength to address the schedule restrictions listed below. The Engineer may require the Contractor to perform this testing for concrete placed in cold weather. Make enough test specimens for Contractor-performed testing to ensure strength requirements are met for the operations listed below. Make at least one set of test specimens for each element cast each day. Cure these specimens under the same conditions as the portion of the structure involved for all stages of construction. Ensure safe handling, curing, and storage of all test specimens. Provide testing personnel, and sample and test the hardened concrete in accordance with Section 421.4.8., "Sampling and Testing of Concrete." The maturity method, Tex-426-A, may be used for in-situ strength determination for schedule restrictions if approved. Coring will not be allowed for in-situ strength determination for schedule restrictions. Provide the Engineer the opportunity to witness all testing operations. Report all test results to the Engineer.

If the Contractor does not wish to perform schedule restriction testing, the Engineer's 7-day lab-cured tests, performed in accordance with Article 421.5., "Acceptance of Concrete," will be used for schedule restriction determinations. The Engineer may require additional time for strength gain to account for field curing conditions such as cold weather.

4.1. **Schedule Restrictions and Inspection Hold-Points**.

4.1.1. **Placement of Superstructure Members**. Place or cast superstructure members after the substructure concrete has attained a compressive strength of 3,000 psi.

4.1.2. **Longitudinal Screeding of Bridge Slabs**. Place a longitudinal screed directly on previously placed concrete slabs to check and grade an adjacent slab only after the previously placed slab has aged at least 24 hr. Place and screed the concrete after the previously placed slabs have aged at least 48 hr. Maintain curing of the previously placed slabs during placement.

4.1.3. **Staged Placement of Bridge Slabs on Continuous Steel Units**. Ensure the previously placed concrete attains a compressive strength of 3,000 psi when staged placement of a slab is required or used before

placing the next stage placement. Multiple stages may be placed in a single day if approved by the Engineer of Record.

4.1.4. **Storage of Materials on Structure**. Obtain approval to store materials on completed portions of a structure once a compressive strength of 3,000 psi has been attained. Maintain proper curing if materials will be stored on structures before completion of curing.

4.1.5. **Placement of Equipment and Machinery**. Do not place erection equipment or machinery on the structure until the concrete has attained the design strength specified in Section 421.4.1., "Classification of Concrete Mix Designs," unless otherwise approved.

4.1.6. **Carting of Concrete**. Cart, wheel, or pump concrete over completed slabs after the completed concrete has attained a compressive strength of 3,000 psi. Maintain curing during these operations.

4.1.7. **Placing Bridge Rails**. Reinforcing steel and concrete for bridge rails may be placed on bridge slabs once the slab concrete has attained a compressive strength of 3,000 psi. Ensure the slab concrete has attained its design strength specified in Section 421.4.1., "Classification of Concrete Mix Designs," before placing railing concrete if slipforming methods are used for railing concrete.

4.1.8. **Opening to Construction Traffic**. Bridges may be opened to all construction traffic when the design strength specified in Section 421.4.1., "Classification of Concrete Mix Designs," has been attained if curing is maintained. Avoid crossing bridges at high speeds until railing concrete, if present, has attained a compressive strength of 3,000 psi.

4.1.9. **Opening to Full Traffic**. Bridges may be opened to the traveling public when the design strength specified in Section 421.4.1., "Classification of Concrete Mix Designs," has been attained for all structural elements, including railing subject to impact from traffic and when curing has been completed for all slabs. Obtain approval before opening bridges to the traveling public.

4.1.10. **Inspection Hold-Points**. Notify the Engineer of progress of work and when work is complete before beginning the next stage of work.

- Beam erection and bracing
- Formwork, including setting of precast panels
- Placing reinforcing steel
- Screed dry run and pre-pour clear cover checks
- Attend pre-pour meeting conducted by the Engineer
- Post-curing crack inspection

4.2. **Forms**. Submit forming plans for decks or slabs on beams or girders, overhangs, cast-in-place spans, and bracing systems for girders when the overhang exceeds 3 ft. 6 in. Submit similar plans for other units of the superstructure as directed. Show all essential details of proposed forms and bracing. Have a licensed professional engineer design, seal, and sign these plans. Department approval is not required, but the Department reserves the right to request modifications to the plans. The Contractor is responsible for the adequacy of these plans.

Design job-fabricated formwork assuming a weight of 150 pcf for concrete, and include a minimum live load allowance of 50 psf of horizontal surface of the form. Do not exceed 125% of the allowable stresses used by the Department for the design of structures.

Use conventional forms, permanent metal deck forms, or prestressed concrete panels for slabs on beams or girders unless specified otherwise. Use permanent metal deck forms or conventional forms for thickened slabs, diaphragms, or other regions as shown on the plans where prestressed concrete panels are not used. Provide prestressed concrete panels as shown on the plans and in accordance with Item 424, "Precast Concrete Structural Members (Fabrication)." Provide copies of the precast panel layout drawings from the panel fabricator.

Use only material that is inert, nonbiodegradable, and nonabsorptive for forms to be left in place.

Overhang form supports that transmit a horizontal force to a steel girder or beam or to a prestressed concrete beam are permitted provided a satisfactory structural analysis has been made of the effect on the girder or beam as shown on the submitted formwork plans.

Use beam bracing as shown on the plans when overhang brackets are used on prestressed concrete beam spans with slab overhangs not exceeding 3 ft. 6 in. Provide and design additional support or bracing for the outside beams regardless of the type of beam used for spans with overhangs exceeding this amount.

Attachment of forms or screed supports for bridge slabs to steel I-beams or girders may be by welding subject to the following requirements.

- Do not weld to tension flanges or to areas indicated on the plans.
- Weld in accordance with Item 448, “Structural Field Welding.”

When setting forms of any type, consider:

- deflections due to cast-in-place slab concrete and railing shown in the dead load deflection diagram,
- differential beam or girder deflections due to skew angles and the use of certain stay-in-place slab forming systems, and
- deflection of the forming system due to the wet concrete.

Securely stake forms to line and grade and maintain in position for bridge approach slabs. Rigidly attach inside forms for curbs to the outside forms.

Construct all forms to permit their removal without marring or damaging the concrete. Clean all forms and footing areas of any extraneous matter before placing concrete. Provide openings in forms if needed for the removal of laitance or foreign matter.

Treat the facing of all forms with bond-breaking coating of composition that will not discolor or injuriously affect the concrete surface. Take care to prevent coating of the reinforcing steel.

Complete all preparatory work before placing concrete.

4.2.1. **Precast Panels**. Profile each beam to determine the actual camber or sag of the beams before placing panels. Adjust the profile grade line, panel elevation, and bearing seat elevations as needed to obtain the required cover over the slab reinforcement and slab thickness while maintaining ride quality. Make adjustments over suitable increments when a profile grade line adjustment is necessary, depending on span lengths, so the revised grade line will produce a uniform profile and good riding qualities. Obtain approval for the grade adjustments before placement. Consider actual beam camber in adjacent spans or slab placements when adjusting the grade line. Inspect each panel before being placed for cracks and other damage. Refer to Section 424.4.3.1., “Defects and Breakage,” for rejection criteria due to cracking and other damage.

4.2.2. **Permanent Metal Decking**. Submit signed and sealed design calculations in addition to the required formwork drawings. Design and install formwork as shown on the plans and formwork drawings. The plans will govern in cases where the plans and the formwork drawings conflict.

4.2.3. **Conventional Forms**. Provide properly seasoned good-quality lumber free of imperfections that would affect its strength or impair the finished surface of the concrete. Provide timber or lumber that meets or exceeds the requirements for species and grade shown on the submitted formwork plans.

Maintain forms or form lumber that will be reused so that it stays clean and in good condition. Do not use any lumber that is split, warped, bulged, or marred or that has any defect that will produce inferior work; remove such lumber from the work.

Use plywood at least 3/4 in. thick. Use plywood for forming surfaces that remain exposed that meets the requirements for B-B Plyform Class I or Class II Exterior of the U.S. Department of Commerce Voluntary Product Standard PS 1.

Space studs and joists so that the facing form material remains in true alignment under the imposed loads.

Place forms with the form panels symmetrically (long dimensions set in the same direction) for surfaces exposed to view and receiving only an ordinary surface finish as defined in Section 420.4.13., “Ordinary Surface Finish.” Make horizontal joints continuous.

Make molding for chamfer strips or other uses of materials of a grade that will not split when nailed and can be maintained to a true line without warping. Dress wood molding on all faces. Fill forms at all sharp corners and edges with triangular chamfer strips measuring 3/4 in. on the sides unless otherwise shown on the plans.

4.3. **Placing Reinforcement**. Place reinforcement as provided in Item 440. Do not weld reinforcing steel supports to I-beams or girders or to reinforcing steel except as shown on the plans.

4.4. **Drains**. Install and construct weep holes and roadway drains as shown on the plans.

4.5. **Extending Existing Slabs**. Verify pertinent dimensions and elevations of the existing structure before ordering any required materials.

4.5.1. **Removal**. Remove portions of the existing structure to the lines and dimensions shown on the plans or as directed. Dispose of these materials as shown on the plans or as directed. Remove any metal railing without damaging it, and stack it neatly on the right of way at locations that do not interfere with traffic or construction or at locations shown on the plans. All removed metal railing remains the property of the Department unless otherwise shown on the plans. Repair any portion of the remaining structure damaged as a result of the construction. Do not use explosives to remove portions of the existing structure unless approved in writing. Do not use a demolition ball, other swinging weight, or impact equipment unless shown on the plans. Use pneumatic or hydraulic tools for final removal of concrete at the “break” line. Use removal equipment, as approved, that will not damage the remaining concrete.

4.5.2. **Reuse of Removed Portions of Structure**. Detach and remove all portions of the old structure that are to be incorporated into the extended structure to the lines and details as shown on the plans or as directed. Move the unit to be reused to the new location specified using approved methods. Place the reinforcement and extension concrete as shown on the plans.

4.5.3. **Breaking Back Bridge Slabs**. Saw the top surface of the slab for bridge slabs and direct traffic slabs of box culverts along the “break” line to a depth of 1/2 in. before breaking back. Do not cut the reinforcement at the “break” line. Sever the concrete at the “break” line. Do not damage the remaining reinforcement within one lap length of the “break” line during removal of the designated portion of the existing structure.

4.5.4. **Splicing Reinforcing Steel**. Splice new reinforcing bars to exposed bars in the existing structure using lap splices in accordance with Item 440 unless otherwise shown on the plans. The new reinforcing steel does not need to be tied to the existing steel where spacing or elevation does not match that of the existing steel, provided the lap length is attained. Weld in accordance with Item 448 when welded splices are permitted. Install any required dowels in accordance with Section 422.4.6.10., “Installation of Dowels and Anchor Bolts.”

4.5.5. **Concrete Preparation**. Roughen and clean concrete surfaces that are in contact with new construction before the placing of forms. Prepare these construction joint surfaces in accordance with Section 422.4.6.7., “Construction Joints.”

4.6. **Placing Concrete**. Do not place concrete unless approval is obtained for the hold-point inspections in accordance with Section 422.4.1.10., “Inspection Hold-Points,” and the pre-pour meeting has been conducted. Give the Engineer sufficient advance notice before placing concrete in any unit of the structure to permit the final inspection of forms, reinforcing steel placement, and other preparations. Obtain approval for

proposed curing methods based on forecast weather conditions for the expected duration of the pour and use the evaporation rate nomograph as mentioned below to determine the required curing options.

Follow the sequence of placing concrete shown on the plans or specified.

Do not place concrete when impending weather conditions would impair the quality of the finished work. Place concrete in early morning or at night or adjust the placement schedule for more favorable weather if conditions of wind, humidity, and temperature are such that concrete cannot be placed without the potential for plastic shrinkage cracking. Consult the evaporation rate nomograph in PCA's *Design and Control of Concrete Mixtures* or the evaporation rate spreadsheet available on the Department's website for shrinkage cracking potential. Adequately illuminate the entire placement site when mixing, placing, and finishing concrete in non-daylight hours as approved.

Furnish adequate shelter to protect the concrete against damage from rainfall or from freezing temperatures in accordance with this Item if changes in weather conditions require protective measures after work starts. Continue operations during rainfall only if approved. Use protective coverings for the material stockpiles. Cover aggregate stockpiles only to the extent necessary to control the moisture conditions in the aggregates.

Allow at least 1 curing day after the concrete has achieved initial set before placing strain on projecting reinforcement to prevent damage to the concrete.

4.6.1. **Placing Temperature**. Place superstructure concrete only when its temperature at the time of placement is between 50 and 85°F. Increase the minimum placement temperature to 60°F if slag cement is used in the concrete.

4.6.2. **Transporting Time**. Begin the discharge of concrete delivered in truck mixers within the times shown in Table 14 of Item 421.

4.6.3. **Workability of Concrete**. Place concrete with a slump as specified in Section 421.4.2.5., "Slump." Placing concrete with slump exceeding maximum specified may result in bridge deck cracking and be subject to Section 422.4.10., "Defective Work." Water may be added to the concrete before discharging any concrete from the truck to adjust for low slump, provided the maximum mix design water-cement ratio is not exceeded. Mix concrete after introduction of any additional water or chemical admixtures in accordance with Section 421.4.6., "Mixing and Delivering Concrete." Do not add water or chemical admixtures after any concrete has been discharged.

4.6.4. **Transporting Concrete**. Use a method and equipment capable of maintaining the rate of placement shown on the plans or required by this Item to transport concrete to the forms. Transport concrete by buckets, chutes, buggies, belt conveyors, pumps, or other methods.

Protect concrete transported by conveyors from sun and wind to prevent loss of slump and workability. Shade or wrap with wet burlap pipes through which concrete is pumped as necessary to prevent loss of slump and workability.

Arrange and use chutes, troughs, conveyors, or pipes so the concrete ingredients will not be separated. Terminate such equipment in vertical downspouts, when necessary, to prevent segregation. Extend open troughs and chutes, if necessary, down inside the forms or through holes left in the forms.

Keep all transporting equipment clean and free of hardened concrete coatings. Discharge water used for cleaning clear of the concrete.

4.6.5. **Preparation of Surfaces**. Thoroughly wet all forms, prestressed concrete panels, T-beams, slab beams, and concrete box beams on which concrete is to be placed before placing concrete on them. Remove free water from the surface or beam lines before placing concrete. Provide surfaces that are in a moist, saturated surface-dry (SSD) condition when concrete is placed on them. Ensure the surface of the existing concrete is in an SSD condition just before placing subsequent concrete. Prewet the existing concrete by ponding water on the surface for 24 hr. before placing subsequent concrete. Use high-pressure water blasting to achieve

SSD conditions 15–30 min. before placing the concrete if ponding is not possible. An SSD condition is achieved when the surface remains damp when exposed to sunlight for 15 min.

Ensure the subgrade or foundation is moist before placing concrete for bridge approach slabs.

4.6.6. **Expansion Joints**. Construct joints and devices to provide for expansion and contraction as shown on the plans and in accordance with this Section and Item 454, “Bridge Expansion Joints.”

Prevent bridging of concrete or mortar around expansion joint material in bearings and expansion joints.

Use forms adaptable to loosening or early removal in construction of all open joints and joints to be filled with expansion joint material. Loosen these forms as soon as possible after final concrete set to permit free movement of the span without requiring full form removal and avoid expansion or contraction damage to the adjacent concrete.

Ensure that finished joints conform to the plan details with the concrete sections completely separated by the specified opening or joint material.

Remove all concrete within the joint opening soon after form removal and again where necessary after surface finishing to ensure full effectiveness of the expansion joint.

4.6.7. **Construction Joints**. A construction joint is formed by placing plastic concrete in direct contact with concrete that has attained its initial set. Monolithic placement means the manner and sequence of concrete placing do not create a construction joint.

Make construction joints of the type and at the locations shown on the plans. Do not make joints in bridge slabs not shown on the plans unless approved. Additional joints in other members are not permitted without approval. Place authorized additional joints using details equivalent to those shown on the plans for joints in similar locations.

Make construction joints square and normal to the forms unless otherwise required. Use bulkheads in the forms for all vertical joints.

Thoroughly clean the hardened concrete surface of all loose material, laitance, dirt, and foreign matter, and saturate it with water. Remove all free water and moisten the surface before concrete or bonding grout is placed against it. Ensure the surface of the existing concrete is in an SSD condition just before placing subsequent concrete. Prewet the existing concrete by ponding water on the surface for 24 hr. before placing subsequent concrete. Use high-pressure water blasting to achieve SSD conditions 15–30 min. before placing the concrete if ponding is not possible. An SSD condition is achieved when the surface remains damp when exposed to sunlight for 15 min.

Draw forms tight against the existing concrete to avoid mortar loss and offsets at joints.

Bonding agents are not required unless specified otherwise. Coat the joint surface with bonding mortar, grout, epoxy, or other material as shown on the plans or in conformance with other Items if a bonding agent is required. Provide Type V epoxy in accordance with DMS-6100 for bonding fresh concrete to hardened concrete. Place the bonding epoxy on a clean, dry surface, and place the fresh concrete while the epoxy is still tacky. Place bonding mortar or grout on a surface that is SSD and place the concrete before the bonding mortar or grout dries. Place other bonding agents in conformance with the manufacturer’s recommendations.

4.6.8. **Handling and Placing**. Minimize segregation of the concrete and displacement of the reinforcement when handling and placing concrete. Produce a uniform, dense, compact mass.

Do not allow concrete to free-fall more than 5 ft. Remove any hardened concrete splatter ahead of the plastic concrete.

Fill each part of the forms by depositing concrete as near its final position as possible. Do not deposit large quantities at one point and run or work the concrete along the forms.

Avoid cold joints in a monolithic placement. Sequence successive layers or adjacent portions of concrete so they can be vibrated into a homogeneous mass with the previously placed concrete before it sets.

4.6.9. **Consolidation**. Carefully consolidate concrete and flush mortar to the form surfaces using immersion type vibrators. Do not use vibrators that operate by attachment to forms or reinforcement except where approved on steel forms.

Vibrate the concrete immediately after deposit. Systematically space points of vibration to ensure complete consolidation and thorough working of the concrete around the reinforcement and embedded fixtures, and into the corners and angles of the forms. Insert the vibrator vertically where possible, except for slabs where it may be inserted in a sloping or horizontal position. Vibrate the entire depth of each lift, allowing the vibrator to penetrate several inches into the preceding lift. Do not use the vibrator to move the concrete to other locations in the forms. Do not drag the vibrator through the concrete. Thoroughly consolidate concrete along construction joints by operating the vibrator along and close to but not against the joint surface. Continue the vibration until the concrete surrounding reinforcements and fixtures is completely consolidated. Hand-spade or rod the concrete if necessary to ensure flushing of mortar to the surface of all forms. Concentrate vibration efforts along the beam lines when precast concrete panels are used for deck construction.

4.6.10. **Installation of Dowels and Anchor Bolts**. Install dowels and anchor bolts by casting them in place or by grouting with grout, epoxy, or epoxy mortar unless specified otherwise. Form or drill holes for grouting. Use only epoxy when installing horizontal dowels into the edges of slabs. Follow the manufacturer's recommended installation procedures for pre-packaged grout or epoxy anchor systems. Test anchors if required on the plans or by other Items.

Drill holes for anchor bolts to accommodate the bolt embedment required by the plans. Make holes for dowels at least 12 in. deep unless otherwise shown on the plans. Make the hole diameter at least twice the dowel or bolt diameter, but the hole need not exceed the dowel or bolt diameter plus 1-1/2 in. when using cementitious grout or epoxy mortar. Make the hole diameter 1/16–1/4 in. greater than the dowel or bolt diameter when using neat epoxy, unless specified otherwise by the epoxy manufacturer.

Thoroughly clean holes of all loose material, oil, grease, or other bond-breaking substance, and blow them clean with filtered compressed air. Use a wire brush followed by oil-free compressed air to remove all loose material from the holes, repeating as necessary until no more material is removed. Ensure holes are in a surface-dry condition when epoxy type materials are used and in a surface-moist condition when cementitious grout is used. Develop and demonstrate for approval a procedure for cleaning and preparing the holes for installation of the dowels and anchor bolts. Completely fill the void between the hole and dowel or bolt with grouting material. Follow exactly the requirements for cleaning in conformance with the product specifications for pre-packaged systems.

Provide a Type III epoxy in accordance with DMS-6100 when neat epoxy is used for anchor bolts or dowels. Provide Type VIII epoxy in accordance with DMS-6100 when an epoxy grout is used. Provide grout, epoxy, or epoxy mortar as the binding agent unless otherwise shown on the plans.

Provide other anchor systems as shown on the plans.

4.6.11. **Placing Concrete in Cold Weather**. Protect concrete placed under weather conditions where weather may adversely affect results. Permission given by the Engineer for placing during cold weather does not relieve the Contractor of responsibility for producing concrete equal in quality to that placed under normal conditions. If concrete placed under poor conditions is unsatisfactory, remove and replace it as directed at Contractor's expense.

Do not place concrete in contact with any material coated with frost or with a temperature of 32°F or lower. Do not place concrete when the ambient temperature in the shade is below 40°F and falling unless

approved. Place concrete when the ambient temperature in the shade is at least 35°F and rising or above 40°F.

Provide and install recording thermometers, maturity meters, or other suitable temperature measuring devices to verify all concrete is effectively protected. Maintain the temperature of the top surface of bridge slabs and top slabs of direct traffic culverts at 50°F or above for 72 hr. from the time of placement and above 40°F for an additional 72 hr.

Use additional covering, insulated forms, or other means and, if necessary, supplement the covering with artificial heating. Avoid applying heat directly to concrete surfaces. Cure as specified in Section 422.4.8., "Final Curing," during this period until all requirements for curing have been satisfied.

Have on hand all necessary heating and covering material, ready for use, before permission is granted to begin placement when impending weather conditions indicate the possible need for temperature protection. Distress caused by concrete drying out as a result of delayed set and strength gain associated with cold weather are a result of the Contractor's actions and are subject to repair in accordance with Section 422.4.10., "Defective Work."

4.6.12. **Placing Concrete in Hot Weather**. Use an approved Type B or Type D set retarding agent in all concrete for superstructures and top slabs of direct traffic culverts, except concrete containing slag cement, when the temperature of the air is above 85°F, unless otherwise directed.

Keep the concrete at or below the maximum temperature at time of placement as specified above. Sprinkle and shade aggregate stockpiles or use ice, liquid nitrogen systems, or other approved methods as necessary to control the concrete temperature.

4.6.13. **Placing Concrete in Superstructure**. Place simple span bridge slabs without transverse construction joints by using either a self-propelled transverse finishing machine or a mechanical longitudinal screed unless otherwise shown on the plans. Use of manually operated screeding equipment may be permitted for small placements or for unusual conditions such as narrow widening, variable cross-slopes, or transitions. Support the screed adequately on a header or rail system stable enough to withstand the longitudinal or lateral thrust of the equipment. Adjust the profile grade line as necessary to account for variations in beam camber and other factors to obtain the required slab thickness and concrete cover over the slab reinforcement. Set beams and verify their surface elevations in a sufficient number of spans so that when adjustment is necessary, the profile grade line can be adjusted over suitable increments to produce a smooth riding surface. Take dead load deflection into account in setting the grades of headers and rail systems. Use construction joints when required or permitted for slab placements on steel or prestressed concrete beams, as shown on the plans. Release falsework under the spans before placing concrete on steel girder or truss spans, and swing the spans free on their permanent supports.

Provide additional camber to offset the initial and final deflections of the span as shown on the plans for concrete flat slab, concrete slab, and girder spans cast in place on falsework. Provide camber of approximately 3/8 in. for 30-ft. spans and 1/2 in. for 40-ft. spans to offset initial and final deflections for concrete slab and girder spans using pan forms, unless otherwise directed. Provide a camber of 1/8 in. for 10-ft. spans but no more than 1/2 in. for concrete flat slab, concrete slab, and girder spans not using pan forms when dead load deflection is not shown on the plans.

Provide a camber of 1/4 in. in addition to deflection for slabs without vertical curvature on steel or prestressed concrete beams. Provide camber for specified vertical curvature and transverse slopes.

Make one or more passes with the screed over the bridge slab segment before placing concrete on it to ensure proper operation and maintenance of grades and clearances. Use an approved system of checking to detect any vertical movement of the forms or falsework. Maintain forms for the bottom surface of concrete slabs, girders, and overhangs to the required vertical alignment during concrete placing.

Level, strike off, and screed the surface while carrying a slight excess of concrete ahead of the screed to fill all low spots as soon as the concrete has been placed and vibrated in a section wide enough to permit

working. Move longitudinal screeds across the concrete with a saw-like motion while their ends rest on headers or templates set true to the roadway grade or on the adjacent finished slab. Move transverse screeds longitudinally approximately 1/5 of the drum length for each complete out-and-back pass of the carriage. Screed the surface of the concrete enough times and at intervals to produce a uniform surface true to grade and free of voids.

Fog unformed surfaces of slab concrete in bridge slabs and in top slabs of direct traffic culverts from the time of initial strike-off of the concrete until finishing is completed and required interim curing is in place. Do not use fogging to add finishing water, and do not work moisture from the fog spray into the fresh concrete.

Retard the concrete for simple spans only if necessary to complete finishing operations or as required by this Section. Bring the top of curb and sidewalk section to the correct camber and alignment when filling curb forms and finish them in accordance with this Item.

4.6.13.1. **Transverse Screeding**. Install rails for transverse finishing machines that are supported from the beams or girders so the supports may be removed without damage to the slab. Prevent bonding between removable supports and the concrete in an acceptable manner. Do not allow rail support parts that remain embedded in the slab to project above the upper mat of reinforcing steel. Rail or screed supports attached to I-beams or girders are subject to the requirements of this Item. Place concrete at a minimum rate of 30 ft. of bridge slab per hour for transverse screeding unless otherwise shown on the plans. Deposit concrete parallel to the skew of the bridge so all girders are loaded uniformly along their length. Deposit slab concrete between the exterior beam and adjacent beam before placing concrete in the overhang portion of the slab. Furnish personnel and equipment capable of placing, finishing, and curing the slab at an acceptable rate to ensure compliance with the specifications. Place concrete in transverse strips. Start placement at the lowest end on profile grades greater than 1-1/2%.

At the Contractor's option, attach a pan drag and either a carpet or burlap drag to the screed assembly to float and provide surface micro-texture in one operation. Adjust the contact pressure of the pan drag to smooth high spots and fill any depressions left by the screed. Adjust the weight or position of the carpet or burlap drag to produce a smooth sandy micro-texture without blemishes, marks, or scratches deeper than 1/16 in. Fill screed rail support holes and holes from the Engineer's depth checks for slab thickness and reinforcing cover with concrete and finish them to match the rest of the slab.

4.6.13.2. **Longitudinal Screeding**. Use of temporary intermediate headers will be permitted for placements over 50 ft. long if the rate of placement is rapid enough to prevent a cold joint and if these headers are designed for easy removal to permit satisfactory consolidation and finish of the concrete at their locations, unless otherwise shown on the plans. Deposit slab concrete between the exterior beam and the adjacent beam before placing concrete in the overhang portion of the slab. Place concrete in longitudinal strips starting at a point in the center of the segment adjacent to one side, except as this Section specifies, and complete the strip by placing uniformly in both directions toward the ends. Start placing at the lowest end for spans on a profile grade of 1-1/2% or more. Use strips wide enough that the concrete within each strip remains plastic until placement of the adjacent strip. Place the concrete in proper sequence to be monolithic with the adjacent longitudinal strips of the slabs where monolithic curb construction is specified.

4.6.13.3. **Placements on Continuous Steel Units**. Place slabs on continuous steel units in a single, continuous operation without transverse construction joints using a self-propelled transverse finishing machine or a mechanical longitudinal screed, unless otherwise shown on the plans. Retard the initial set of the concrete sufficiently to ensure concrete remains plastic in at least three spans immediately preceding the slab being placed. Use construction joints, when required for slab placements on steel beams or girders, as shown on the plans. Ensure the previously placed concrete attains a compressive strength of 3,000 psi when staged placement of a slab is required on the plans before placing the next stage concrete. Multiple stages may be placed in a single day if approved. Use an approved placing sequence that will not overstress any of the supporting members where plans permit staged placing without specifying a particular order of placement.

4.6.13.4. **Slab and Girder Units**. Place girders, slab, curbs of slab, and girder spans monolithically unless otherwise shown on the plans. Fill concrete girder stems first and place the slab concrete within the time limits specified in this Item. Place concrete in the stems for a short distance if using a transverse screed, and then place the

concrete in transverse strips. Fill the outside girder stem first, beginning at the low end or side, if using a longitudinal screed, and continue placement in longitudinal strips.

4.7. **Finish and Interim Curing of Bridge Slabs**. Obtain approval of the proposed interim curing methods, equipment, and materials at the pre-pour meeting before placing concrete. Consider forecast weather conditions to determine the interim curing methods to use.

Use work bridges or other suitable facilities to perform all finishing operations and to provide access, if necessary, for the Engineer to check measurements for slab thickness and reinforcement cover.

Work the screeded surface to a smooth finish using a long-handled wood or metal float, or hand-float it from work bridges over the slab. Floating may not be necessary if the pan float attached to a transverse screed produces an acceptable finish. Avoid overworking the surface of the concrete. Avoid use of finish water.

Perform sufficient checks, witnessed by the Engineer, using a long-handled 10-ft. straightedge on the plastic concrete to ensure the final surface will be within specified tolerances. Make the check with the straightedge parallel to the centerline. Lap each pass half over the preceding pass. Remove all high spots and fill and float all depressions more than 1/16 in. deep with fresh concrete. Continue checking and floating until the surface is true to grade and free of depressions, high spots, voids, or rough spots. Fill screed-rail support holes with concrete and finish them to match the top of the slab.

Provide a uniform micro-texture using a carpet drag, burlap drag, or broom finish. Finish the surface to a smooth sandy texture without blemishes, marks, or scratches deeper than 1/16 in. Apply the surface texturing using a work bridge or platform immediately after completing the straightedge checks. Draw the carpet or burlap drag longitudinally along the concrete surface, adjusting the surface contact area or pressure to provide a satisfactory coarsely textured surface. A broom finish may be performed using a fine-bristle broom transversely. For bridge approach slabs, the carpet drag, burlap drag, or broom finish may be applied either longitudinally or transversely.

Evaporation protection is required if the evaporation rate exceeds 0.10 lb. per square foot per hour in accordance with the *Evaporation Calculation for Concrete Worksheet* as shown on the Department's website, in accordance with the evaporation rate nomograph in PCA's *Design and Control of Concrete Mixtures*, or if shown on the plans.

4.7.1. **Evaporation Protection**. Use one of the following methods for evaporation protection.

4.7.1.1. **Evaporation Retardant**. Coat the concrete surface immediately after the carpet or burlap drag, or broom finish with a single application of evaporation retardant at a rate recommended by the manufacturer. Do not allow more than 10 min. to elapse between the texturing at any location and application of evaporation retardant. The evaporation retardant may be applied using the same work bridge used for surface texturing. Do not work the concrete surface once the evaporation retardant has been applied.

4.7.1.2. **Wet Burlap**. Place pre-wet burlap no more than 10 ft. behind the finishing operation. A work bridge may be required to avoid marring the surface. Ensure the wet burlap covers the entire surface. Use sprayers, hoses, sprinklers, or other similar methods to keep the burlap continuously wetted until application of the final curing.

4.7.2. **Interim Curing**. Apply interim curing using one of the following options after applying the evaporation protection (if needed).

4.7.2.1. **Membrane Cure**. Apply membrane interim curing at a rate of approximately 180 sq. ft. per gallon. Apply before the water sheen disappears but do not place over standing water. Fog as necessary to maintain the wet sheen. Do not spray membrane curing on a dry surface.

4.7.2.2. **Wet Burlap**. Place pre-wet burlap no more than 10 ft. behind the finishing operation. Burlap used for evaporation protection will also be considered as the interim curing.

4.8. **Final Curing**. Obtain approval of the proposed curing methods, equipment, and materials at the pre-pour meeting before placing concrete. Inadequate curing or facilities may delay all concrete placements on the project until remedial action is taken. Apply final curing as soon as possible after interim curing without damaging the surface finish. Check the adequacy of the curing each day of the curing period. Take corrective action or modify the curing methods as needed to maintain a moist concrete surface.

A curing day is a calendar day when the temperature, taken in the shade away from artificial heat, is above 50°F for at least 19 hr. or, on colder days, if the temperature of all surfaces of the concrete is maintained above 40°F, for the entire 24 hr. The required curing period begins when all concrete has attained its initial set. Tex-440-A may be used to determine when the concrete has attained its initial set.

Cure all superstructure concrete according to the following, unless otherwise shown on the plans:

- Concrete using Type I or Type III cement: 8 days
- Concrete using Type I/II or Type II cement: 10 days
- Concrete with any type of supplementary cementing materials: 10 days

Place polyethylene sheeting, burlap-polyethylene blankets, laminated mats, or insulating curing mats in direct contact with the slab when the air temperature is expected to drop below 40°F during the first 72 hr. of the curing period. Weigh down these curing materials using dry mats to maintain direct contact with the concrete and provide insulation against cold weather. Supplemental heating or insulation may be required in cold and wet weather if the insulating cotton mats become wet or the concrete drops below the specified curing temperature. Avoid applying heat directly to concrete surfaces.

Use one of the following water curing methods for final curing. Keep all exposed surfaces of the concrete wet continuously for the required curing time. Use water for curing that meets the requirements for concrete mixing water in accordance with Section 421.2.5., “Water.” Do not use seawater or water that stains or leaves an unsightly residue.

4.8.1. **Cotton Mats**. Keep the concrete continuously wet by maintaining wet cotton mats in direct contact with the concrete for the required curing time. Weight the mats adequately to provide continuous contact with all concrete. Cover surfaces that cannot be cured by direct contact with mats, forming an enclosure well anchored to the forms or ground so outside air cannot enter the enclosure. Provide sufficient moisture inside the enclosure to keep all surfaces of the concrete wet. Use of soaker hoses and plastic covering is acceptable provided the concrete surface remains continuously wet for the required curing duration.

4.8.2. **Burlap Mats**. The burlap used for interim curing may also be used for final curing if kept continuously wetted and completely covered with plastic sheeting. Overlap plastic sheeting and weigh down sufficiently so air cannot enter underneath the plastic.

4.8.3. **Burlap-Polyethylene Mats**. Place these mats over soaker hoses or by other similar methods to keep the concrete surface wetted for the duration of the curing period. Overlap the mats and weight down sufficiently so air cannot enter underneath the mats.

4.9. **Removal of Forms and Falsework**. Forms for vertical surfaces may be removed after the concrete has aged 12 hr. after initial set, provided the removal can be executed without damage to the concrete, unless otherwise directed.

Remove forms for inside curb faces and for bridge rails whenever removal can be executed without damage to the curb or railing.

Leave in place weight-supporting forms and falsework spanning more than 1 ft., except as directed otherwise, until the concrete has attained a compressive strength of 2,500 psi. Remove forms for other structural components as necessary.

Forms or parts of forms may be removed only if constructed to permit removal without disturbing forms or falsework required to be left in place for a longer period on other portions of the structure.

Remove all metal appliances used inside forms for alignment to a depth of at least 1/2 in. from the concrete surface. Make the appliances so that metal may be removed without undue chipping or spalling of the concrete, and so that it leaves a smooth opening in the concrete surface when removed. Do not burn off rods, bolts, or ties.

Remove all forms and falsework unless otherwise directed.

Apply an ordinary surface finish as the final finish to the bottom of bridge slabs between girders or beams, and vertical and bottom surfaces of interior concrete beams or girders, unless otherwise noted.

Form marks and chamfer edges do not need to be smoothed for the bottom of bridge slabs between girders or beams. Remove all fins, runs, drips, or mortar from surfaces that will be exposed.

4.10. **Defective Work**. The Contractor is responsible for the ride quality of the finished bridge slab. The Engineer will use a 10-ft. straightedge (1/8 in. in 10 ft.) to verify ride quality and determine locations where corrections are needed. Submit a plan for approval to produce a ride of acceptable quality if the Engineer determines the ride quality is unacceptable. Make all corrections for ride before saw-cutting grooves.

Repair defective work as soon as possible. Remove and replace at the expense of the Contractor any defect that cannot be repaired to the satisfaction of the Engineer.

The Engineer will inspect the deck or slab for plastic shrinkage and settlement cracking after completion of final curing and within 5 days after curing mats are removed. Seal any noted shrinkage cracks attributable to Contractor placing, curing, and finishing practices as well as transverse cracks over interior bents in continuous units using gravity feed crack repair as directed in accordance with Item 780, “Concrete Crack Repair,” at no cost to the Department.

4.11. **Final Surface Texture**. Saw-cut grooves in the hardened concrete of bridge slabs, bridge approach slabs, and direct traffic culverts to produce the final texturing after completion of the required curing period, unless otherwise specified. Cut grooves parallel to the structure centerline, unless otherwise shown on plans. Cut grooves along the slab within 18 in. of the barrier rail, curb, or median divider. Adjust groove cutting at skewed metal expansion joints in bridge slabs so all grooves end within 6 in. of the joint, measured perpendicular to the centerline of the metal joint. Leave no ungrooved surface wider than 6 in. adjacent to either side of the joint. Cut grooves continuously across construction joints or other joints in the concrete less than 1/2 in. wide. Apply the same procedure described above where barrier rails, curbs, or median dividers are not parallel to the structure centerline to maintain the 18-in. maximum dimension from the end of the grooves to the gutter line. Cut grooves continuously across formed concrete joints. Provide either a carpet drag or broom finish for micro-texture when saw-cut grooves are not required on the plans. In this case, ensure an adequate and consistent micro-texture is achieved by applying enough weight to the carpet and keeping the carpet or broom from getting plugged with grout. For surfaces that do not have adequate texture, the Engineer may require corrective action including diamond grinding or shot blasting.

Give a carpet drag, burlap drag, or broom finish to all concrete surfaces to be overlaid when the plans call for a concrete overlay (CO) to be placed on the slab (new construction). Saw-grooving is not required in this case. Provide an average texture depth for the finish of approximately 0.035 in. with no individual test falling below 0.020 in., unless otherwise shown on the plans, when tested in accordance with Tex-436-A. Revise finishing procedures to produce the desired texture if the texture depth falls below what is intended.

Give all concrete surfaces to be covered a lightly textured broom or carpet drag finish when the plans require an asphalt seal, with or without overlay, on the slab (new construction). Provide an average texture depth of approximately 0.025 in. when tested in accordance with Tex-436-A.

5. MEASUREMENT

Reinforced concrete slabs or decks on girders, beams, slab beams, double-T beams, or box beams placed under this Item will be measured by the square foot of slab surface area using the nominal dimensions and

configuration shown on the plans. Transverse measurement will be made from outer edge of slab to outer edge of slab (including raised median and sidewalk sections). Longitudinal measurement will be made between ends of units or spans. Diaphragms, haunch concrete, reinforcement, and optional steel diaphragms will be considered as a portion of the slab unless otherwise shown on the plans. An estimated quantity for the haunch between the slab and beams will be included for the Contractor's information only. No measurement will be made during construction for variation in the amount of haunch concrete due to variations in camber of the beams.

Approach slabs and cast-in-place superstructure elements including flat slabs, slab and girder units (pan formed), and shear keys will be measured by the cubic yard. For slab and girder spans using pan forms, a quantity will be included for the screed setting required to provide proper camber in the roadway surface after form removal.

This is a plans quantity measurement Item. The quantity to be paid is the quantity shown in the proposal, unless modified by Article 9.2., "Plans Quantity Measurement." Additional measurements or calculations will be made if adjustment of quantities is required.

The quantities of concrete and reinforcing steel shown on the plans are based on a conventionally formed slab. These quantities include amounts for concrete diaphragms, brackets and other required attachments, and haunch concrete when required, based on the profile grade, theoretical camber, and dead load deflection of the beams. No additional measurement will be made for concrete or reinforcing steel due to a variation in camber of the beams from theoretical camber, or for additional quantities required by optional methods of forming.

Additional concrete that may be required by an adjustment of the profile grade line during construction, to ensure proper slab thickness, will not be measured for payment.

6. PAYMENT

The work performed and materials furnished in accordance with this Item and measured as provided under "Measurement" will be paid for at the unit price bid for the various superstructure elements specified. This price is full compensation for furnishing, hauling, mixing, placing, curing, and finishing concrete; furnishing and placing reinforcing steel; grouting and pointing; furnishing and placing drains and expansion joint material (except where specifically furnished under another Item); furnishing and placing metal flashing strips; forms (removable and permanent) and falsework; prestressed concrete panels; furnishing and placing concrete and reinforcement for raised medians, sidewalks, sign mounts, luminaire brackets, and other concrete appurtenances; removing designated portions of existing slab; cleaning, bending, and cutting exposed existing reinforcing steel; welding reinforcing steel; doweling; cleaning and preparing concrete surfaces; and equipment, labor, tools, and incidentals.

Price will be adjusted in accordance with Article 421.6., "Measurement and Payment," when required to address non-compliance of project acceptance testing.

Diaphragm concrete will not be paid for directly, but will be subsidiary to the slab unless otherwise shown on the plans.

Structural steel, anchor bolts, armor joints, sealed expansion joints, rail (including the concrete parapet portion), and concrete median barrier will be measured and paid for in conformance with pertinent bid items.

In addition to the work described above, for extending structures the unit price bid is full compensation for removing and disposing of the designated portion of the existing structure; removing, stockpiling, and replacing headwall units for reuse; cleaning, bending, and cutting of exposed reinforcing steel; splicing or welding of new reinforcing steel to existing reinforcing steel; installation of dowels; and cleaning and preparing existing concrete surfaces.

Item 424
Precast Concrete Structural Members (Fabrication)

1. DESCRIPTION

Fabricate precast prestressed and precast nonstressed concrete members. This Item, in conjunction with DMS-7300, "Precast Concrete Fabrication Plants," applies to both multi-project and project-specific fabrication plants. For this Item, the following definitions apply.

- **Box Beams**. For this specification, all box beams, X-beams, slab beams, and decked slab beams are referred to as box beams.
- **I-Beams**. For this specification, all I-girders and bulb-tee beams are referred to as I-beams.
- **Major Prestressed Members**. Includes all other prestressed members not listed as minor prestressed members, including by not limited to I-beams, U-beams, box beams, cylindrical piling, bent caps, and abutments.
- **Minor Prestressed Members**. Includes piling and bridge deck panels.
- **Multi-Project Fabrication Plant**. A facility at an offsite location that fabricates precast prestressed or precast nonstressed members. This definition also applies to single Contract offsite facilities.
- **Nonstressed Members**. Precast concrete members that have not been pre-tensioned or post-tensioned.
- **Post-Tensioning**. The application of prestressing force to the tensioning devices after concrete has hardened.
- **Prestressed Members**. Precast concrete members fabricated by the process of pre-tensioning, post-tensioning, or a combination of both methods.
- **Prestressing**. The introduction of internal stresses (pre-tensioning or post-tensioning) into a structural member by tensioning and anchoring strands or bars, to counteract the stresses resulting from the applied load.
- **Pre-Tensioning**. The application of prestressing force to the tensioning devices before casting concrete.
- **Project-Specific Fabrication Plant**. A temporary facility at or near the project location that fabricates precast prestressed or precast nonstressed members for only one Contract. This definition may be applied to temporary facilities that fabricate for multiple adjacent Contracts, if approved.
- **Self-Consolidating Concrete (SCC)**. A highly workable concrete that can flow through densely reinforced or complex structural elements under its own weight and adequately fill voids without segregation, excessive bleeding, or the need for vibration.
- **Temperature Probe**. Thermocouple for measuring concrete temperature or air temperature.
- **Temperature Recording Device**. Data logger for recording temperatures from the temperature probes.
- **Tendon**. Any single unit used to apply prestressing force to the member. For post-tensioned units, a tendon is a bar or group of strands with common end anchorage.

2. EQUIPMENT

2.1. **Field Office and Inspection Laboratory**. Provide a field office and inspection laboratory for multi-project and project-specific fabrication plants in accordance with DMS-7300.

2.2. **Furnishings and Laboratory Equipment**. Provide furnishings and laboratory equipment for multi-project and project-specific fabrication plants in accordance with DMS-7300.

2.3. **Plant Facilities**. Provide plant facilities for multi-project and project-specific fabrication plants that produce prestressed members in accordance with DMS-7300.

2.4. **Batch Plant**. Provide batch plant onsite for SCC production unless otherwise approved. Do not use volumetric mixers for SCC.

3. MATERIALS

Furnish materials in accordance with Item 425, "Precast Prestressed Concrete Structural Members," and other pertinent Items.

4. CONSTRUCTION

4.1. **General Requirements**.

4.1.1. **Shop Drawings**. Prepare and electronically submit shop drawings before fabrication in accordance with the *Guide to Shop Drawing Submittals* available on the Bridge Division website. Provide one complete approved 11 × 17 in. set in hardcopy to the Department inspector at the fabrication plant. Stamp it "For Materials and Tests Division Inspector." The Engineer may require additional complete hardcopy sets.

Provide a title block on each sheet in the lower right corner with the following information:

- sheet index data shown on lower right corner of the plans,
- sheet numbering for shop drawings,
- name of structure or stream,
- name of owner or developer,
- name of fabricator or supplier, and
- name of Contractor.

4.1.1.1. **Prestressed Members**. Furnish shop drawings for prestressed members unless otherwise shown on the plans or in conformance with other Items. Submit the proposed designs on forms furnished by the Department when optional designs are permitted by the plans. Obtain approval of these designs before casting. Approval of optional designs does not relieve the Contractor from the responsibility of furnishing a satisfactory completed structure. Provide submittals for precast post-tensioned members in accordance with this specification and Item 426, "Post-Tensioning."

4.1.1.2. **Nonstressed Members**. Furnish shop drawings for nonstressed members when required by the plans or pertinent Items.

4.1.2. **Plant Approval**.

4.1.2.1. **Plant Submittals**. Provide submittals in accordance with DMS-7300 for each particular plant operation. This requirement does not apply to project-specific nonstressed member fabrication plants.

4.1.2.2. **Plant Audits**. Multi-project and project-specific fabrication plants must successfully complete initial and periodic Department-directed plant audits in accordance with DMS-7300.

4.1.3. **Notice of Beginning Work**. Give adequate notice before beginning work as specified in Table 1. Include a schedule for all fabrication processes and dates when inspections are to occur.

Table 1
Notice of Beginning Work

Plant Location	Notice Required
In Texas	7 days
In the contiguous United States	21 days
Outside the contiguous United States	60 days

Perform no Department work in the plant before the Engineer authorizes fabrication. The Contractor must bear all Department travel costs when changes to their fabrication or inspection schedules are not adequately conveyed to the Department. When fabrication is performed outside the contiguous 48 states, the additional cost of inspection will be in accordance with Article 6.4., "Sampling, Testing, and Inspection."

4.1.4. **Personnel Qualifications**. Provide qualified personnel in accordance with DMS-7300 for each particular plant operation.

4.1.5. **Quality Responsibilities**. The quality responsibilities for the Contractor for each particular plant operation will be in accordance with DMS-7300.

4.2. **Fabrication**. Prepare a casting schedule on Department-approved forms in accordance with DMS-7300, and submit it daily to the Department before fabrication. This requirement does not apply to project-specific minor prestressed member or project-specific nonstressed member fabrication plants. Perform fabrication during daylight hours unless the production site has an approved lighting system. Submit lighting details electronically to the Engineer for review before installing lighting system. Allow for plant and Department inspection in accordance with Item 6, "Control of Materials."

4.2.1. **Forms**. Design forms to prevent damage to the concrete from restraint as the concrete shrinks, from form expansion and contraction from thermal changes, from stripping operations, and from dimensional changes due to pre-tensioning. Forms, regardless of material, must conform to the profiles, dimensions, and tolerances of the finished product as shown on the plans and in accordance with this Item. Maintain forms free of dents, grease, or other foreign materials that may affect the appearance of the member, and clean forms thoroughly before each casting operation and immediately before applying a form-release agent.

4.2.1.1. **External Forms**. Construct side and bottom forms of steel unless otherwise approved or shown on the plans. Timber forms, when permitted, must meet the requirements of Section 420.4.4., "Forms." End headers may be of other material as approved.

Construct forms with sufficient thickness, external bracing and stiffeners, and anchorage to withstand the forces generated during concrete placement and consolidation. Do not stabilize forms with bracing and holding devices that will remain in the finished member.

Provide corners with a chamfer or radius as shown on the plans.

Maintain forms sufficiently mortar-tight to prevent damage that requires repair to the finished product. Where sections of forms will be joined, an offset of 1/16 in. for flat surfaces and 1/8 in. for corners and bends is permitted. Longitudinal form joints in prestressed concrete beams are not permitted except for the side forms of slab beams, decked slab beams, box beams, and X-beams, or as shown on the plans. Do not allow vertical or horizontal gaps or offsets to exceed 1/4 in. between adjacent sections of built-up end headers.

Check and maintain the grade and alignment of forms each time they are set and during placement of concrete.

Apply a form-release agent, in conformance with the manufacturer's recommendations, to the facing of forms before placing concrete. Use a form-release agent that facilitates form removal and does not affect any required coating, painting, or color-staining operations. Do not use materials that appreciably stain or react with the concrete. Remove excess form-release agent from the form surface before casting, and ensure it does not contaminate strands, reinforcing steel, and embedments. Use a clear form-release agent of the

same brand throughout the casting of retaining wall panels per structure, unless it can be shown that a different form-release agent does not change the appearance of the concrete.

Construct the forms to facilitate removal of members without damage to the concrete.

Construct and maintain the soffit (liner) to provide a maximum 1/4-in. variation from the theoretical plane, and do not allow the soffit to vary more than 1/4 in. between any two points in any 50-ft. length.

At the Contractor's option, construct side forms for bridge deck panels and prestressed piling with a draft for ease of product removal. Maintain product dimensional tolerances shown in Table 3. A maximum 1/4-in. draft is allowed for bridge deck panels.

4.2.1.2. **Internal Forms**. Use solid expanded polystyrene conforming to ASTM C578, Type I for forming internal voids. The form material must be inert, non-biodegradable, non-absorptive, and strong enough to maintain sufficient rigidity to withstand the forces generated during concrete placement and consolidation without damage. Other materials for forming internal voids may be used when approved. Provide certification of conformance for void forms. The Engineer may require samples to be submitted when needed.

Anchor internal void forms to prevent movement or misalignment while placing concrete. Provide hold-down devices for all types of void forms at 30-in. maximum spacing unless otherwise approved. Do not use internal hold-down or lateral bracing devices that will remain in the finished member unless approved. Provide enough bearing area on the void form to prevent penetration of hold-down devices into the void form. Splice void form sections to prevent separation or misalignment during concrete placement and consolidation operations.

During casting, verify and document void form placement at 10-ft. maximum spacing using an approved method.

Drain prestressed concrete U-beams and voided box beams through the bottom flange by forming holes in each voided area as shown on the plans.

4.2.2. **Prestressing**. Perform pre-tensioning in accordance with this Item and post-tensioning in accordance with Item 426.

4.2.2.1. **Prestressing Equipment**. Furnish hydraulic jacks with sufficient capacity for prestressing the steel. Equip the jacks with instruments for monitoring the hydraulic pressure. Provide gauges at least 6 in. in diameter and with means to prevent the gauge pointer from fluctuating. Electronic pressure transducers with digital indicators may be used. Pressure gauges or electronic pressure indicators must indicate the load directly to 1% of the maximum gauge or sensor/indicator capacity, or 2% of the maximum load applied, whichever is smaller.

Calibrate each jack and its gauge with the cylinder extension in the approximate position at final jacking force. Jacks and gauges for post-tensioning and single-strand pre-tensioning must be calibrated as a unit. Have certified calibration charts furnished by an independent laboratory and with each jack and gauge used on the project. Provide certified calibration of each ram before starting stressing operations on the project and:

- every 6 mo. thereafter for post-tensioning operations,
- every 12 mo. thereafter for pre-tensioning operations, and
- as requested.

The calibration frequency for multiple-strand pre-tensioning equipment may be extended to every 24 mo. thereafter if an approved master gauge system monitors it. The master gauge must check this equipment when suspect results occur and at least every 6 mo. Calibrate the master gauge in conformance with the manufacturer's recommendations and at least every 12 mo.

Recalibrate jacks and gauges when a malfunction occurs; when repairs such as replacing the seals, changing the length of the hydraulic lines, or changing the pump occur; or when using gauges that have not been calibrated with the jack. Extra compensation will not be allowed for the initial or subsequent calibrations.

Post-tensioning jacks must have provisions for measuring tendon elongation directly on the strand or bar. The jacks must be capable of slow release of force to properly seat the tendon anchors.

Single-strand stressing jacks for pre-tensioning must have provisions for measuring the elongation directly on the strand.

Multi-strand detensioning jacks must have sufficient capacity and throw to permit simultaneous release of the entire load in the strands. Use an approved single-strand flame-release procedure to release the remaining load if there is not enough throw in the multi-strand jacks to release all load in the strands.

4.2.2.2. **Pre-Tensioning**. Pre-tension all strands to a uniform initial load between 5% and 25% of the final load, unless otherwise approved. Apply the load within a tolerance of:

- ±100 lb. per strand if the designated initial load is less than or equal to 10% of the final load, or
- ±200 lb. per strand if the designated initial load is greater than 10% of the final load.

Measure the initial load with a calibrated dynamometer or other suitable instrument.

Do not allow the modulus of elasticity of individual strands to vary more than 1% from each other when multiple-strand tensioned. Use a weighted average modulus of elasticity of strands to calculate elongation for multiple-strand tensioning operations.

Establish reference marks on the strand for measuring elongation after initial tensioning. Provide means for measuring the elongation of the strand to an accuracy of 1% of the theoretical elongation or 1/8 in., whichever is smaller. Establish independent references on the strand adjacent to each anchorage, to indicate slippage that may occur between the time of initial stressing and final release of the strands.

Do not allow the stress in the strand to exceed 80% of the specified ultimate tensile strength of the strand at any time.

Do not use any portion of the strand that has been previously gripped with chucks in the length of strand to be tensioned, except where gripped with chucks during initial tensioning. Do not drive over prestressing strand.

Strand chucks designed with spring caps must be used with the spring caps. Visually inspect strand chucks that are not equipped with spring caps to ensure all wedges are evenly seated after applying initial load. Correct unevenly seated wedges by releasing the stress, repositioning wedges, and reapplying the initial load.

Failure of individual wires in a seven-wire strand is acceptable if the total area of wire failure is not more than 2% of the total cross-sectional area of all strands in the member, and if no more than one wire fails in any single strand. Any setup with one or more broken wires must be examined by a licensed professional engineer or Quality Control Supervisor (as defined in DMS-7300) to determine the cause before continuing stressing operations on the particular casting line.

4.2.2.2.1. **Strand Splicing**. Do not splice draped strands. One splice per straight strand will be permitted subject to the following.

- Locate splices outside the members.
- Splice strands with the lay or twist in the same direction to avoid unraveling.
- Splice all straight strands in a multiple-strand tensioning operation so an adjustment can be made for the average seating loss.

- Cut strand ends to be spliced with shears, abrasive saws, or grinders to remove regions where chucks were previously seated. Cut in the same manner at least 12 in. from strand ends to be spliced that were previously flame cut.

4.2.2.2.2. **Single and Multiple Straight Strand Tensioning**. After initial tensioning, apply the required load to the strands as shown on the plans by means of single-strand or multiple-strand hydraulic jacks equipped with calibrated gauges. Verify the final load in the strands by observing either the gauge pressure or elongation and independently checking the other. The final load and elongation must agree within 5% of the computed theoretical values. Additionally, the final load and elongation must agree algebraically with each other within 5%. Suspend tensioning operations until the problem has been identified and corrected in the event of discrepancies exceeding these tolerances.

Verify uniform application of load to strands for multiple strand-tensioning systems by measuring the movement on opposite sides of the anchorage.

4.2.2.2.3. **Draped Strand Tensioning**. Verify the intermediate load by observing either the gauge pressure or elongation and independently checking the other when draped strands are tensioned in a straight or partially draped position before application of final load. If strands are tensioned in the final position, intermediate or final load and elongation must agree within 5% of the computed theoretical values. Additionally, the intermediate or final load and elongation must agree algebraically within 5% of each other. Suspend tensioning operations until the problem has been identified and corrected in the event of discrepancies exceeding these tolerances.

After application of final load, measurements on individual draped strands to establish differential stresses at selected points on the member will be averaged at a cross-section of the member. The averages must be within 5% of the theoretical elongation. The measured elongation of any individual draped strand must not vary from the theoretical elongation by more than 10% at any measured cross-section. Suspend tensioning operations until the problem has been identified and corrected in the event of discrepancies exceeding these tolerances.

Other methods to measure the intermediate load and final load in the draped strands may be submitted for approval.

4.2.2.2.4. **Strand Debonding**. Encase strands in plastic sheathing along the entire debonded length, when shown on the plans, and seal the ends with waterproof tape. Use split plastic sheathing only if the seam is sufficiently sealed with waterproof tape to prohibit grout infiltration. Use sheathing that will not react with the surrounding concrete.

Full-length debonding of straight strands will be approved on an individual basis. Full-length debonding, when permitted, must be symmetrical about the vertical centerline of the beam and limited to 10% of the total number of straight strands or six straight strands, whichever is less. Do not debond draped strands full length. When using a concrete anchor block to combine strand patterns, the same criteria apply.

4.2.2.3. **Combined Pre-Tensioning and Post-Tensioning**. When the plans call for a combination of pre-tensioning and post-tensioning, all the requirements for pre-tensioning in this specification and for post-tensioning in Item 426 apply.

4.2.3. **Placing Reinforcing Steel**. Place reinforcing steel in accordance with Item 440, “Reinforcement for Concrete.” Reinforcing steel projection outside the member must not be more than 1/2 in. or less than 3/4 in. from plan dimension unless otherwise approved. Do not damage sheathing for strand debonding. Do not tie reinforcing steel to debonded strand regions.

Weld steel components in accordance with Item 441, “Steel Structures.”

4.2.4. **Quality of Concrete**. Provide concrete in accordance with Item 421, “Hydraulic Cement Concrete.” Use the class of concrete shown on the plans or in the pertinent Item for each type of structure or unit. Provide

concrete meeting the approved mix design water-cement ratio. SCC is not allowed for project-specific fabrication plants unless approved. Mix concrete for 1 min. for 1 cu. yd. and 15 sec. for each additional cubic yard of rated capacity of the mixer. Count the mixing time from the time all materials are in the drum. Increase mixing time if necessary to achieve a uniform mix. Control concrete by compressive strength tests of cylinders or other pertinent performance tests detailed on the plans or pertinent Items. Concrete compressive-strength test cylinders will be made, cured, and tested in accordance with Tex-704-I. Cure release-of-tension strength cylinders in accordance with Tex-715-I when match-cure technology is used.

High-strength concrete (f'_c > 9,000 psi) is accepted based on 56-day compressive strength testing. Concrete design-strength test cylinders for high-strength concrete will be made, cured, and tested in accordance with Tex-704-I.

Product with concrete that fails to meet minimum design compressive strength requirements will be reviewed. Concrete that has been determined to be structurally adequate may be accepted at an adjusted price based on the formula in Article 421.6., "Measurement and Payment." If the Engineer requires cores be taken to determine the strength of the in-situ concrete, the coring will be at the Contractor's expense and in accordance with Tex-424-A. All cores from precast members must meet 100% of the minimum design compressive strength requirements. For concrete that has been determined to be structurally adequate, coring of the in-situ concrete will not be allowed for the purpose of avoiding the price adjustment. The Department may require reimbursement for testing of cores. Testing by an approved commercial testing laboratory will be at the Contractor's expense. Test results from a commercial laboratory must be sealed by a licensed professional engineer.

SCC used for prestressed beams must have a Modulus of Elasticity of 5,000 ksi at 28 days. Test the concrete mix design before use in accordance with ASTM C469.

4.2.5. **Placing Concrete**. Place concrete only when its temperature at time of placement is between 50°F and 95°F.

Take responsibility for producing quality concrete under any weather condition and ensure adequate weather protection provisions are on-site and available for immediate use.

Provide immediate protective measures without compromising the quality of the product if rainfall occurs after concrete placing operations have started. Failure to immediately provide adequate weather protection may be cause for rejection of the affected product.

Maintain concrete transporting equipment clean and free of hardened concrete.

At the time of concrete placement, reinforcing steel, strands, and embedments must be free of dirt, oil, or other bond-breaking substances.

Place and adequately consolidate concrete while all lifts are in a plastic state. Concrete must not exhibit segregation or excessive bleeding. Minimize concrete flow lines and displacement of the reinforcing steel, strands, embedments, and ducts during concrete placement. Place concrete as near as possible to its final position in the forms, except when using SCC. Do not deposit large quantities of concrete at one location and run or work it along the forms to other locations, except for SCC. Place SCC in a manner to avoid segregation.

Do not allow fresh concrete to free-fall more than 8 ft. unless approved.

Work the coarse aggregate back from the face of the concrete and force the concrete under and around the reinforcing steel, strands, embedments, and ducts. If prestressed concrete I-beams are cast in multiple lifts, the thickness of the first lift must be slightly above the juncture of the bottom flange and web.

Unless otherwise approved by the Engineer, cast prestressed concrete voided box beams monolithically in two stages, maintaining the concrete in the previously placed bottom slab in a plastic state until the web (side wall) concrete is placed and vibrated into the bottom slab.

The maximum time between the addition of mixing water or cement to the concrete batch and the placing of concrete in the forms is 30 min. for concrete delivered in non-agitated delivery equipment and 60 min. for concrete delivered in agitated delivery equipment. If conditions of wind, humidity, and temperature cause quick stiffening of the concrete, the required placement times may be reduced and an approved retarder may be required, or increased if currently in use. Submit a plan for approval, if necessary, to demonstrate the concrete can be properly placed, consolidated, and finished without reducing placement time limits.

The maximum acceptable placement slump will be in accordance with Item 421, unless otherwise specified. When the maximum acceptable placement slump or slump flow is exceeded, the affected concrete will be rejected, and retesting for slump or slump flow will not be allowed, regardless of the concrete placement times.

Additional requirements for precast mass placements will be in accordance with Item 420, “Concrete Substructures.” In the case of a conflict between the two Items, the more stringent requirements apply.

4.2.5.1. **Placing Concrete in Cold Weather**. Maintain concrete temperature between 50 and 95°F at time of placement in accordance with Section 424.4.2.5., “Placing Concrete,” and maintain the concrete temperature of precast members at or above 50°F during the specified curing period in accordance with Section 424.4.2.7., “Curing of Concrete.” Do not place concrete when the atmospheric temperature in the shade is below 40°F and falling, unless approved. Concrete may be placed when the atmospheric temperature in the shade is at least 35°F and rising or above 40°F, provided adequate cold-weather protection provisions are on-site and available for immediate use before placing concrete when weather conditions indicate a possible need for temperature protection. When required, provide necessary covering material or an approved accelerated curing system in accordance with Section 424.4.2.7.4., “Accelerated Curing,” and do not allow any concrete to remain unprotected for longer than 1 hr. after placement. Do not place concrete in contact with any material coated with frost or with material at a temperature of 32°F or lower. Do not apply heat directly to concrete surfaces if accelerated curing is used. Take protective measures to ensure the difference between air temperature and concrete surface temperature does not cause thermal cracking.

Maintain aggregates free of ice, frost, and frozen lumps. Heat the aggregate and the water when needed to produce the minimum concrete placement temperature of 50°F, but:

- do not allow the water temperature to exceed 180°F or the aggregate temperature to exceed 150°F,
- heat the aggregate uniformly to eliminate overheated areas in the stockpile that might cause flash set of the cement, and
- provide an aggregate and water mixture temperature between 50 and 85°F before introduction of the cement.

4.2.5.2. **Placing Concrete in Hot Weather**. Keep concrete at or below 95°F at time of placement in accordance with Section 424.4.2.5., “Placing Concrete.” Use any of the following methods, as needed, to control the concrete placement temperature.

- Cool the aggregate by sprinkling or fogging (fine mist) with water, shading, or using an approved liquid nitrogen system and procedure.
- Cool the fresh concrete by using chilled mixing water, partially replacing mixing water with shaved or crushed ice, or using an approved system and procedure to discharge liquid nitrogen into concrete during batching.

Apply a fog spray (fine mist) of water to the steel just before placing concrete when the temperature of steel forms, strand, or reinforcing steel is greater than 120°F. Water droplets left on the form surfaces must not adversely affect surface finishes.

When field conditions are such that evaporation of water from the concrete makes the surface finishing operation difficult, a fog spray (fine mist) of water may be applied above the concrete surface. Do not fog directly toward the concrete or in any manner that will wash cement paste from the fresh concrete surface or cause water to puddle. Do not use fog to add finishing water and do not work moisture from the fog spray

into the fresh concrete. An approved evaporation retardant conforming to DMS-4650, "Hydraulic Cement Concrete Curing Materials and Evaporation Retardants," is also acceptable if used in conformance with the manufacturer's recommendations. Do not apply the evaporation retardant when floating and troweling concrete. Do not allow it to puddle or be worked into the concrete surface immediately after application. Misuse of fog spray or evaporation retardant will be cause for disallowing its use. Shade the concrete during casting if necessary.

Use an approved retarder, in conformance with the manufacturer's recommendations, when the air temperature is above 85°F if necessary to control concrete slump loss and lengthen the time for placing, consolidating, and finishing operations.

4.2.5.3. **Consolidation of Concrete**. Consolidate concrete thoroughly using high-frequency vibration immediately after placement. For prestressed concrete beams and piling, internal vibration is required and may be supplemented with external vibration.

Provide at least one on-site standby vibrator of the type being used for emergency use.

Perform concrete vibration using trained personnel and proper timing and spacing to ensure adequate consolidation. Revise the concrete placement and consolidation procedures, and review the concrete mix design and batching procedures, if necessary, when unacceptable defects such as excessive honeycombing, aggregate or mortar pockets, or surface air voids (bugholes) are present. Provide supplemental vibrators or modify the vibration system when required to accomplish thorough consolidation of the concrete and complete embedment of the strands, reinforcing steel, embedments, or ducts. Avoid segregation or excessive bleeding of the concrete during vibration.

4.2.5.3.1. **Internal Vibration**. Insert vibrators into the concrete immediately after concrete placement at points spaced to ensure uniform vibration of the entire concrete mass. Limit the insertion spacing to within the radius where the vibrators are visibly effective. Allow the vibrators to sink into the concrete by their own weight and penetrate previously placed lifts that are still in a plastic state to thoroughly consolidate the layers together and prevent cold joints. Withdraw the vibrators slowly to avoid forming holes after the concrete is thoroughly consolidated.

Do not allow prolonged contact of vibrators with forms so vibrator marks on concrete surfaces are minimal. Do not use vibrators to move concrete to other locations in the forms.

Use vibrators with nonmetallic vibrating heads to prevent damage to the epoxy coating when epoxy coated reinforcing steel is used. Increase the consolidation time and decrease the insertion spacing, if necessary, when using these vibrators.

4.2.5.3.2. **External Vibration**.

4.2.5.3.2.1. **Form Vibrators**. Form vibrators may be used to consolidate thin members, supplement internal vibration, or consolidate members with highly congested reinforcing steel.

Determine the size, number, and location of external vibrators to provide enough intensity of vibration to the desired area of the form. Adjust the spacing, frequency, amplitude, and duration of vibration according to the concrete mix and size of member to produce uniform consolidation of the concrete.

4.2.5.3.2.2. **Surface Vibrators**. Use vibratory screeds to consolidate thin sections. Move vibratory screeds at a rate that will bring enough mortar to the surface to embed and cover the coarse aggregate. Do not over-vibrate by causing an excessive amount of mortar to be brought to the surface.

4.2.5.3.2.3. **Vibrating Tables**. Determine the size, number, and location of external vibrators to provide enough intensity of vibration to the desired area of the form. Adjust the spacing, frequency, amplitude, and duration of vibration according to the concrete mix and size of member to produce uniform consolidation of the concrete.

4.2.5.3.3. **Vibration of Self-Consolidating Concrete (SCC)**. Vibrate SCC only when approved. Provide an adequate amount of viscosity modifying admixture (VMA) in SCC mix when internal vibration is allowed.

4.2.6. **Finishing of Concrete**. Finished, unformed surfaces must not have distortions greater than 1/4 in. Screed or rough-float unformed surfaces of members, bringing enough mortar to the surface to embed and cover the coarse aggregate. Provide a uniform rough wood float finish to the surface of the member unless otherwise shown on the plans. Do not loosen aggregate when roughening the surface using a broom or when providing a tine finish.

Provide a smooth metal trowel finish for surfaces at anchor bolt locations.

4.2.7. **Curing of Concrete**. Cure concrete to promote early cement hydration by providing adequate moisture on exposed surfaces and by maintaining the concrete temperature or curing enclosure air temperature at the concrete surface within the limits specified in this Section. Provide uniform temperature and moisture on the surfaces to prevent differential shrinkage that may cause warping or cracking. Prevent temperature differentials within the concrete that cause thermal cracking.

Begin curing after the finishing operation, before the formation of plastic shrinkage cracks, and as soon as damage to the surface finish will not occur. Provide fog spray or an evaporation retardant after finishing and before curing if needed to prevent plastic shrinkage cracks. Apply fog spray or evaporation retardant in accordance with Section 424.4.2.5.2., "Placing Concrete in Hot Weather." Keep exposed concrete surfaces continuously wet for the duration of the specified curing period, unless an approved liquid membrane-forming curing compound is used. Membrane curing compound is permitted only in accordance with this Section or in conformance with the pertinent Item.

Approved equipment and materials for curing must be on-site and available for immediate use before placing concrete. Provide temperature probes to monitor the concrete temperature or curing enclosure air temperature as specified in Table 2.

Table 2
Temperature Probe Requirements

Condition	Major Prestressed Members	Minor Prestressed Members	Nonstressed Members
Forecasted atmospheric temperature ≥50°F during specified curing period	2 concrete temperature probes per casting line to monitor high concrete temperature regions[5]	2 concrete temperature probes per casting line to monitor high concrete temperature regions[1,5]	N/A
Forecasted atmospheric temperature <50°F during specified curing period	2 concrete temperature probes per casting line to monitor high concrete temperature regions,[5] and 2 concrete temperature probes per casting line to monitor low concrete temperature regions[2,5]	2 concrete temperature probes per casting line to monitor high concrete temperature regions,[1,5] and 2 concrete temperature probes per casting line to monitor low concrete temperature regions[2,5]	1 concrete temperature probe per 100 cu. yd. of concrete or fraction thereof to monitor low concrete temperature regions[2]
Forecasted atmospheric temperature <40°F during additional 3-day curing period[3]	N/A	1 concrete temperature probe per similar curing condition for prestressed piling only	N/A
When accelerated curing is used	2 temperature probes per casting line to monitor curing enclosure air temperature at concrete surfaces[4,5]	2 temperature probes per casting line to monitor curing enclosure air temperature at concrete surfaces[4,5]	1 temperature probe per 100 cu. yd. of concrete or fraction thereof to monitor curing enclosure air temperature at concrete surfaces

1. Excluding prestressed bridge deck panels and prestressed retaining wall panels.
2. When accelerated curing is used, concrete temperature probes to monitor low concrete temperature regions are not required.
3. After attaining specified release-of-tension strength.
4. These probes are in addition to the concrete temperature probes required for monitoring high concrete temperature regions.
5. Place probes at the beginning and end of casting line.

Attach each temperature probe to a separate temperature recording device unless multi-channel temperature recording devices are used, in which case one high concrete temperature probe and one low concrete temperature probe may be attached to the same recording device. When accelerated curing is used, one curing enclosure air temperature probe may also be attached to this multi-channel temperature recording device.

Inadequate curing facilities or lack of attention to the proper curing of concrete will be cause for the Engineer to stop concrete placement until approved curing is provided. Inadequate curing may be cause for rejection of the affected product.

Forms may be removed at the discretion of the Contractor at any time after the concrete has reached sufficient strength to prevent physical damage to the member. Do not interrupt curing for more than 60 min. during form removal.

The following curing requirements apply for prestressed members.

- Cure concrete continuously, except as allowed during form removal, until the compressive strength of the concrete has reached the specified release-of-tension strength and until detensioning has been performed.
- Maintain concrete temperatures between 50 and 150°F during the curing period. The maximum allowable concrete temperature may be increased to 170°F if the Contractor uses one of the concrete mix design options listed in Section 421.4.2.6., “Mix Design Options,” other than Options 6, 7, and 8. The Engineer may require lowering of the total cementitious content in the concrete mix design to the limits specified in Item 421 for repeated violations of the maximum curing temperature.
- Membrane curing is permitted only for unformed surfaces of prestressed wall panels and interim curing on unformed surfaces of prestressed piling. Use Type 1-D or Type 2 curing compound in accordance with DMS-4650 for this application.
- Water cure prestressed piling an additional 3 days after attaining the specified release-of-tension strength. Do not interrupt curing for more than 4 hr. when moving piling to the storage area. Maintain the concrete temperature of piling at 50°F or above during this additional curing period.

The following curing requirements apply for nonstressed members.

- Cure concrete continuously, except as allowed during form removal, for 4 days or until the compressive strength of the concrete has reached the design strength.
- Maintain concrete temperatures between 50°F and 150°F during the curing period. The maximum allowable concrete temperature may be increased to 170°F if the Contractor uses one of the concrete mix design options listed in Section 421.4.2.6., “Mix Design Options,” other than Options 6, 7, and 8.
- Membrane curing is permitted on nonstressed members, except for surfaces to be painted or color stained.

Cure members for an additional 24 hr. beginning immediately after the normal curing period if they are out of cure at any time other than during the allowable 60 min. for form removal or during the allowable 4 hr. for moving piling to storage.

Members failing to meet the concrete temperature requirements or curing enclosure air temperature requirements during curing will be reviewed. Repeated failure to maintain proper concrete temperatures may be cause for rejection of the affected product.

4.2.7.1. **Water Curing**. Water curing provides additional moisture to concrete and prevents moisture loss. Water used for curing must meet the requirements for concrete mixing and curing water specified in Section 421.2.5., “Water.” Do not use seawater or water that stains or leaves an unsightly residue that cannot be removed. Monitor and maintain a temperature differential between curing water and concrete surface temperature that prevents thermal cracking.

4.2.7.1.1. **Wet Mat Method**. Use water-saturated cotton mats, burlap-polyethylene sheeting, or other approved moisture-retaining materials. Anchor the wet mats adequately to provide continuous contact with exposed concrete surfaces.

4.2.7.1.2. **Water Spray Method**. Use overlapping sprays, sprinklers, or soil-soaker hoses so concrete surfaces are kept continuously wet.

4.2.7.1.3. **Ponding Method**. Continuously cover exposed concrete surfaces with standing water.

4.2.7.2. **Moisture Retention Curing**. Moisture retention curing prevents moisture loss from the concrete.

4.2.7.2.1. **Form Curing Method**. Concrete surfaces in direct contact with forms that are left in place will not require additional curing methods unless cold-weather protection is necessary.

4.2.7.2.2. **Impermeable Cover Method**. Cover exposed concrete surfaces with polyethylene sheeting, burlap-polyethylene sheeting, impervious paper, or other approved impermeable materials placed in close contact with concrete surfaces to keep them continuously wet. Provide additional moisture inside the enclosure in accordance with Section 424.4.2.7.1., "Water Curing," if this is not enough to keep exposed concrete surfaces continuously wet.

4.2.7.3. **Membrane Curing**. Liquid membrane-forming curing compound is a moisture retention covering that is applied as a liquid. It is permitted only as specified in Section 424.4.2.7., "Curing of Concrete."

Use Type 1-D or Type 2 membrane curing compound in accordance with DMS-4650. Apply membrane curing compound using equipment and in a manner specified in Section 420.3.5., "Spraying Equipment," and Section 420.4.10.3., "Membrane Curing," respectively.

Do not contaminate reinforcing steel, embedments, or concrete surfaces that will later be in direct contact with cast-in-place concrete unless the curing compound can be completely removed to the satisfaction of the Engineer when applying membrane curing compound.

Use membrane curing compounds that do not appreciably stain the concrete.

4.2.7.4. **Accelerated Curing**. Accelerated curing is defined as curing using artificial heat provided to the curing enclosure or forms.

Test accelerated curing facilities for at least 48 hr. to demonstrate temperature variations do not exceed 20°F between any points in the curing enclosure. Submit accelerated curing facility drawings and test results, and obtain approval before using these facilities for Department work. The test may be performed on the entire casting line with either freshly cast concrete inside the forms or with empty forms. Provide one curing enclosure air temperature probe per 100 ft. of casting line when accelerated curing facilities are being tested.

Maintain the air temperature in the curing enclosure between 50°F and 85°F until initial set of the concrete (as determined in accordance with Tex-440-A when establishing mix designs under representative temperature conditions) and for at least 3 hr. after concrete placement. The concrete temperature may then be raised uniformly at a maximum rate of 36°F per hour. Provide an unobstructed air space of at least 6 in. between surfaces of the concrete and the curing jacket.

Monitor and maintain the curing enclosure air temperature between 50°F and 160°F during accelerated curing for prestressed and nonstressed concrete members. Do not allow the air temperature to exceed 160°F for more than 1 cumulative hr. during the entire curing period. Do not allow the air temperature to exceed 170°F at any time during the specified curing period. Arrange the location of the heat discharge into the curing enclosure so temperature variations do not exceed 20°F between any points in the curing enclosure.

Provide curing enclosure air temperature probes to monitor the temperature at the concrete surface as specified in Table 2.

Provide enough moisture inside the curing enclosure to keep exposed concrete surfaces continuously wet for the specified curing period.

Provide other acceptable curing methods for the remaining curing period if accelerated curing is terminated before the specified curing period has elapsed.

4.2.7.4.1. **Steam Curing**. Steam cure in conformance with the requirements of accelerated curing. Position steam outlets so live steam is not applied directly on the concrete, forms, or test cylinders.

4.2.7.4.2. **Alternate Methods**. Other methods of accelerated curing, such as the use of radiant heaters or portable heater, may be permitted if they meet the requirements of accelerated curing. The use of any alternate method requires written approval.

4.2.8. **Detensioning**. Release the tension in the strands after concrete strength requirements are met using a sequence to minimize premature wire breakage or shock and damage to the concrete members. Release strands by multiple-strand detensioning or single-strand flame detensioning. Ensure strands are not released individually with single-strand jacks.

Flame-release each strand simultaneously at both ends of the casting bed, using a symmetrical sequence prepared by a licensed professional engineer, if strands are released individually. Heat the strands over an approved strand length and duration when flame detensioning so that the metal slowly elongates and gradually loses strength. Do not abruptly flame-cut strand by holding the heat source in a concentrated location on the strand. Submit the flame-release procedures and sequences for approval. Approval of flame-release sequences does not relieve the Contractor from responsibility for meeting the product workmanship requirements of Section 424.4.3., “Workmanship.”

Release the tension in the strand hold-down anchor slowly to minimize shock and damage to the concrete member when draped strands are used. Heat the anchor until the metal slowly elongates and gradually loses strength if heat is used to release the hold-down anchor. Provide positive external hold-downs to offset the vertical forces in the members when the sum of the hold-down forces is greater than half the weight of the member or for any amount of vertical force that has previously caused cracking. External hold-downs are to remain on each member until detensioning has been completed.

4.3. **Workmanship**. Formed surfaces must not have excessive surface honeycombing, aggregate or mortar pockets, air voids, lift lines, stains, or vibrator marks. Remove form-joint-offset marks exceeding the tolerances specified in Section 424.4.2.1.1., “External Forms,” and fins and rough edges along chamfer lines, in a manner that will not damage the member. Repair fabrication holes, except box beam and U-beam drain holes, using an approved repair material and procedure.

Recess strands in accordance with the *Concrete Repair Manual* unless otherwise shown on the plans. Submit for approval any other moisture-barrier systems for protecting strands.

Before shipment of members, remove:

- concrete, paste, dirt, oil, or other bond-breaking substances from exposed reinforcing steel, and
- laitance, dirt, oil, or other bond-breaking substances from concrete surfaces to be in contact with cast-in-place concrete.

4.3.1. **Defects and Breakage**. Members that sustain damage or surface defects during fabrication, handling, storage, hauling, or erection are subject to review. Evaluate and repair members in accordance with the *Concrete Repair Manual*. Submit proposed deficiencies in accordance with the Department’s NCR guidelines and obtain approval before performing repairs. Repair work must reestablish the member’s structural integrity, durability, and aesthetics to the satisfaction of the Engineer.

When deficiencies occur, determine the cause and take immediate corrective action. Failure to take corrective action, leading to similar repetitive deficiencies, could be cause for rejection of members.

Cracks that extend to the nearest reinforcement plane and fine surface cracks that do not extend to the nearest reinforcement plane, but are numerous or extensive, are subject to review.

Cracks in prestressed members that tend to close upon transfer of stress to the concrete are acceptable. Cracks that do not tend to close are subject to review.

Seal cracks in I-beam ends exceeding 0.005 in. in width as directed. The fabricator must decrease the spacing of Bars R and S in I-beam by providing additional bars to help limit crack width. No less than 1-in. clearance between bars will be permitted. The fabricator must take approved corrective actions if cracks greater than 0.005 in. form. All work, material, and engineering related to these cracks will be at the Contractor's expense.

Prestressed bridge deck panels will be rejected for any of the following conditions:

- any crack extending to the reinforcing plane and running parallel and within 1 in. of a strand for at least 1/3 of the embedded strand length; or
- any transverse or diagonal crack, including corner cracks and breaks, intersecting at least two adjacent strands and extending to the reinforcing plane.

Prestressed bridge deck panels that sustain damage, cracks not listed above, or surface defects during fabrication, handling, storage, hauling, or erection are subject to review.

4.3.2. **Tolerances**.

4.3.2.1. **Prestressed Members**. Allowable tolerances for the dimensions and configurations shown on the plans or approved shop drawings are shown in Table 3.

Variations greater than those specified in Table 3 are subject to review. However, these tolerances do not relieve the Contractor from the responsibility of furnishing a completed structure that is in reasonably close conformity with the lines, grades, cross-sections, dimensions, and details specified. Correct members not meeting these tolerances at no additional expense to the Department, to achieve a satisfactory completed structure. This also includes costs for correction due to variations in vertical beam camber. Correction may require replacement of the member.

Horizontal misalignment (sweep) in beams, which may increase later and exceed the tolerance shown in Table 3, may be acceptable if the members can be hauled, erected, and aligned to within the allowable tolerance without being damaged. Store these members in a manner that will minimize the sweep.

Embedments must be firmly held in proper position to avoid movement during concrete placement. Place embedments in conformance with the manufacturer's recommendations. Place weld clip inserts for permanent metal deck forming no more than 1/16 in. from the beam edge.

Table 3
Allowable Tolerances for Prestressed Members

Dimension	I-beams	U-beams	Box Beams	Double-T Beams	Bridge Deck Panels	Piling	Wall Panels[1]
Length (perpendicular to strands for bridge deck panels)	±1"	±1"	±1"	±3/4"	±1/2"	−1"[2]	±3/16"
Width (parallel to strands for bridge deck panels)	+3/4" −1/4"	±1/4"	±1/4"	±1/2"	±1/2"	±1/4"	±3/16"
Nominal depth (thickness in case of panels)	+1/2" −1/4"	±1/4"	±1/4"	±1/4"	+1/4" −1/8"	±1/4"	±3/16"
Thickness: top slab or flange	+1/2" −1/4"	±1/2"	±1/2"	±1/4"	N/A	N/A	N/A
Thickness: bottom slab or flange	+1/2" −1/4"	±1/2"	±1/2"	N/A	N/A	N/A	N/A
Thickness: web or wall	+3/4" −1/4"	±1/2"	±1/2"	±1/4"	N/A	N/A	N/A
Horizontal alignment (deviation from straightness of all panel edges)	±1/8" per 10' of length	±1/8" per 10' of length, 3/4" Max	±1/4"	±1/4"	±1/8"	±1/8" per 10' of length	±1/8" per 10' of length, 1/2" Max
Deviation of ends (horizontal skew)	±1/2"	±1/2"	±1/2"	±1/2"	±1/2"	±1/8"	±1/4" per 5' of width, 1/2" Max
Deviation of ends (vertical batter)	±1/2"[8]	±1/2"[8]	±1/2"	±1/2"	N/A	±1/8"	±1/4"
Notched end areas (for diaphragms): depth	±1/4"	N/A	±1/4"	±1/4"	N/A	N/A	N/A
Notched end areas (for diaphragms): length	+2" −1"	N/A	+2" −1"	+2" −1"	N/A	N/A	N/A
Bearing surfaces: perpendicular to vertical axis	±1/8"	N/A	N/A	±1/16"	N/A	N/A	N/A
Bearing surfaces: deviation from plane	±1/16"	±1/8"	±1/8"	±1/16"	N/A	N/A	±1/16[3]
Anchor hole location: from end of member	+3/4" −1/4"	±1/4"	±1/4"	+3/4" −1/4"	N/A	N/A	N/A
Anchor hole location: longitudinal spacing	±3/4"	±1/2"	±1/2"	±3/4"	N/A	N/A	N/A
Anchor hole location: transverse location	±1/4"	±1/4"	±1/4"	±1/4"	N/A	N/A	N/A
Diaphragm or lateral tie location	±1/2"	N/A	±1/2"	±1/2"	N/A	N/A	N/A
Position of internal void form (longitudinal for box beams and U-beams)	N/A	±1"	±1"[4,5]	N/A	N/A	±1/2"	N/A
Projection of reinforcing steel outside member	+1/2" −3/4"	+1/2" −3/4"	+1/2" −3/4"	+1/2" −3/4"	+1/2" −3/4"	N/A	+1/2" −3/4"
Position of strands: vertical	±1/4"[6]	±1/4"	±1/4"	±1/4"	±1/8"[7]	±1/4"	±1/8"
Position of strands: horizontal	±1/4"	±1/4"	±1/4"	±1/4"	±1/2"	±1/4"	±1/2"
Debonded length of strands	±3"	±3"	±3"	±3"	N/A	N/A	N/A
Position of strand hold-down points	±6"	±6"	N/A	±6"	N/A	N/A	N/A
Position of handling devices: parallel to length	±6"	±6"	±6"	±6"	As shown on the plans	±6"	±6"
Position of handling devices: transverse to length	±1"	±1"	±1"	±1"	As shown on the plans	±1"	±1"
Local flatness of formed surfaces (excluding bearing surface)	±1/4" in 10'	±1/4" in 10'	±1/4" in 10'	±1/4" in 10'	±1/4"	±1/4" in 10'	±1/4" in 10'
Bow (length and width)	N/A	N/A	N/A	N/A	N/A	N/A	±1/4" per 10'

1. Prestressed and nonstressed wall panels (e.g., tie back, C-wall, and sound wall) except MSE wall panels.
2. Maximum length as approved.
3. Measured along the panel depth at the top and bottom panel sides.
4. Voided box beams only.
5. Length of box beam internal void form +1 in., −6 in.
6. For draped strands, the tolerance for vertical position of strands at the end of the beam may be increased to ±1/2 in. provided the tested concrete compressive strength, before release of tension into the member, is at least 5% greater than the release-of-tension strength shown on the plans.
7. Measured from bottom of panel.
8. 3/4 in. maximum for beams exceeding a height of 54 in.

4.3.2.2. **Nonstressed Members**. The allowable tolerances for nonstressed members are as specified in Table 4, unless otherwise shown on the plans. The allowable tolerances for nonstressed wall panels, except MSE wall panels, are as specified in Table 3.

Table 4
Allowable Tolerances for Nonstressed Members

Member	Dimension	Tolerance
MSE wall panels and wall components[1] (e.g., coping and posts)	All dimensions (including deviation from edge straightness)	±3/16 in.
	Deviation of ends (horizontal skew)	±1/4 in. in 5 ft., ±1/2 in. Max
	Local flatness of formed surfaces	±1/8 in. in 5 ft.
	Connection hardware	±1/2 in.

1. Includes wall components for tie-back walls, C-walls, sound walls, etc.

4.4. **Storage and Handling**. Mark members for identification immediately after form removal as shown on approved shop drawings, in conformance with the pertinent Items, or as required. Do not change any identification markings or transfer material to other projects without approval. Inspect members immediately before shipping to the jobsite for damage that may have occurred in storage. Store and handle prestressed and nonstressed members in accordance with Item 425.

5. MEASUREMENT AND PAYMENT

The work performed, materials furnished, equipment, labor, tools, and incidentals will not be measured or paid for directly, but will be subsidiary to bid items of the Contract.

Item 425
Precast Prestressed Concrete Structural Members

1. DESCRIPTION

Furnish and erect precast prestressed concrete members fabricated by pre-tensioning, post-tensioning, or a combination of the two.

2. MATERIALS

Use materials that meet the requirements of the following.

- Item 420, "Concrete Substructures"
- Item 421, "Hydraulic Cement Concrete"
- Item 426, "Post-Tensioning"
- Item 427, "Surface Finishes for Concrete"
- Item 434, "Bridge Bearings"
- Item 440, "Reinforcement for Concrete"
- Item 442, "Metal for Structures"
- Item 445, "Galvanizing"
- Item 448, "Structural Field Welding"
- DMS-4650, "Hydraulic Cement Concrete Curing Materials and Evaporation Retardants"
- DMS-7300, "Precast Concrete Fabrication Plants."

2.1. **Prestressing Hardware**. Furnish prestressing hardware in conformance with the manufacturer's specifications.

2.2. **Concrete**. Furnish concrete of the class shown on the plans.

2.3. **Prestressing Steel**. Furnish prestressing steel conforming to one of the following types:

- seven-wire steel strand meeting DMS-4500, "Steel Strand, Uncoated Seven-Wire Low-Relaxation for Prestressed Concrete,"
- alloy bars meeting ASTM A722, or
- steel wire meeting ASTM A421.

Use seven-wire steel strand produced by a prequalified manufacturer on the Department's MPL. The Department may take samples in accordance with Tex-710-I to verify compliance with specification requirements.

Assign an individual lot number to all bars from each size and heat, all wire from each coil, and all strand from each reel, and tag the material for accurate identification at the jobsite. Identify each lot of anchorage assemblies and couplers in a similar manner. Unidentified prestressing steel, anchorage assemblies, or couplers received at the project site will be rejected. Loss of positive identification of these items at any time will be cause for rejection.

2.4. **Post-Tensioning System**. Furnish post-tensioning system as required by Item 426 and as shown on the plans.

3. CONSTRUCTION

Fabricate precast prestressed concrete members in accordance with Item 424, "Precast Concrete Structural Members (Fabrication)." Fabricate railroad structures in accordance with the AREMA *Manual for Railway Engineering* and Item 424. In the case of a conflict between the AREMA manual and Item 424, the more stringent requirements apply.

3.1. **Handling, Storing, Hauling, and Erection of Precast Prestressed Concrete Members**. Properly handle, store, haul, and erect all members so that they are placed in the structure in a manner to avoid excessive bending stresses and without damage. Lift members with approved lifting devices as shown on the shop drawings or as approved.

Maintain beams in an upright position at all times, and raise and support them near the ends to prevent torsion unless approved on shop or erection drawings.

Do not move members from the casting yard until all requirements of the pertinent Items have been met. Haul beams to the project site after at least 7 days have elapsed since casting, unless otherwise approved.

The storage area must be clean and well drained. Prevent excessive or differential settlement of members by storing on:

- stable ground and
- dunnage of sufficient size, shape, and strength to prevent crushing.

Place dunnage a distance no more than 3% of the beam length from the beam ends. When approved, cantilever beams may be supported at locations other than near the ends. Support concrete box beams and U-beams under the solid end block area during handling, storage, hauling, and erection.

Separate members with blocking arranged in vertical planes that will not crush under load when members are stacked. Stack members so lifting devices are accessible and undamaged. Use dunnage or blocking material that will not damage or stain the required finish.

Rearrange improperly stored members and inspect them for damage. Members that are improperly stored and become cracked, warped, or otherwise damaged in storage may be rejected.

Securely tie or brace all beams during erection in conformance with minimum erection and bracing standards. Protect traffic against falling objects during the erection of diaphragms and other structural members, during the placing of cast-in-place concrete, and during the erection and dismantling of forms when railroad or roadway traffic must be maintained beneath beams already placed. Protect traffic with nets or flooring with openings not larger than 1 in. or as approved.

Fit mating surfaces to prevent excessive grout leakage when erecting precast prestressed concrete bridge deck panels. Fill the joint with grout or seal it with an acceptable caulking compound before placing the cast-in-place portion of the slab if such fit is not provided.

Finish surfaces of beams or other members after slab placement in accordance with Section 420.4.13., "Ordinary Surface Finish," and Item 427.

Correct beam discrepancies including, but not limited to horizontal misalignment or variations in vertical camber, to achieve a satisfactory completed structure at no additional expense to the Department. Correction may require replacement of the member.

3.2. **Packaging, Storing, and Handling of Prestressing Steel**. Protect prestressing steel against physical damage and rust or other results of corrosion, from manufacture to grouting or encasing in concrete. Prestressing steel with physical damage will be rejected. Replace any reel containing broken wires. Provide wire that is bright and uniformly colored, without foreign matter or pitting on the surface.

Package prestressing steel in containers or shipping forms for protection from physical damage and corrosion during shipping and storage. A corrosion inhibitor must be:

- placed in the package or form,
- incorporated in a corrosion inhibitor carrier type packaging material, or
- applied directly to the steel when permitted.

The corrosion inhibitor must not have deleterious effect on the steel, concrete, or bond strength of steel to concrete. Inhibitor carrier-type packaging material must conform to the provisions of federal specification MIL-PRF-3420 G. Immediately replace damaged packaging or forms, or restore them to original condition.

Have the shipping package or form clearly marked with the corrosion inhibitor type, packaging date, and a statement that the package contains high-strength prestressing steel.

Handle prestressing steel carefully to avoid abrading, nicking, or kinking the strand, bar, or wire. Protect prestressing steel from damage and corrosion by storing it above the ground on platforms, skids, or other approved supports. Any pitting or tightly adhering rust on prestressing steel will be cause for rejection of the steel. Do not weld or torch-cut near any prestressing steel, so that it is not exposed to weld spatter, direct heat, or short-circuited current flow.

When prestressing steel for post-tensioning is installed in the ducts, any rust that forms during the first 14 days after installation will not be cause for rejection of the steel.

4. MEASUREMENT

This Item will be measured by the foot, square foot, square yard, cubic yard, or each member. This is a plans quantity measurement Item. The quantity to be paid is the quantity shown in the proposal, unless modified by Article 9.2., “Plans Quantity Measurement.” Additional measurements or calculations will be made if adjustments of quantities are required.

5. PAYMENT

The work performed and materials furnished in accordance with this Item and measured as provided under “Measurement” will be paid for at the unit price bid for “Prestressed Concrete” of the specified structural component and type or size. This price is full compensation for fabricating, hauling, and erection of the members; furnishing and tensioning of prestressing steel; furnishing and placing reinforcing steel and duct; furnishing and placing bearing plates, elastomeric bearings, bars, anchorage plates, and appurtenances; grouting holes; repairs; special treatment of end anchorages and shoes as required; erection bracing; and equipment, labor, tools, and incidentals.

Precast prestressed concrete bridge deck panels will not be paid for directly, but will be subsidiary to pertinent Items.

Precast prestressed concrete piling will be paid for in accordance with Item 409, “Prestressed Concrete Piling.”

No additional compensation will be made for alternate designs or for any increase in quantities required to accommodate alternate designs, including quantities paid for under other Items.

Item 427
Surface Finishes for Concrete

1. DESCRIPTION

Finish concrete surface as specified.

2. MATERIALS

Furnish materials in accordance with this Article for the type of surface finish specified.

2.1. **Coatings**.

2.1.1. **Adhesive Grout and Concrete Paint**. Provide coatings in accordance with DMS-8110, "Coatings for Concrete." Match color of coating with Federal Standard 595C color 35630, concrete gray, unless otherwise shown on the plans.

2.1.2. **Opaque Sealer**. Provide penetrating-type sealer in accordance with DMS-8110. Match color of coating with Federal Standard 595C color 35630, concrete gray, unless otherwise shown on the plans.

2.1.3. **Silicone-Based Paint**. Provide silicone resin emulsion paint (SREP) meeting the requirements of DMS-8141, "Paint, Silicon Resin for Concrete." Match color of coating with Federal Standard 595C color 35630, concrete gray, unless otherwise shown on the plans.

2.1.4. **Epoxy Waterproofing**. Provide Type X epoxy in accordance with DMS-6100, "Epoxies and Adhesives," or another approved waterproofing epoxy designed to limit the moisture vapor transmission into a concrete or steel surface. Match color of coating with Federal Standard 595C color 35630, concrete gray, unless otherwise shown on the plans.

2.2. **Exposed Aggregate Finish**. Provide approved aggregates meeting the grading requirements shown on the plans. Provide gravel consisting of predominantly rounded particles unless otherwise shown on the plans. Use crushed stone when a bush-hammered finish is desired. Provide a concrete surface retardant. Provide clear Type II permanent anti-graffiti coating in accordance with DMS-8111, "Anti-Graffiti Coatings."

3. EQUIPMENT

The Engineer may require demonstration of the equipment's capabilities.

3.1. **Water Blasting**. Use equipment capable of supplying a minimum pressure at the nozzle end of 3,000 psi.

3.2. **Abrasive Blasting**. Use equipment with filters to produce oil-free air and water-free air when dry air is required.

3.3. **Slurry Blasting**. Use equipment capable of combining air and abrasives with water to form wet blast media capable of cleaning and preparing surface without creating dust.

3.4. **Spraying**. Use equipment with fluid and air pressure regulators and gauges to allow for adjustment to produce a uniform spray pattern for coating applications.

3.5. **Off-the-Form Finish Forms**. Use nonstaining, nonporous, high-quality forming materials (e.g., steel or medium-density and high-density overlaid plywood forms). Use steel or high-density overlaid plywood forms when the same form will be used more than twice.

3.6. **Form Liners**. Provide form liners capable of producing a patterned finish as shown on the plans. Use form liners that provide a clean release from the concrete surface without pulling or breaking the textured concrete.

4. CONSTRUCTION

Provide the finish shown on the plans for the specific surface areas.

4.1. **Surface Areas of Finish**. "Surface area of finish" designates the areas where the specified surface is to be applied.

4.1.1. **Surface Area I**. Surface Area I includes the following:

- surfaces of railing;
- exterior vertical faces of fascia beams, slabs, slab spans, arches, and box girders;
- the outside bottom surface of fascia beams and girders;
- the underside of overhanging slabs to the point of juncture of the supporting beam;
- the entire underside of slab spans when shown on the plans;
- vertical and underside surfaces of bents and piers;
- all surfaces of tie beams, abutments, bridge wingwalls, culvert headwalls and wingwalls, and retaining walls exposed to view after all backfill and embankment are placed; and
- all other exposed surfaces shown on the plans to require surface treatment.

4.1.2. **Surface Area II**. Surface Area II includes surfaces of railing, all wingwalls, and the exterior vertical faces of slabs.

4.1.3. **Surface Area III**. Surface Area III includes only the top and roadway faces of all concrete railing and bridge wingwalls.

4.1.4. **Surface Area IV**. Surface Area IV includes areas shown on the plans.

4.2. **Coatings**. Apply the coating specified on the plans.

4.2.1. **Preparation**. Clean the surface thoroughly before applying a coating by chemical cleaning, if required, and by blast cleaning.

Provide containment that keeps public property, private property, and the environment from being adversely affected by the cleaning and painting operations. Do not discharge washwater into any body of water or conveyance without TCEQ approval. Collect and properly dispose of any paint or debris dislodged by cleaning operations.

4.2.1.1. **Chemical Cleaning**. Clean surfaces contaminated with oil, grease, or other contaminants by scrubbing the area with an approved detergent or other concrete cleaning material before blast cleaning. Do not use a solvent that will stain the surface or inhibit coating adhesion. Perform the following test to check for surface contamination of oil type materials.

- Spray the surface with a fine mist of potable water.
- Examine the area to see if water beads up.
- Clean the surface if beading is found.

4.2.1.2. **Blast Cleaning**. Blast clean the designated surface to remove all surface material (including existing coatings), curing compound, and other contaminants before applying a specified coating, leaving a lightly etched uniformly textured surface. Use an approved abrasive propelled by oil-free air with or without the addition of potable water, or blast with potable water with or without the addition of an approved abrasive at sufficient pressure to effectively clean and prepare the surface. Maintain the stand-off distance of the nozzle to at most 12 in. from the surface being cleaned when water blasting.

Do not damage concrete surface by gouging, spalling, or exposing coarse aggregate by the blasting operation.

Blow clean oil- and moisture-free air on all surfaces with sufficient pressure to remove loose particles immediately before application of any coating. Perform the following test to check for surface cleanliness as directed.

- Press a 10-in. long strip of 2-in. wide clear packing tape on the surface by rubbing with moderate pressure.
- Grasp the free end of the tape and remove the tape from the surface with a sharp jerk.
- Examine the surface of the tape for clinging particles.

Continue cleaning the concrete surface until there are no particles clinging to the tape surface for subsequent tests. An additional test that can be used to check the surface for dust is to wipe the surface with a dark cloth and then examine the cloth for discoloration.

4.2.2. **Coating Application**. Mix coating materials in conformance with the manufacturer's instructions and thoroughly enough with a mechanical mixer at a speed that causes the mixture to rotate entirely in the container. Ensure complete mixing by probing the container using a stirring device searching for non-dispersed or settled material.

Apply coatings once the new concrete has aged at least 28 days, except for the adhesive grout coating. Do not apply coatings when weather conditions will be detrimental to the final surface finish as determined by the Engineer. Do not apply coatings when surface temperature of the concrete exceeds 110°F.

Apply coatings on a dry surface. Do not thin material unless approved. Apply when ambient temperature is between 50°F and 100°F. Apply coatings to obtain a consistent color, texture, and appearance. Apply concrete paint in two coats for a total maximum application rate of 150 sq. ft. per gallon. Apply opaque sealer in two coats for a total maximum application rate of 200 sq. ft. per gallon. Apply silicone resin paint in two coats at a rate not exceeding 300 sq. ft. per gallon per coat. Wait at least 12 hr. between coats for silicone resin paint. Apply epoxy waterproofing at a maximum application rate of 100 sq. ft. per gallon. For epoxy waterproofing, apply a thin uniform film of mixed epoxy to the substrate using a short nap roller or brush. The epoxy may be sprayed in conformance with the thinning requirements of the manufacturer. No more than 15% reduction is permitted.

Repair coatings that exhibit peeling, flaking, or discoloration or have been damaged during construction. Remove defective or damaged coating. Clean and recoat repair area in accordance with this Item.

4.2.2.1. **Epoxy Waterproofing**. Mix epoxy in conformance with manufacturer's instructions. Apply the coating on a dry surface at a maximum application rate of 100 sq. ft. per gallon. Apply a thin uniform film of mixed epoxy to the substrate using a short nap roller or brush. The epoxy may be sprayed in conformance with the thinning requirements of the manufacturer. No more than 15% reduction is permitted.

Match the color of the applied coating with the color standard as shown on the plans. Apply when ambient temperature is between 50°F and 100°F.

4.2.2.2. **Adhesive Grout**. Apply coating on a moistened surface to a uniform minimum thickness of 1/16 in. Apply when ambient temperature is at least 50°F.

4.3. **Special Surface Finishes**. Submit a work plan to the Engineer for any special finish shown on the plans. Include in the work plan the type of aggregates, materials, variation of panel or pattern arrangement, dimensions, construction methods, and other features affecting the work as necessary for the "Special Surface Finish" specified.

4.3.1. **Blast Finish**. Provide surface profile as shown on the plans, or meet the minimum requirements of Section 427.4.2.1., "Preparation." Construct a 4 × 4-ft. sample panel using the same concrete used in construction of the member to receive the blast finish. Prepare the surface of the sample panel to meet the

specified finish, and obtain approval of the sample finish. Use the approved sample panel finish as the standard for surfaces requiring a blast finish.

4.3.2. **Slurry Coat Finish**. Provide cementitious slurry coat finish to concrete surfaces within 14 days of placing concrete or later as approved. Water blast surface to moisten surface before application when application of slurry coat occurs more than 14 days after placing concrete. Do not apply slurry coat finish to surfaces receiving another type of coating finish.

Submit for approval proposed slurry recipe including cement, latex concrete additive, with or without sand, and other additives before application. The Engineer will direct the level of surface texture the slurry coat will have, whether to include sand, and what fineness of sand is to be used. Tint mixture of slurry as specified on the plans and as directed. Maintain consistent slurry throughout project, only modifying recipe to account for color variations noticed as work progresses.

Rub in slurry using carborundum stone, stiff bristle brush, or other approved device. Limit thickness of applied slurry to a maximum of 1/16 in. Demonstrate application methods for slurry coat and obtain approval of proposed surface. Apply slurry coat to obtain a tightly adhering cementitious finish to concrete surface. Remove material and reapply if slurry coat is not tightly adhering or is cracked.

4.3.3. **Rub Finish**. Provide a finish to the surface by rubbing the surface with a carborundum stone or other approved material. Begin rubbing the surface immediately after forms have been removed. Provide blast finish or other finish as directed at no additional cost to the Department if rubbing surface is delayed to the point where the surface is dry and unable to be rubbed to produce an acceptable finish. Perform the requirements to obtain the ordinary surface finish specified in Section 420.4.13., “Ordinary Surface Finish,” concurrently with rubbing the surface. Rub concrete-patching areas after the patch material has thoroughly set and blend the patch in with the surrounding area to produce a surface with uniform color and texture where concrete patching is performed.

Keep the surface continuously wet after form removal until the rubbing is complete. Rub the surface sufficiently to bring the wetted concrete surface to a paste, producing a smooth, dense surface without pits, form marks, or other irregularities. Do not use cement grout to form the paste on the surface. Stripe the surface using a brush to conceal the rubbing pattern and allow the paste to reset. Wash the concrete with potable water after the paste has sufficiently set to leave it with a neat and uniform appearance and texture. Apply membrane curing, if required, in accordance with Item 420, “Concrete Substructures,” after rubbing is complete.

4.3.4. **Off-the-Form Finish**. Provide a finish with minimal surface defects and uniform color and texture by using non-staining, non-porous, high-quality forming materials. Use the same type of forming materials for like elements for the entire structure.

Use mortar-tight forms to prevent leakage and discoloration. Seal joints using compressible gasket material, caulk, or tape, or by other suitable means that are not detrimental to the concrete finish, if necessary. Use one brand and type of form-release agents for all surfaces unless another product produces a similar concrete surface appearance. Do not use barrier-type (e.g., wax, fuel oil, and carrier oil) release agents. Use form-release agents containing a rust inhibitor on steel forms. Clean rust off steel forms before use. Use plywood that will not cause discoloration of the concrete surface.

Direct special attention to consolidation and vibration of the concrete around the form surfaces to minimize bug holes. Modify concrete placement and vibration techniques if surface contains an excessive amount of bug holes. Remove all forms without interruption once form removal begins to prevent discoloration due to differing form curing times.

Do not use membrane curing on surfaces with off-the-form finish.

Repair honeycombed and spall areas with least dimension larger than 2 in. in accordance with the concrete surface repair procedures in Item 420 to obtain an ordinary surface finish as defined in Section 420.4.13., “Ordinary Surface Finish.” Patch honeycombed and spall areas with least dimension greater than 3/4 in. but

smaller than 2 in. by filling defect with repair material omitting the chipping operation. Do not patch honeycombed and spall areas with least dimension smaller than 3/4 in. Perform required repairs as soon as forms are removed. Match repair material color and texture with surrounding concrete surfaces. Minimize the area of repair by not smearing the repair material over acceptable concrete surfaces while attempting to blend the repair with the surrounding concrete. Cut out form ties at least 1/2 in. below the surface, and patch accordingly. Perform repair work as soon as possible after removing forms so that concrete and repair materials have similar ages. Replace or refurbish the forms when the Engineer determines defective formwork is causing an excessive amount of repair work.

4.3.5. **Form Liner Finish**. Provide patterned finish as shown on the plans. Do not splice form liner panels in a way that causes a noticeable transition or line between pieces. Wash and clean form liners after each use when the forms can be reused. Replace form liners that have become damaged or worn.

Construct a sample panel for each form liner finish. Approval is required to verify the sample panel meets the requirements shown on the plans and in conformance with specifications before beginning work. Upon approval, the sample panel becomes the model panel to which all other work will be compared. Deviation in color, grade, or depth from the model panel is grounds for rejection of the form liner finish. Removal of defective work may be necessary as determined by the Engineer and in accordance with the surface finish requirements in Item 420 to obtain an ordinary surface finish as defined in Section 420.4.13., "Ordinary Surface Finish."

Seal all form liner joints in a manner acceptable to the Engineer to prevent leakage at the surface.

4.3.6. **Exposed Aggregate Finish**. Provide exposed aggregate finish as shown on the plans. Provide a depth of finish between 3/8 in. and 1/2 in. unless directed otherwise.

Apply a concrete surface retarder that penetrates approximately 1/4 in. into the forms or concrete surface to help achieve the desired finish. Apply two or three coats to wood forms to account for absorption if necessary. Tape or caulk form joints to prevent escape of the retarder during the placing operations. Protect the form surfaces from sun and rain while exposed to the atmosphere. Re-treat form surfaces with retarder if disturbed. Protect adjacent areas of concrete not requiring exposed aggregate finish from the retarder.

Remove forms 12–15 hr. after concrete placement but not before concrete has gained sufficient strength to support the self-weight of the member, unless directed otherwise. Expose the aggregate for the finish immediately after form removal. Remove the grout paste covering the aggregate to be exposed by an approved method. Do not loosen the aggregate by the grout removal operation. Maintain required curing on all surfaces except for the time while the aggregate is being exposed. Cure using wet mats or membrane after the aggregate is exposed.

Repair defective areas as determined by the Engineer.

Re-clean exposed aggregate surfaces by an approved method. Apply a coat of clear Type II permanent anti-graffiti coating to cleaned exposed aggregate surface. Apply anti-graffiti coatings by spray, roller, or brush at the application rates recommended by the manufacturer and in accordance with Item 740, "Graffiti Removal and Anti-Graffiti Coating."

5. MEASUREMENT

When surface finishes for concrete are shown on the plans to be a pay item, measurement will be by the square foot of the type of surface finish specified. This is a plans quantity measurement Item. The quantity to be paid is the quantity shown in the proposal, unless modified by Article 9.2., "Plans Quantity Measurement." Additional measurement or calculations will be made if adjustments of quantities are required.

6. PAYMENT

Unless otherwise shown on the plans, the work performed, materials furnished, equipment, labor, tools, and incidentals will not be paid for directly, but will be subsidiary to pertinent Items.

When a surface finish for concrete is specified as a pay item, the work performed and materials furnished in accordance with this Item and measured as provided under “Measurement” will be paid for at the unit price bid for “Adhesive Grout Finish,” “Concrete Paint Finish,” “Opaque Sealer Finish,” “Silicone Resin Paint Finish,” “Epoxy Waterproof Finish,” or “Blast Finish.” This price is full compensation for materials; cleaning and preparing surfaces; application of materials; and equipment, labor, tools, and incidentals.

Slurry coat, rub, off-the-form, form liner, or exposed aggregate finishes (including anti-graffiti coating) will not be paid for under this Item, but will be subsidiary to other pertinent Items.

Item 432
Riprap

1. DESCRIPTION

Furnish and place concrete, stone, cement-stabilized, or special riprap.

2. MATERIALS

Furnish materials in accordance with the following.

- Item 420, “Concrete Substructures”
- Item 421, “Hydraulic Cement Concrete”
- Item 431, “Pneumatically Placed Concrete”
- Item 440, “Reinforcement for Concrete”
- DMS-6200, “Filter Fabric”

2.1. **Concrete Riprap**. Use Class B concrete unless otherwise shown on the plans.

2.2. **Pneumatically Placed Concrete Riprap**. Use Class II concrete that meets the requirements of Item 431, unless otherwise shown on the plans.

2.3. **Stone Riprap**. Use durable natural stone with a bulk specific gravity of at least 2.50 as determined in accordance with Tex-403-A, unless otherwise shown on the plans. Provide stone that, when tested in accordance with Tex-411-A, has weight loss of no more than 18% after five cycles of magnesium sulfate solution.

Perform a size verification test on the first 5,000 sq. yd. of finished riprap stone for all types of stone riprap at a location determined by the Engineer. Test the riprap stone in accordance with ASTM D5519, Test Method D, unless otherwise directed. Additional tests may be required. Do not place additional riprap until the initial 5,000 sq. yd. of riprap has been approved.

Provide grout or mortar in accordance with Item 421 when specified. Provide grout with a consistency that will flow into and fill all voids.

Provide filter fabric in accordance with DMS-6200. Provide Type 2 filter fabric for protection stone riprap, unless otherwise shown on the plans. Provide Type 2 filter fabric for Type R, F, or Common stone riprap when shown on the plans.

2.3.1. **Type R**. Use stones between 50 and 250 lb., with at least 50% of the stones heavier than 100 lb.

2.3.2. **Type F**. Use stones between 50 and 250 lb., with at least 40% of the stones heavier than 100 lb. Use stones with at least one broad flat surface.

2.3.3. **Common**. Use stones between 50 and 250 lb. Use stones that are at least 3 in. in their least dimension. Use stones that are at least twice as wide as they are thick. When shown on the plans or approved, material may consist of broken concrete removed under the Contract or from other approved sources. Cut exposed reinforcement flush with all surfaces before placement of each piece of broken concrete.

2.3.4. **Protection**. Use boulders or quarried rock that meets the gradation requirements shown in Table 1. Both the width and the thickness of each piece of riprap must be at least 1/3 of the length. When shown on the plans or as approved, material may consist of broken concrete removed under the Contract or from other approved

sources. Cut exposed reinforcement flush with all surfaces before placement of each piece of broken concrete. Determine gradation of the finished, in-place, riprap stone under the direct supervision of the Engineer in accordance with ASTM D5519, Test Method D, unless otherwise directed.

Table 1
In-Place Protection Riprap Gradation Requirements

Nominal Size	Maximum Weight (lb.)	90% Weight[1] (lb.)	50% Weight[2] (lb.)	Minimum 8% Weight[3] (lb.)
12 in.	200	80–180	30–75	3
15 in.	320	170–300	60–165	20
18 in.	530	290–475	105–220	22
21 in.	800	460–720	175–300	25
24 in.	1,000	550–850	200–325	30
30 in.	2,600	1,150–2,250	400–900	40
36 in.	4,400	2,200–3,900	800–1,700	140

1. The 90% weight is the stone weight heavier than 90% of the individual riprap stones, and lighter than 10% of individual riprap stones.
2. The 50% weight is the stone weight heavier than 50% of individual riprap stones, and lighter than 50% of individual riprap stones.
3. The 8% weight is the stone weight heavier than 8% of individual riprap stones, and lighter than 92% of individual riprap stones.

The Engineer may require in-place verification of the stone gradation. Determine the in-place gradation of the riprap stone by taking linear transects along the riprap and measuring the intermediate axis of the stone at select intervals. Place a tape measure along the riprap and determine the intermediate axis size of the stone at 2-ft. intervals. Measure at least 100 stones, either in a single transect or in multiple transects, then follow ASTM D5519, Test Method D to determine the gradation, unless otherwise directed. Table 2 is a guide for comparing the stone size in inches to the stone weight shown in Table 1.

Table 2
Protection Riprap Stone Size[1]

Nominal Size	Dmax (in.)	D90 (in.)	D50 (in.)	D8 (in.)
12 in.	13.76	10.14–13.29	7.31–9.92	3.39
15 in.	16.10	13.04–15.75	9.21–12.91	6.39
18 in.	19.04	15.58–18.36	11.10–14.21	6.59
21 in.	21.85	18.17–21.09	13.16–15.75	6.88
24 in.	23.53	19.28–22.29	13.76–16.18	7.31
30 in.	32.36	24.65–30.84	17.34–22.72	8.05
36 in.	38.56	30.61–37.04	21.85–28.09	12.22

1. Based on a specific gravity of 2.5 and using the following equation for the intermediate axis diameter: $D = (12 \text{ in./ft.}) * \{(W)/(Gs * 62.4 * 0.85)\}^{1/3}$

   where:
   D = intermediate axis diameter (in.)
   W = weight of stone (lb.)
   Gs = Specific gravity of stone

   Note—If the specific gravity of the stone is greater than 2.5, then the above equation can be used to determine the appropriate size using the actual specific gravity.

When bedding is required, provide bedding stone that, in place, meets the gradation requirements shown in Table 3 or as otherwise shown on the plans. If the nominal size of the protection riprap is less than or equal to 30 in., verify the gradation of the bedding material in accordance with Tex-401-A unless otherwise directed. If the nominal size of the protection riprap is equal to 36 in., verify the gradation of the bedding material in accordance with ASTM D5519, Test Method D, unless otherwise directed.

Table 3
Protection Riprap Bedding Material Gradation Requirements

Nominal Size <36 in.		Nominal Size = 36 in.	
Sieve Size (Sq. Mesh)	% by Weight Passing	Sieve Size (Sq. Mesh)	% by Weight Passing
3”	100	6”	100
1-1/2”	50–80	4”	35–75
3/4”	20–60	3”	45–60
#4	0–15	2”	0–15
#10	0–5	–	–

2.4. **Cement-Stabilized Riprap**. Provide aggregate that meets the requirements of Item 247, “Flexible Base,” for the type and grade shown on the plans. Use cement-stabilized riprap with 7% hydraulic cement by dry weight of the aggregate unless otherwise directed.

2.5. **Special Riprap**. Furnish materials for special riprap as shown on the plans.

3. CONSTRUCTION

Dress slopes and protected areas to the line and grade shown on the plans before the placement of riprap. Place riprap and toe walls as shown on the plans or as directed.

3.1. **Concrete Riprap**. Reinforce concrete riprap with 6 × 6 – W2.9 × W2.9 welded wire fabric or with No. 3 or No. 4 reinforcing bars spaced at a maximum of 18 in. in each direction unless otherwise shown on the plans. Alternative styles of welded wire fabric that provide at least 0.058 sq. in. of steel per foot in both directions may be used if approved. A combination of welded wire fabric and reinforcing bars may be provided when both are permitted. Provide a minimum 6-in. lap at all splices. Provide horizontal cover of at least 1 in. and no more than 3 in. at the edge of the riprap. Place the first parallel bar no more than 6 in. from the edge of concrete. Use approved supports to hold the reinforcement approximately equidistant from the top and bottom surface of the slab. Adjust reinforcement during concrete placement to maintain correct position.

Sprinkle or sprinkle and consolidate the subgrade before the concrete is placed as directed. All surfaces must be moist when concrete is placed.

Compact and shape the concrete once it has been placed to conform to the dimensions shown on the plans. Finish the surface with a wood float after it has set sufficiently to avoid slumping to secure a smooth surface or broom finish as approved.

Cure the riprap immediately after the finishing operation in accordance with Item 420.

3.2. **Stone Riprap**. Provide the following types of stone riprap when shown on the plans.

- **Dry Riprap**. Stone riprap with voids filled with only spalls or small stones.
- **Grouted Riprap**. Type R, F, or Common stone riprap with voids grouted after all the stones are in place.
- **Mortared Riprap**. Type F stone riprap laid and mortared as each stone is placed.

Use spalls and small stones lighter than 25 lb. to fill open joints and voids in stone riprap, and place to a tight fit.

Place mortar or grout only when the air temperature is above 35°F. Protect work from rapid drying for at least 3 days after placement.

For slope or wave protection, if filter fabric is required, place filter fabric with its long axis running up and down the slope unless otherwise approved. For stream bank protection, if filter fabric is required, place the filter fabric with its long axis parallel to the centerline of the channel unless otherwise approved. Overlap the uphill or upstream sheet over the downhill or downstream sheet. For above water applications, ensure

adjacent sheets of filter fabric have a minimum overlap of 2 ft. in each direction. Secure filter fabric in place with nails or pins. Use 12-in. long, 3/16-in. diameter nails with 1.5-in. washers, or U-shaped steel pins with each leg at least 9 in. long. Space nails or pins at a maximum of 10 ft. in each direction and 5 ft. along the seams. Along the seams, place nails or pins through both strips of filter fabric at approximately the midpoint of the overlap. Place additional nails or pins as necessary to hold the filter fabric in position. Alternative anchorage and spacing may be used when approved. Keep the fabric material free of tension, stress, folds, wrinkles, or creases.

Methods for underwater filter placement must be approved before installation. For underwater placement, filter fabric should be unrolled in the direction of flow, overlapped at least 3 ft., and secured with sandbags, rocks, nails, or pins to prevent distortion. To prevent segregation and transport, underwater installation of a granular filter must be by clamshell bucket or tremie, with the granular material released on or very near the bed, unless otherwise approved. Underwater placement of a granular filter is permitted only if the water velocity is less than 5 ft. per second unless otherwise approved.

Any defects, tears, holes, flaws, or damage to filter fabric may be cause for rejection. Repair torn or punctured filter fabric by placing an additional layer of filter fabric over the damaged area, ensuring a minimum overlap of 3 ft. beyond the damaged area in all directions, and securing the filter fabric in place with pins or nails. Store filter fabric out of direct sunlight and cover the filter fabric as soon as possible after placement, but within 3 days.

3.2.1. **Type R**. Construct riprap as shown in Figure 1 on the *Stone Riprap Standard* and as shown on the plans. Place stones in a single layer with close joints so most of their weight is carried by the earth and not the adjacent stones. Place the upright axis of the stones at an angle of approximately 90° to the embankment slope. Place each course from the bottom of the embankment upward with the larger stones in the lower courses.

Fill open joints between stones with spalls. Place stones to create a uniform finished top surface. Do not exceed a 6-in. variation between the tops of adjacent stones. Replace, embed deeper, or chip away stones that project more than the allowable amount above the finished surface.

Prevent earth, sand, or foreign material from filling the spaces between the stones when the plans require Type R stone riprap to be grouted. Wet the stones thoroughly after they are in place, fill the spaces between the stones with grout, and pack. Sweep the surface of the riprap using a stiff broom after grouting.

3.2.2. **Type F**.

3.2.2.1. **Dry Placement**. Construct riprap as shown in Figure 2 on the *Stone Riprap Standard*. Set the flat surface on a prepared horizontal earth bed and overlap the underlying course to secure a lapped surface. Place the large stones first, roughly arranged in close contact. Fill the spaces between the large stones with suitably sized stones placed to leave the surface evenly stepped and conforming to the contour required. Place stone to drain water down the face of the slope.

3.2.2.2. **Grouting**. Construct riprap as shown in Figure 3 on the *Stone Riprap Standard*. Size, shape, and lay large flat-surfaced stones to produce an even surface with minimal voids. Place stones with the flat surface facing upward parallel to the slope. Place the largest stones near the base of the slope. Fill spaces between the larger stones with stones of suitable size, leaving the surface smooth, tight, and conforming to the contour required. Place the stones to create a plane surface with a variation no more than 6 in. in 10 ft. from true plane. Provide the same degree of accuracy for warped and curved surfaces. Prevent earth, sand, or foreign material from filling the spaces between the stones. Wet the stones thoroughly after they are in place, fill the spaces between them with grout, and pack. Sweep the surface using a stiff broom after grouting.

3.2.2.3. **Mortaring**. Construct riprap as shown in Figure 2 on the *Stone Riprap Standard*. Lap courses as described for dry placement. Wet the stones thoroughly before placing mortar. Bed the larger stones in fresh mortar as they are being placed and shove adjacent stones into contact with one another. Spread excess mortar forced out during placement of the stones uniformly over them to fill all voids completely. Point up all joints roughly either with flush joints or shallow, smooth-raked joints as directed.

3.2.3. **Common**. Construct riprap as shown in Figure 4 on the *Stone Riprap Standard*. Place stones on a bed excavated for the base course. Bed the base course of stone well into the ground with the edges in contact. Bed and place each succeeding course in even contact with the preceding course. Use spalls and small stones to fill any open joints and voids in the riprap. Ensure the finished surface presents an even, tight surface, true to the line and grades of the typical sections.

Prevent earth, sand, or foreign material from filling the spaces between the stones when the plans require grouting common stone riprap. Wet the stones thoroughly after they are in place, fill the spaces between them with grout, and pack. Sweep the surface using a stiff broom after grouting.

3.2.4. **Protection**. Construct riprap as shown in Figure 5 on the *Stone Riprap Standard*. Place riprap stone on the slopes within the limits shown on the plans. Place stone for riprap on the filter fabric to produce a reasonably well-graded mass of riprap with the minimum practicable percentage of voids. Place riprap stone on top of the filter fabric, always starting at the bottom and working toward the top of any slope. Construct the riprap to the lines and grades shown on the plans or staked in the field. A tolerance of +6 in. and -0 in. from the slope line and grades shown on the plans is allowed in the finished surface of the riprap. Place riprap to its full thickness in a single operation. Avoid displacing the filter fabric. Ensure the entire mass of stones in its final position is free of objectionable pockets of small stones and clusters of larger stones. Do not place riprap in layers, and do not place it by dumping it into chutes, dumping it from the top of the slope, pushing it from the top of the slope, or any method likely to cause segregation of the various sizes. Obtain the desired distribution of the various sizes of stones throughout the mass by selective loading of material at the quarry or other source, or by other approved methods of placement that will produce the specified results. Rearrange individual stones using mechanical equipment or by hand if necessary to obtain a reasonably well-graded distribution of stone sizes. If required, use the bedding thickness shown on the plans and place stone for riprap on the bedding material to produce a reasonably well-graded mass of riprap with the minimum practicable percentage of voids.

3.3. **Pneumatically Placed Concrete Riprap, Class II**. Meet the requirements of Item 431. Provide reinforcement as shown on the plans and in accordance with Item 440. Support reinforcement with approved supports throughout placement of concrete.

Give the surface a wood-float finish or a gun finish as directed. Cure the riprap with membrane-curing compound immediately after the finishing operation in accordance with Item 420.

3.4. **Cement-Stabilized Riprap**. Follow the requirements of the plans and the provisions for concrete riprap except when reinforcement is not required. The Engineer will approve the design and mixing of the cement-stabilized riprap.

3.5. **Special Riprap**. Construct special riprap as shown on the plans.

4. MEASUREMENT

This Item will be measured by the cubic yard of material complete in place. Volume will be computed based on the measured area in place and the thickness and toe wall width shown on the plans.

If required on the plans, the pay quantity of the bedding material for stone riprap for protection to be paid for will be measured by the cubic yard as computed from the measured area in place and the bedding thickness shown on the plans.

5. PAYMENT

The work performed and materials furnished in accordance with this Item and measured as provided under "Measurement" will be paid for at the unit price bid for "Riprap" of the type, nominal size, and void-filling technique (dry, grout, or mortar) specified, as applicable. This price is full compensation for furnishing, hauling, and placing riprap and for filter fabric, expansion joint material, concrete and reinforcing steel, grout and mortar, scales, test weights, equipment, labor, tools, and incidentals.

Payment for excavation of toe wall trenches, for all necessary excavation below natural ground or bottom of excavated channel, and for shaping of slopes for riprap will be included in the unit price bid per cubic yard of riprap.

When bedding is required for protection stone riprap, payment will be made at the unit price bid for “Bedding Material” of the thickness specified. This price is full compensation for furnishing, hauling, placing, and maintaining the stone bedding material until placement of the riprap cover is completed and accepted; excavation required for placement of bedding material; and equipment, scales, test weights, labor, tools, and incidentals. No payment will be made for excess thickness of bedding or for material required to replace embankment material lost by rain wash, wind erosion, or otherwise.

Item 434
Bridge Bearings

1. DESCRIPTION

Furnish and install bearings for the support of bridge superstructure and substructure members. Bridge bearings under this specification consist of the two following categories and subcategories.

1.1. **Elastomeric Bridge Bearings**.

- **Plain Elastomeric Bearings**. Consisting of elastomer only.
- **Laminated Elastomeric Bearings**. Consisting of alternating individual layers of elastomer and steel laminates, with or without a steel top plate and special components (steel guide bars and bottom plate).
- **Sliding Elastomeric Bearings**. Consisting of a steel top (sole) plate with a stainless steel facing (upper component) bearing on a lower component. The lower component consists of a layer of polytetrafluoroethylene (PTFE) recessed and bonded to a steel plate that is vulcanized to the top of a laminated elastomeric bearing pad with or without special components (steel guide bars and bottom plate).

Plain and laminated elastomeric bridge bearings are designated by hardness (durometer), size, and configuration and, in the case of laminated bearings, by the thickness of the individual layers of elastomer and the size and position of any steel top plates.

1.2. **High Load Multi-Rotational (HLMR) Bearings**.

- **Disc Bearings**. Consisting of a polyether urethane disc contained between upper and lower steel bearing plates. The bearing has a shear-resisting mechanism to prevent relative horizontal movement of the bearing plates and transmit horizontal loads.
- **Pot Bearings**. Consisting of a plain elastomeric disc confined by a shallow steel cylinder (pot) and a steel piston that engages the cylinder sufficiently to prevent their relative horizontal movement.

Provision for sliding movements (if required) uses a separate steel top plate with stainless steel facing (upper component) bearing on a lower component, and a lower component with a layer of PTFE bonded to the top of the upper steel bearing plate of the HLMR assembly. If required on the plans, restriction of lateral movement is provided by guide bars integrated with the steel top plate and interface components of the same stainless-steel facing and PTFE layer.

HLMR bridge bearings are designated by configuration (fixed, multi-direction expansion, or guided expansion) and the vertical service reaction requirements. Fixed configurations allow rotation about the horizontal axis and prevent horizontal movement in all directions. Multi-direction expansion configurations allow rotation about the horizontal axis and horizontal movement in all directions. Guided expansion configurations allow rotation about the horizontal axis and horizontal movement in one direction as shown on the plans, while guide bars and keyways restrict horizontal movement in the orthogonal direction. Provide either disc bearings or pot bearings unless a disc or pot bearing is specifically required on the plans. Provide a fabricator-designed HLMR bearing meeting the performance and dimensional criteria shown on the plans and in accordance with Section 434.2.3., “HLMR Bearings.”

Bearings consisting of hinged steel bolster and rocker shoes; steel flat, cylindrical, or spherical bearings; and single and multiple steel roller bearings are not covered by this Item and must be in accordance with Item 442, “Metal for Structures,” unless otherwise shown on the plans.

2. MATERIALS

2.1. **Plain and Laminated Elastomeric Bearings**. Manufacturers of plain and laminated elastomeric bearing pads must be approved in accordance with DMS-7365, "Qualification Procedure for Elastomeric Bridge Bearing Pad Manufacturers." The Materials and Tests Division (MTD) maintains an MPL of approved elastomeric bridge bearing pad manufacturers.

Manufacturers that produce laminated elastomeric bearings with a top steel plate or special components (steel guide bars and bottom plate) must comply with AASHTO's NTPEP Committee Work Plan for Evaluation of Plain and Laminated Elastomeric Bridge Bearing Manufacturers. DMS-7365 does not apply to manufacturers of bridge bearings where the laminated elastomeric bearing pad is a component of the completed bearing assembly.

2.1.1. **Elastomer**. Provide elastomer for bearings formulated from previously unvulcanized 100% virgin polychloroprene rubber polymers meeting the physical properties, heat resistance, and compression set requirements of AASHTO M 251, Table 1, Table 3, and Table 4, respectively, unless otherwise shown on the plans. Do not provide bearings containing previously vulcanized synthetic rubber or other synthetic rubber-like polymers. Perform material tests on the finished product in conformance with the applicable test methods. Do not use standard laboratory test slabs for this purpose. Prepare test specimens from the finished product in accordance with ASTM D3183.

Obtain approval for each elastomer formulation before use on Department projects. Submit certified test results to MTD to prequalify and obtain approval of a particular formulation. Show actual test values obtained and the required values for the physical properties, heat resistance, and compression set of the elastomer when tested for compliance with the minimum requirements of AASHTO M 251, Table 1, Table 3, and Table 4, respectively.

Forward samples (freight prepaid) to MTD or their contracted testing laboratory when directed.

Submit only elastomer of the type or types to be supplied. Submit prequalification samples consisting of two finished bearing pads typical of the formulation and workmanship for Department projects. Submit two samples of each type when laminated and plain bearings are required. Laminated sample bearing pads may represent both plain bearing pads and laminated bearing pads for an elastomer formulation.

Plain sample bearing pads must measure 9 in. × 19 in. × 1 in. Laminated sample bearing pads must measure 9 in. × 14 in. × 1-1/2 in. with the following number of steel laminates:

- 50 durometer—three steel laminates,
- 60 durometer—two steel laminates, and
- 70 durometer—two steel laminates.

The Department will perform bond strength testing of laminated prequalification samples in accordance with Tex-601-J, Part I—"Bond Strength Test Method 1." The tested sample must achieve a minimum bond strength of 40 lbf/in. of width. The Department will verify the presence of chlorinated compounds (neoprene) in the elastomer in accordance with Tex-601-J, Part III—"Chlorinated Compound Test Method 3."

Costs associated with testing elastomer formulations failing to conform to the requirements of this Item are borne by the bearing manufacturer. This cost will be assessed at the rate established by MTD at the time of testing.

Certify that the submitted samples are of the same basic elastomer formulation and of equivalent cure as the finished products to be furnished on Department projects.

Complete prequalification testing will be performed for each formulation at least once every 2 yr. and when necessary.

2.1.2. **Steel Laminates**. Provide steel laminates, for laminated bearings, of commercial-grade steel strip or sheet with a thickness of 0.105 ± 0.015 in.

2.1.3. **Steel Top Plates**. Provide steel top plates, when required for laminated bearings, as shown on the plans.

2.1.4. **Special Components**. Provide steel guide bars and bottom plates, when required for laminated bearings, as shown on the plans.

2.1.5. **Coatings**. Provide protective coatings for steel component materials in accordance with Item 445, "Galvanizing," or DMS-8104, "Paint, Shop Application for Steel Bridge Members," unless otherwise shown on the plans.

2.2. **Sliding Elastomeric Bearings**.

2.2.1. **Lower Component**.

2.2.1.1. **PTFE**. Furnish PTFE materials that are pure virgin PTFE fluorocarbon resin, unfilled. The finished materials must exhibit the physical properties shown in Table 1.

Table 1
Required PTFE Physical Properties

Physical Property	Test Method	Value (Unfilled)
Tensile strength, psi	ASTM D4894	2,800 Min
Elongation, %	ASTM D4894	200 Min
Melting point	ASTM D4894	622 ±4°F
Specific gravity	ASTM D792	2.16 ± 0.03

2.2.1.2. **Laminated Elastomeric Bearing Pad and Steel Plate**. Furnish laminated elastomeric bearing pads in accordance with Section 434.2.1., "Plain and Laminated Elastomeric Bearings," and Section 434.3.1., "Plain and Laminated Elastomeric Bearings." Provide steel plates attached to laminated elastomeric bearing pads as shown on the plans. Bearing manufacturers that produce the laminated elastomeric bearing pad component of a sliding elastomeric bearing must comply with the AASHTO Product Evaluation & Audit Solutions Committee Work Plan for Evaluation of Plain and Laminated Elastomeric Bridge Bearing Manufacturers.

2.2.2. **Upper Component**.

2.2.2.1. **Steel Top (Sole) Plates**. Provide steel top (sole) plates as shown on the plans and finished to ANSI #500 or better on the surface interfacing with the stainless steel sheet.

2.2.2.2. **Stainless Steel**. Provide Type 304 stainless steel sheet in accordance with ASTM A240. The thickness must be at least 1/16 in. unless otherwise shown on the plans.

2.2.3. **Special Components**. Provide steel guide bars and bottom plates, when required for sliding elastomeric bearings, as shown on the plans.

2.2.4. **Coatings**. Provide coating materials in accordance with Item 445 and DMS-8104 unless otherwise shown on the plans.

2.3. **HLMR Bearings**.

2.3.1. **Structural Design.** Provide a fabricator-developed design for the HLMR (disc or pot) bearings, meeting the service and factored vertical load capacity, service and factored horizontal load capacity, rotational capacity, and translation capacity requirements shown on the plans and augmented by the requirements of this Item. Provide a bearing capable of transmitting 15% of the service vertical force as a factored horizontal load if no horizontal load capacity is shown on the plans. Provide a design that uses sole plate geometry or a grout interface to accommodate the longitudinal and transverse aspects of the bridge grade and does not require

the bearing to accommodate this in rotation unless otherwise shown on the plans. If the bridge element supported by the bearing is cambered for dead load to be applied after the bearing is positioned, the dead load design rotation of the elastomer may be neglected provided the fabricator-developed design has checked the bearing for this temporary condition to ensure no damage occurs and there is no metal-to-metal contact. Provide a design in conformance with the AASHTO LRFD *Bridge Design Specifications* and AASHTO LRFD *Bridge Construction Specifications*. Assume the plan rotations do not include requirements for uncertainties and construction tolerance in accordance with the AASHTO specifications, unless shown on the plans.

2.3.2. **Maintenance Functionality**. Provide a fabricator-developed design that allows future removal with a maximum vertical jacking height of 1/4 in. after the load is removed. Provide a design with minimum 4-in. distance between the bottom of masonry plate and top of sole plate.

2.3.3. **Elements of HLMR Bearings**.

2.3.3.1. **Lower Component.**

2.3.3.1.1. **Polyether Urethane for Disc Bearings**. Furnish polyether urethane discs conforming to the material requirements of the AASHTO LRFD *Bridge Design Specifications* and AASHTO LRFD *Bridge Construction Specifications*, and the load and rotation demand indicated in Section 434.2.3.1., "Structural Design."

2.3.3.1.2. **Elastomeric Rotational Element for Pot Bearings**. Provide elastomer conforming to the material requirements of the AASHTO LRFD *Bridge Design Specifications* and AASHTO LRFD *Bridge Construction Specifications*, and the load and rotation demand indicated in Section 434.2.3.1., "Structural Design," with the exception that use of virgin natural polyisoprene (natural rubber) is not allowed.

2.3.3.1.3. **PTFE**. For expansion HLMR bearings, furnish PTFE materials that are pure virgin PTFE fluorocarbon resin, unfilled. The finished materials must exhibit the physical properties shown in Table 1. Provide PTFE that is bonded to the top steel bearing plate of the HLMR assembly in accordance with AASHTO LRFD *Bridge Construction Specifications*.

2.3.3.2. **Upper Component**.

2.3.3.2.1. **Steel Top Plates**. Provide steel top plates in accordance with the AASHTO LRFD *Bridge Design Specifications* and AASHTO LRFD *Bridge Construction Specifications*. Provide an ANSI #500 or better finish on the surface interfacing with the stainless steel sheet for expansion bearings. At the fabricator's option, the steel top plate may serve the function of the sole plate between the supported structure and the HLMR bearing assembly, provided it matches geometric bevel requirements, plan dimensions, and minimum thickness for the sole plate shown on the plans, while maintaining the performance requirements and avoiding damage due to installation. Otherwise, provide connectivity between the top plate and the sole plate or grouted interface as shown on the plans. Coordinate any necessary adjustments to the sole plate geometry, connection method, or grouted interface with the Engineer to ensure compatibility with the structural design, before ordering any materials. Provide bolted connections for connection to steel trapezoidal box girder superstructures.

2.3.3.2.2. **Stainless Steel**. Provide Type 304 stainless steel sheet in accordance with ASTM A240. The thickness must be at least 1/16 in. unless otherwise shown on the plans.

2.3.3.3. **Miscellaneous Components**.

2.3.3.3.1. **Lateral Guides**. Provide guide bars integrated with the steel top plate and interface components of stainless steel facing and PTFE for guided HLMR expansion bearings. Submit alternate interface components to stainless steel and PTFE for review and approval. Provide details indicating guide bar, stainless steel, and PTFE attachment and design to sustain the lateral loads shown on the plans while maintaining unimpeded expansion capability.

2.3.3.3.2. **Piston**. Provide in accordance with the AASHTO LRFD *Bridge Design Specifications* and AASHTO LRFD *Bridge Construction Specifications*.

2.3.3.3.3. **Pot**. Provide in accordance with the AASHTO LRFD *Bridge Design Specifications* and AASHTO LRFD *Bridge Construction Specifications*.

2.3.3.3.4. **Sealing Rings**. Provide in accordance with the AASHTO LRFD *Bridge Design Specifications* and AASHTO LRFD *Bridge Construction Specifications*.

2.3.3.3.5. **Sealants**. Provide in accordance with the AASHTO LRFD *Bridge Design Specifications* and AASHTO LRFD *Bridge Construction Specifications*.

2.3.3.4. **Supporting Masonry Plate and Anchor Rods**. Coordinate any necessary adjustments to masonry plate geometry, connection method, or grout interface with the Engineer to ensure compatibility with the structure design before ordering any materials. Provide medium-strength, mild steel, or better type anchor rods in accordance with Item 449, "Anchor Bolts," including nuts and washers, unless otherwise shown on the plans.

2.3.3.5. **Coatings**. Provide coating materials as required in accordance with Item 445 or DMS-8104, unless otherwise shown on the plans. Submit fabricator-preferred alternative coatings to the Engineer for review and approval.

3. CONSTRUCTION

3.1. **Plain and Laminated Elastomeric Bearings**. Electronically submit shop drawings for the complete assembly before fabrication of laminated elastomeric bearings with or without steel top plates or special components as shown on the plans and in accordance with Item 441, "Steel Structures." Provide a bearing layout with the shop drawings.

Mold together components of a laminated bearing to form an integral unit free of voids or separations in the elastomer or between the elastomer and the steel laminates or plates, unless otherwise shown on the plans. Provide well-vulcanized elastomer between the laminates or plates and on the outer surfaces of the bearing that is uniform and integral and resists separation by mechanical means into separate, definite, well-defined elastomeric layers. Evidence of this layered construction, either at the outer surfaces or within the bearing, will be cause for rejection. Repair of damaged elastomer on sides of laminated bearings is not allowed for product acceptance. Repair of damaged elastomer on top or bottom surfaces of laminated bearings is allowed when approved.

Cover edges of steel laminates with 1/8–1/4 in. of elastomer, except exposure of the laminates will be permitted at approved laminate-restraining devices and around holes entirely enclosed in the finished structure. Position laminates within 1/8 in. of plan location.

Plain bearings may be molded individually, cut from previously molded strips or slabs molded to the full thickness of the finished bearings, or extruded and cut to length. The finish of cut surfaces must be in accordance with ANSI 250 or smoother. The finished bearings must have no voids or separations detectable either at the bearing surfaces or within the bearing. Plain elastomeric bearings must be well-vulcanized, uniform, and integral units of such construction that the bearing is incapable of being separated by any mechanical means into separate, definite, well-defined elastomeric layers. Evidence of layered construction either at the outer surfaces or within the bearing will be cause for rejection.

The permissible variation from the dimensions and configuration shown on the plans for both plain and laminated bearings will be in accordance with AASHTO M 251, Table 2. Flash tolerance, finish, and appearance must meet the requirements of the latest edition of the *Rubber Handbook* published by the U.S. Tire Manufacturers Association (RMA) F3 and RMA T.063 for molded bearings, and RMA F2 for extruded bearings.

Perform required welding in accordance with Item 441. Manufacture guide bars, when required, so adjacent top and bottom bar surfaces are parallel to within 1/16 in. in the assembled position. The tolerance for diameter of anchor bolt holes is +1/8 in., -0. The maximum deviation for flatness of steel plates is 1/16 in. in any 24 in. or as shown on the plans.

3.1.1. **Markings**. Mark the bearing type on the surface of each bearing as shown on the plans. The marking must remain legible until placement in the structure. Permanently mark, in addition, laminated bearings with:

- manufacturer's name or trademark,
- lot number, and
- date of manufacture (month-year).

Place this permanent marking on a face that is visible after erection of the bridge unless otherwise shown on the plans.

3.1.2. **Testing and Acceptance**. Perform testing, inspection, and acceptance of plain and laminated elastomeric bearing pads in accordance with DMS-7365.

For laminated elastomeric bearings with a steel top plate or special components (steel guide bars and bottom plate), apply a compression load of 2,250 psi or a stress approved by the Engineer to each bearing. Provide calibrated equipment per ASTM E4 for this compression testing. Each bearing will be acceptable if there is no visible evidence of bond failure or other damage and if the finished bearing meets other pertinent portions of this Item. Samples may be taken if the quality of production becomes questionable.

3.1.2.1. **Laminated Bearings**. Subject each laminated bearing to a compression of 2,250 psi or an approved stress. Provide calibrated equipment in accordance with ASTM E4 for this compression testing. Each bearing will be acceptable if there is no visible evidence of bond failure or other damage and if the finished bearing meets other pertinent portions of this Item. Samples may be taken if the quality of production becomes questionable.

3.1.3. **Documentation**. Furnish certified laboratory test results on the elastomer properties of each batch or lot of compound for both plain and laminated bearings. Provide copies of certified mill test reports for laminated bearing steel top plates and any required steel special components.

3.1.4. **Storage**. Protect plain and laminated bearings from sunlight until placement in the structure.

3.1.5. **Field Methods**. Provide concrete surfaces for bearing areas under plain and laminated elastomeric bearings in accordance with Section 420.4.9., "Treatment and Finishing of Horizontal Surfaces."

Do not damage the elastomer when welding near bearings.

Damaged bearings will be subject to rejection and require replacement as directed.

3.2. **Sliding Elastomeric Bearings**. Electronically submit shop drawings for the complete assembly before fabrication of sliding elastomeric bearings as shown on the plans and in accordance with Item 441. Provide a bearing layout with the shop drawings.

Finish the steel top (sole) plate surface, interfacing with the stainless steel sheet, in accordance with Section 434.2.2.2.1., "Steel Top (Sole) Plates." Provide this finished surface flat to a tolerance of 1/32 in. Provide the remaining surface, outside the stainless steel sheet interface, flat to a tolerance of 1/16 in. in any 24 in.

Attach the stainless steel sheet to the steel top (sole) plate by continuous fillet welding around the edges using an approved welding electrode. Do not extend the weld above the sliding surface. Protect the sliding surface from weld spatter. Polish the stainless steel sheet to a bright mirror finish less than 20 micro-in., and solvent-clean to remove traces of polishing compound after attachment to the steel plate.

Fabricate the laminated elastomeric bearing pads in accordance with Section 434.3.1., "Plain and Laminated Elastomeric Bearings." Vulcanize the laminated elastomeric bearing pad to the PTFE-faced steel plate. Machine the steel plate recessed surface flat to a tolerance of 1/32 in. and within 1/32 in. of required depth. Bond the PTFE material to the steel plate recessed surface using an approved adhesive. Fit the PTFE material into the recessed surface with not more than 1/32-in. gaps around the perimeter.

Perform required welding in accordance with Item 441. Manufacture guide bars when required so that adjacent top and bottom bar surfaces are parallel to within 1/16 in. in the assembled position. The tolerance for diameter of anchor bolt holes is +1/8 in., -0 in.

3.2.1. **Markings**. Mark the bearing type on the surface of each sliding elastomeric bearing. The marking must remain legible until placement in the structure. Permanently mark the laminated elastomeric bearing pad with information in accordance with Section 434.3.1.1., "Markings."

3.2.2. **Testing and Acceptance**. Test a minimum of 10% of the sliding elastomeric bearing assemblies to a compressive strength of 2,250 psi or an approved stress. Provide calibrated equipment in accordance with ASTM E4 for this compression testing. No tested sliding elastomeric bearing may show visible damage to the PTFE or stainless steel surfaces or evidence of bond failure between the:

- PTFE-faced steel plate and laminated elastomeric bearing pad,
- steel laminates and elastomer within the laminated elastomeric bearing pad, or
- steel plate and PTFE.

Perform check tests if necessary on the steel, laminated elastomeric bearing pads, or PTFE material to verify the properties required in accordance with Section 434.2.2., "Sliding Elastomeric Bearings."

Bearings represented by test specimens passing the requirements of this Item will be approved for use in the structure subject to on-site inspection by the Engineer for visible defects.

3.2.2.1. **Lower Component**. Manufacture one additional bearing lower component per project for testing purposes. Notify MTD, which will sample a bearing lower component at random from the lot, after bearings have been manufactured for a project. Forward selected samples (freight prepaid) to MTD, or to their contracted testing laboratory when directed. Lower component samples will be tested in accordance with the following.

- Tex-601-J, Part II—"Adhesion Test Method 2." Adhesion between the PTFE material and steel plate must meet a minimum 20 lb. per inch of width;
- Tex-601-J, Part III—"Chlorinated Compound Test Method 3." Laminated bearing pad elastomer must contain chlorinated compounds (neoprene); and
- PTFE physical properties in accordance with Table 1, except for Melting Point Testing (ASTM D4894).

Costs associated with testing sliding elastomeric bearing lower component project samples failing to conform to these requirements are borne by the bearings manufacturer. This cost will be assessed at the rate established by MTD at the time of testing.

3.2.2.2. **Documentation**. Furnish copies of certified mill test reports for the steel top (sole) plate, stainless steel, PTFE-faced steel plate, and any required steel special components. Provide a manufacturer's certification that the PTFE material meets the requirements of this Item. Furnish certified laboratory test results on the elastomer properties of each batch or lot of compound for laminated elastomeric bearing pads.

3.2.3. **Storage**. Store sliding elastomeric bearings horizontally in a dry, sheltered area. Provide moisture- and dust-resistant wrapping maintained in good condition until installation. Protect bearings from damage, dirt, oil, grease, and other foreign substances.

3.2.4. **Field Methods**. Provide concrete surfaces for bearing areas under sliding elastomeric bearings in accordance with Section 420.4.9., "Treatment and Finishing of Horizontal Surfaces."

Refer to the plans for temperature setting corrections for all bridges and bearing alignment relative to a chord for curved bridges. Perform such adjustments as directed if the plans do not address these requirements.

Exercise care in any field welding required for the installation of a sliding elastomeric bearing to prevent damage to the elastomer, PTFE, or stainless steel surface. Repair damage to protective coating on the bearings and apply the final appearance coat in accordance with Item 446, "Field Cleaning and Painting Steel."

Damaged bearings will be subject to rejection and require replacement as directed.

3.3. **HLMR Bearings**. Electronically submit shop drawings for the complete assembly, before fabrication of HLMR bearings, as shown on the plans. Provide a bearing layout with the shop drawings, including geometric placement on substructure. Provide design calculations sealed by a licensed professional engineer.

3.3.1. **Markings**. Provide a permanent identification mark indicating each bearing's position in the structure and a direction arrow oriented in the forward station direction. Ensure the primary identification mark or a second such mark is provided at a visible location on the bearing after superstructure construction.

3.3.2. **Testing and Acceptance**. Coordinate arrangements for sampling and testing with MTD before manufacturing all or a significant number of bearings for the project. Coordinate with MTD the number and type of tests that must be observed by a designated MTD representative. Perform testing in accordance with Section 18, "Bearing Devices," of the AASHTO LRFD *Bridge Construction Specifications*. Use prequalification for certain tests only if approved by MTD.

Disassemble bearings for visual inspection after testing. Replace or repair any bearings that reveal malfunction, such as lift-off, galling between components, excessive deflection, yielding of steel, surface irregularities of stainless steel, and cold flow or bond failure of PTFE. Perform testing to validate performance of replaced or repaired bearings as directed.

3.3.3. **Storage**. Store HLMR bearings horizontally in a dry, sheltered area. Provide moisture- and dust-resistant wrapping maintained in good condition until installation. Lift bearings only from the underside. Protect bearings from damage, dirt, oil, grease, and other foreign substances.

3.3.4. **Field Methods**. Provide concrete surfaces for bearing areas under HLMR bearings in accordance with Section 420.4.9., "Treatment and Finishing of Horizontal Surfaces," unless otherwise shown on the plans or the HLMR bearing shop drawings.

Do not disassemble bearings unless otherwise approved with the guidance of the bearing fabricator. Clean any contaminated sliding surfaces as directed by the fabricator.

Place HLMR bearings on preformed fabric pads in accordance with Section 441.3.11.6., "Bearing and Anchorage Devices," unless otherwise shown on the plans or the shop drawings. Refer to the plans for temperature setting corrections for all bridges and bearing alignment relative to a chord for curved bridges. Perform such adjustments as directed if the plans do not address these requirements.

Exercise care in any field welding required for the installation of an HLMR bearing to prevent damage to the elastomer, disc element, PTFE, or stainless steel surface. Perform repair of damage to the prime coat on the bearings and apply the final appearance coat in accordance with Item 446.

Damaged bearings will be subject to rejection and require replacement as directed.

4. MEASUREMENT

4.1. **Plain and Laminated Elastomeric Bearings**. When plain and laminated elastomeric bearings are shown on the plans to be a pay item, measurement will be by each bearing.

4.2. **Sliding Elastomeric Bearings**. Sliding elastomeric bearings will be measured by each bearing.

4.3. **HLMR Bearings**. HLMR bearings will be measured by each bearing in a specified load range.

5. PAYMENT

5.1. **Plain and Laminated Elastomeric Bearings**. Plain and laminated elastomeric bearings used with precast prestressed concrete or rolled steel members will not be paid for directly, but will be subsidiary to pertinent Items.

For plain and laminated elastomeric bearings used with post-tensioned concrete superstructures, and with steel girders when specified as a pay item, the work performed and materials furnished in accordance with this Item and measured as provided under "Measurement" will be paid for at the unit price bid for "Elastomeric Bearing" of the type specified. This price is full compensation for materials, including anchor bolts, top plates, and steel special components; installation; and tools, equipment, labor, and incidentals.

5.2. **Sliding Elastomeric Bearings**. The work performed and materials furnished in accordance with this Item and measured as provided under "Measurement" will be paid for at the unit price bid for "Sliding Elastomeric Bearing" of the type specified. This price is full compensation for the stainless-steel faced top (sole) plate, the PTFE-faced steel plate vulcanized to the top of a laminated elastomeric bearing pad, the steel special components, and the anchor bolts required to connect the bearing between superstructure and substructure; installation; and tools, equipment, labor, and incidentals.

5.3. **HLMR Bearings**. The work performed and materials furnished in accordance with this Item and measured as provided under "Measurement" will be paid for at the unit price bid for "HLMR Bearing" of the type specified. This price is full compensation for the stainless-steel faced top (sole) plate, the PTFE-faced steel plate attached to the top bearing plate, the polyether urethane disc or elastomer layer, lateral guide components, shear restriction devices or outer cylinder pot, pot bearing seals, masonry plate, and the anchor bolts required to connect the bearing to the supporting structure; installation; and tools, equipment, labor, and incidentals.

Item 438
Cleaning and Sealing Joints

1. DESCRIPTION

Clean and seal joints in new or existing rigid concrete pavements and bridge decks. Resize joints in rigid concrete pavements and approach slabs as shown on the plans.

2. MATERIALS

Use sealants of the class shown on the plans that meet the requirements of DMS-6310, "Joint Sealants and Fillers," except as modified herein. Use primers recommended by the manufacturer of the sealant if required.

When a foam-type joint seal is specified, provide one of the listed systems shown on the plans with material meeting the requirements of Section 454.3.4., "Foam-Type Joint Seal."

Provide backer rods that are circular and are 25% larger than the joint opening. Use backer rods compatible with the sealant that do not react with or bond to the sealant.

3. EQUIPMENT

Use equipment that meets sealant manufacturer's recommendations. Use air compressors equipped with appropriate filters for removing oil and water from the air. Provide concrete saws with sufficient capacity to cut full depth of concrete pavement, approach slabs, and bridge decks.

4. CONSTRUCTION

Submit information from the sealant manufacturer showing recommended equipment and installation procedures before starting work. All equipment and procedures will be subject to approval. If the equipment causes damage to dowels, reinforcing steel, concrete, base, sub-base, or subgrade, repair the damage and change the procedure and equipment to prevent further damage.

When foam-type joint seal is shown on the plans, provide a technician associated with the joint seal manufacturer for training and installation of the initial joint. Provide written instructions from the manufacturer for joint seal installation. Measure all joint openings and size the width of joint seal in conformance with the manufacturer's specifications.

4.1. **Preparation**. Remove all debris, dirt, dust, saw cuttings, and other foreign material from joint by an approved method. Collect and dispose of all the removed material.

Remove existing preformed bituminous fiber board material or other spacer material the full depth of the joint along with all other debris in the joint opening. Resize the joint sealant space by sawing to the width and depth shown on the plans to accommodate the type of sealant specified.

Clean debris full depth of the joint, including from the diaphragm windows below the joints on concrete slab-and-girder (pan girder) and tee-beam bridges.

Abrasive-blast clean the vertical faces of joints armored with steel to remove all visible rust, paint, mill scale, and other forms of contamination, leaving a white metal appearance. Clean concrete and other surfaces by method approved and in conformance with the manufacturer's specifications before placing sealant. Air blast the joint after cleaning to remove all dust.

Saw-cut concrete pavement and concrete approach slab full depth to provide joint opening as shown on the plans and as directed. Clean all debris out of the joint full depth of concrete pavement.

4.2. **Sealing**. Place the sealant in conformance with the manufacturer's recommended procedures. Apply the primer, when required, at the specified rate and time interval before applying the sealant. Apply the sealant to dry joint surfaces unless otherwise recommended by the sealant manufacturer. Tool any sealant material that is not self-leveling to force the sealant against the joint surfaces.

Place approved support spacers into joints as shown on the plans for concrete pavement. Place a backer rod in the joint opening to prevent the sealant from flowing through the joint and to hold the sealant at its required elevation, unless directed otherwise. Set the top of the sealant and thickness of sealant as shown on the plans. Do not place sealant in an expansion-type joint if surface temperature is below 55°F or above 90°F.

5. MEASUREMENT

When shown on the plans to be a pay item, this Item will be measured by the foot of sealant placed.

6. PAYMENT

Unless otherwise shown on the plans, the work performed and materials furnished in accordance with this Item will not be paid for directly, but will be subsidiary to bid items of the Contract.

When shown as a pay item, the work performed and materials furnished in accordance with this Item and measured as provided under "Measurement" will be paid for at the unit price bid for "Cleaning and Sealing Existing Joints"; "Cleaning and Sealing Joints" of the class, if specified; "Cleaning and Sealing Joints (Foam)"; "Cleaning Existing Joints"; and "Resizing and Sealing Joints." This price is full compensation for furnishing all materials; sawing, routing, and cleaning the joint; installation of joint sealant; disposing of debris; and equipment, labor, tools, and incidentals.

Item 440
Reinforcement for Concrete

1. DESCRIPTION

Furnish and place reinforcement of the type, size, and details shown on the plans.

2. MATERIALS

Use deformed steel bar reinforcement unless otherwise specified or allowed.

2.1. **Approved Mills**. Before furnishing steel, producing mills of reinforcing steel for the Department must be pre-approved in accordance with DMS-7320, "Qualification Procedure for Reinforcing Steel Production Mills," by the Materials and Tests Division. The Department's MPL includes approved producing mills. Reinforcing steel obtained from unapproved sources will not be accepted.

2.2. **Deformed Steel Bar Reinforcement**. Provide deformed reinforcing steel conforming to one of the following:

- ASTM A615, Grade 60 or 80;
- ASTM A996, Type A, Grade 60;
- ASTM A996, Type R, Grade 60, permitted in concrete pavement only (Furnish ASTM A996, Type R bars as straight bars only and do not bend them. Bend tests are not required.); or
- ASTM A706, Grade 60 or 80.

Provide the grade of reinforcing steel shown on the plans. Provide Grade 60 if no grade is shown.

The nominal size, area, and weight of reinforcing steel bars this Item covers are shown in Table 1.

Table 1
Size, Area, and Weight of Reinforcing Steel Bars

Bar Size Number (in.)	Diameter (in.)	Area (sq. in.)	Weight per Foot (lb.)
3	0.375	0.11	0.376
4	0.500	0.20	0.668
5	0.625	0.31	1.043
6	0.750	0.44	1.502
7	0.875	0.60	2.044
8	1.000	0.79	2.670
9	1.128	1.00	3.400
10	1.270	1.27	4.303
11	1.410	1.56	5.313
14	1.693	2.25	7.650
18	2.257	4.00	13.60

2.3. **Smooth Steel Bar Reinforcement**. Provide steel conforming to ASTM A615 or meet the physical requirements of ASTM A36 for smooth bars that are larger than No. 3. Designate smooth bars by size number up to No. 4 and by diameter in inches above No. 4.

2.4. **Spiral Reinforcement**. Provide bars or wire for spiral reinforcement of the grade and minimum size or gauge shown on the plans.

Provide smooth or deformed wire conforming to ASTM A1064. Provide bars conforming to ASTM A615; ASTM A996, Type A; or ASTM A675, Grade 80, meeting dimensional requirements of ASTM A615.

2.5. **Weldable Reinforcing Steel**. Provide reinforcing steel conforming to ASTM A706 or with a maximum carbon equivalent (C.E.) of 0.55% if welding of reinforcing steel is required or desired. Provide a report showing the percentages of elements necessary to establish C.E. for reinforcing steel that does not meet ASTM A706, to be structurally welded. These requirements do not pertain to miscellaneous welds on reinforcing steel as defined in Section 448.4.2.1.1., "Miscellaneous Welding Applications."

Calculate C.E. using the following formula:

$$C.E. = \%C + \frac{\%Mn}{6}$$

Do not weld stainless reinforcing steel without permission from the Engineer. Provide stainless reinforcing steel suitable for welding, if required, and submit welding procedures and electrodes to the Engineer for approval.

All welding operations must be performed before any required hot-dip galvanizing.

2.6. **Welded Wire Reinforcement (WWR)**. Provide WWR conforming to ASTM A1064. Observe the relations shown in Table 2 among size number, diameter in inches, and area when ordering wire by size numbers, unless otherwise specified. Precede the size number for deformed wire with "D" and for smooth wire with "W."

Designate WWR as shown in the following example: 6 × 12 – W16 × W8 (indicating 6-in. longitudinal wire spacing and 12-in. transverse wire spacing with smooth No. 16 wire longitudinally and smooth No. 8 wire transversely).

Table 2
Wire Size Number, Diameter, and Area

Size No. (in.)	Diameter (in.)	Area (sq. in.)
31	0.628	0.310
30	0.618	0.300
28	0.597	0.280
26	0.575	0.260
24	0.553	0.240
22	0.529	0.220
20	0.505	0.200
18	0.479	0.180
16	0.451	0.160
14	0.422	0.140
12	0.391	0.120
10	0.357	0.100
8	0.319	0.080
7	0.299	0.070
6	0.276	0.060
5.5	0.265	0.055
5	0.252	0.050
4.5	0.239	0.045
4	0.226	0.040
3.5	0.211	0.035
2.9	0.192	0.029
2.5	0.178	0.025
2	0.160	0.020
1.4	0.134	0.014
1.2	0.124	0.012
0.5	0.080	0.005

Note—Size numbers (in.) are the nominal cross-sectional area of the wire in hundredths of a square inch. Fractional sizes between the sizes listed above are also available and acceptable for use.

2.7. **Welded Deformed Bar Mat Reinforcement**. Provide welded deformed bar mats in accordance with ASTM A184 except as otherwise noted in this Specification. Fabricate welded bar mats from deformed steel bars in accordance with ASTM A706 by securely connecting every intersection with a process of electrical resistance welding that employs the principle of fusion combined with pressure. The bars must be assembled by automatic machines or by other suitable mechanical means that will assure accurate spacing and alignment of all bars of the finished product

2.8. **Epoxy Coating**. Provide epoxy-coated reinforcing steel as shown on the plans. Before furnishing epoxy-coated reinforcing steel, an epoxy applicator must be pre-approved in accordance with DMS-7330, "Qualification Procedure for Reinforcing Steel Epoxy Coating Applicators." The Department's MPL includes approved applicators.

Furnish epoxy-coated reinforcing steel meeting the requirements in Table 3.

Table 3
Epoxy Coating Requirements for Reinforcing Steel

Material	Specification
Bar	ASTM A775 or A934
Wire or WWR	ASTM A884 Class A or B
Mechanical couplers	As shown on the plans
Hardware	As shown on the plans

Use epoxy coating material and coating repair material that complies with DMS-8130, "Epoxy Powder Coating for Reinforcing Steel." Patch no more than 1/4-in. total length in any foot at the applicator's plant.

Maintain identification of all reinforcing steel throughout the coating and fabrication process and until delivery to the project site.

Furnish one copy of a written certification verifying the epoxy-coated reinforcing steel meets the requirements of this Item and one copy of the manufacturer's control tests.

2.9. **Mechanical Couplers**. Use couplers of the type specified in DMS-4510, "Mechanical Couplers for Reinforcing Steel," Article 4510.6.1, "General Requirements," when mechanical splices in reinforcing steel bars are shown on the plans.

Furnish only couplers pre-qualified in accordance with DMS-4510. Ensure sleeve-wedge type couplers are not used on coated reinforcing. Sample mechanical couplers in accordance with Tex-743-I for testing before use on individual projects. Test the mechanical couplers for every project in which mechanical couplers are used in accordance with Tex-744-I. Furnish couplers only at locations shown on the plans.

Furnish couplers for stainless reinforcing steel with the same alloy designation as the reinforcing steel.

Provide hot-dip or mechanically galvanized couplers when splicing galvanized reinforcing steel or CGR.

2.10. **Fibers**. Supply fibers conforming to DMS-4550, "Fibers for Concrete," at the minimum dosage listed in the Department's MPL, when shown on the plans. Use non-metallic fibers when shown on the plans.

2.11. **Stainless Reinforcing Steel**. Provide deformed steel bars of the types shown in Table 4 and conforming to ASTM A955, Grade 60 or higher when stainless reinforcing steel is required on the plans.

Table 4
Acceptable Types of Deformed Stainless Steel Bar

Universal Numbering System designation	S31653	S31803	S24100	S32304
AISI type	316LN	2205	XM-28	2304

2.12. **Low-Carbon and Low-Chromium Reinforcing Steel**. Provide deformed steel bars conforming to ASTM A1035, Grade 100, Type CS when low carbon and low chromium reinforcing steel is required on the plans. Type CM will be permitted only if specifically allowed as shown on the plans.

2.13. **Glass-Fiber Reinforced Polymer (GFRP) Bars**. For reinforced concrete bridge decks, provide bars conforming to ASTM D7957/D7957M when GFRP bars are required on the plans. Provide GFRP bars with a minimum modulus of elasticity of 7,500 ksi when GFRP bars are required on the plans. Provide sample certification demonstrating the GFRP bar supplier has produced bar that meets the material specifications 2 mo. before fabrication. Furnish certification upon shipment that the GFRP bar supplied meets these requirements.

2.14. **Galvanized Reinforcement**. Provide galvanized reinforcing steel conforming to one of the following as shown on the plans:

- zinc-coated, hot-dip galvanized Class I or II steel reinforcement conforming to ASTM A767, Grade 60 or 80; or
- continuously hot-dip galvanized reinforcement (CGR) conforming to ASTM A1094 steel reinforcement, Grade 60 or 80.

3. CONSTRUCTION

3.1. **Bending**. Fabricate reinforcing steel bars in accordance with the CRSI *Manual of Standard Practice* to the shapes and dimensions shown on the plans. Fabricate in the shop if possible. Field-fabricate, if permitted, using an approved method. Replace improperly fabricated, damaged, or broken bars at no additional expense to the Department. Repair damaged or broken bars embedded in a previous concrete placement using an approved method.

Unless otherwise shown on the plans, the inside diameter of bar bends, in terms of the nominal bar diameter (d), must not be less than that shown in Table 5.

Table 5
Minimum Inside Diameter of Bar Bends

Bend	Bar Size No. (in.)	Diameter
Bends of 90° and greater in stirrups, ties, and other secondary bars that enclose another bar in the bend	3, 4, 5	4d[1]
	6, 7, 8	6d
Bends in main bars and in secondary bars not covered above	3–8	6d
	9, 10, 11	8d
	14, 18	10d[2]

1. For Grade 80 bars, minimum finished diameter is 5.0db.
2. Do not bend bars larger than No. 14 with grade designation of Grade 80 or higher

Bend-test representative specimens as described for smaller bars in the applicable ASTM specification where bending No. 14 or No. 18 Grade 60 bars is required. Make the required 90° bend around a pin with a diameter of 10 times the nominal diameter of the bar.

Bend stainless reinforcing steel in accordance with ASTM A955.

Do not bend hot-dip galvanized reinforcement. Only minor positioning adjustments are permitted.

Bending CGR is permitted after galvanizing.

3.2. **Tolerances**. Fabrication tolerances for bars are shown in Figure 1.

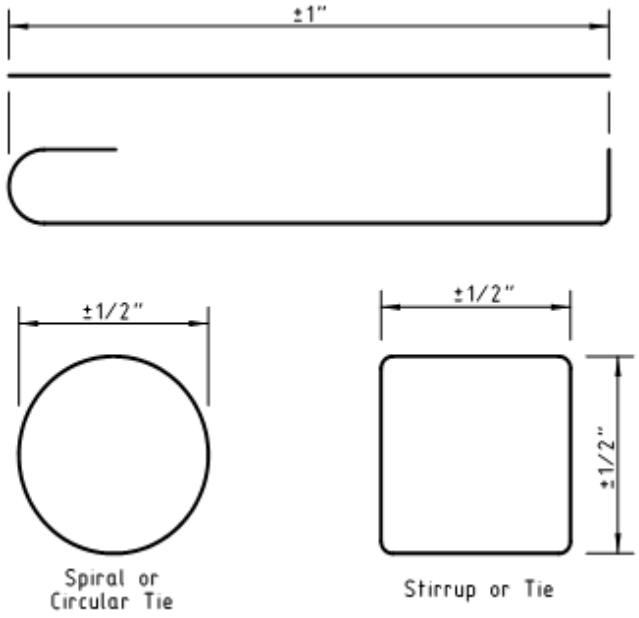

Figure 1
Fabrication Tolerances for Bars

3.3. **Storage**. Store reinforcement above the ground on platforms, skids, or other supports, and protect it from damage and deterioration. Ensure reinforcement is free of dirt, paint, grease, oil, and other foreign materials when it is placed in the work. Use reinforcement free of defects such as cracks and delaminations. Rust, surface seams, surface irregularities, or mill scale will not be cause for rejection if the minimum cross-sectional area of a hand wire-brushed specimen meets the requirements for the size of steel specified.

Do not allow stainless reinforcing steel to be in direct contact with uncoated reinforcing steel, or with galvanized reinforcing steel. This does not apply to stainless steel wires and ties. Store stainless reinforcing steel separately, off the ground on wooden supports.

3.4. **Splices**. Lap-splice, weld-splice, or mechanically splice bars as shown on the plans. Additional splices not shown on the plans will require approval. Splices not shown on the plans will be permitted in slabs no more than 15 in. in thickness, columns, walls, and parapets.

Do not splice bars less than 30 ft. in plan length unless otherwise approved. For bars exceeding 30 ft. in plan length, the distance center-to-center of splices must be at least 30 ft. minus one splice length, with no more than one individual bar length less than 10 ft. Make lap splices not shown on the plans, but otherwise permitted, in accordance with Table 6. Maintain the specified concrete cover and spacing at splices, and place the lap-spliced bars in contact, securely tied together.

Table 6
Minimum Lap Requirements for Steel Bar Sizes Through No. 11

Bar Size No. (in.)	Uncoated Lap Length	Coated Lap Length
3	1 ft. 4 in.	1 ft. 7 in.
4	1 ft. 10 in.	2 ft. 8 in.
5	2 ft. 8 in.	4 ft. 0 in.
6	3 ft. 8 in.	5 ft. 6 in.
7	4 ft. 10 in.	7 ft. 2 in.
8	6 ft. 0 in.	9 ft. 0 in.
9	7 ft. 4 in.	11 ft. 0 in.
10	8 ft. 11 in.	13 ft. 4 in.
11	10 ft. 6 in.	15 ft. 9 in.

Do not lap No. 14 or No. 18 bars.

Lap spiral steel at least one full turn.

Splice WWR using a lap length that includes the overlap of at least two cross wires plus 2 in. on each sheet or roll. Splices using bars that develop equivalent strength and are lapped in accordance with Table 6 are permitted.

Lap the existing longitudinal bars with the new bars as shown in Table 6 for box culvert extensions with less than 1 ft. of fill. Lap at least 1 ft. 0 in. for extensions with more than 1 ft. of fill.

Ensure welded splices conform to the requirements shown on the plans and Item 448, "Structural Field Welding." Field-prepare ends of reinforcing bars if they will be butt-welded. Delivered bars must be long enough to permit weld preparation.

Install mechanical coupling devices in conformance with the manufacturer's recommendations at locations shown on the plans. Protect threaded male or female connections, and ensure the threaded connections are clean when making the connection. Do not repair damaged threads.

Mechanical coupler alternate equivalent strength arrangements, to be accomplished by substituting larger bar sizes or more bars, will be considered if approved in writing before fabrication of the systems.

3.5. **Placing**. Place reinforcement as near as possible to the position shown on the plans. Do not vary bars from plan placement by more than 1/12 of the spacing between bars in the plane of the bar parallel to the nearest surface of concrete. Do not vary bars from plan placement by more than 1/4 in. in the plane of the bar perpendicular to the nearest surface of concrete. Provide a minimum 1-in. clear cover of concrete to the nearest surface of bar unless otherwise shown on the plans.

For bridge slabs, the clear cover tolerance for the top mat of reinforcement is -0, +1/2 in.

Locate the reinforcement accurately in the forms and hold it firmly in place before and during concrete placement by means of bar supports that are adequate in strength and number to prevent displacement and keep the reinforcement at the proper distance from the forms. Provide bar supports in accordance with the CRSI *Manual of Standard Practice*. Use Class 1 supports, approved plastic bar supports, precast mortar, or concrete blocks when supports are in contact with removable or stay-in-place forms. Use Class 3 supports in slab overlays on concrete panels or on existing concrete slabs. Bar supports in contact with soil or subgrade must be approved.

Use Class 1A supports with epoxy-coated reinforcing steel. Use Class 1 or Class 1A supports with CGR. Provide epoxy- or plastic-coated tie wires and clips for use with epoxy-coated reinforcing steel.

Use mortar or concrete with a minimum compressive strength of 5,000 psi for precast bar supports. Provide a suitable tie wire in each block for anchoring to the bar.

Place individual bar supports in rows at 4-ft. maximum spacing in each direction. Place continuous type bar supports at 4-ft. maximum spacing. Use continuous bar supports with permanent metal deck forms.

The exposure of the ends of longitudinals, stirrups, and spacers used to position the reinforcement in concrete pipe and storm drains is not cause for rejection.

Tie reinforcement for bridge slabs and top slabs of direct traffic culverts at all intersections, except tie only alternate intersections where spacing is less than 1 ft. in each direction. Tie the bars at enough intersections to provide a rigid cage of reinforcement for reinforcement cages for other structural members. Fasten mats of WWR securely at the ends and edges.

Clean mortar, mud, dirt, debris, oil, and other foreign material from the reinforcement before concrete placement. Do not place concrete until authorized.

Stop placement until corrective measures are taken if reinforcement is not adequately supported or tied to resist settlement, reinforcement is floating upward, truss bars are overturning, or movement is detected in any direction during concrete placement.

3.6. **Handling, Placing, and Repairing Epoxy-Coated Reinforcing Steel**.

3.6.1. **Handling**. Provide systems for handling coated reinforcing steel with padded contact areas. Pad bundling bands or use suitable banding to prevent damage to the coating. Lift bundles of coated reinforcement using a strongback, a spreader bar, multiple supports, or a platform bridge. Transport the bundled reinforcement carefully and store it on protective cribbing. Do not drop or drag the coated reinforcement.

3.6.2. **Placing**. Do not flame-cut coated reinforcement. Saw- or shear-cut only when approved. Coat cut ends in accordance with Section 440.3.6.3., “Repairing Coating.”

Do not weld or mechanically couple coated reinforcing steel except where specifically shown on the plans. Remove the epoxy coating at least 6 in. beyond the weld limits before welding and 2 in. beyond the limits of the coupler before assembly. Clean the steel of oil, grease, moisture, dirt, welding contamination (slag or acid residue), and rust to a near-white finish after welding or coupling. Check the existing epoxy for damage. Remove any damaged or loose epoxy back to sound epoxy coating.

Coat the splice area after cleaning with epoxy repair material to a thickness of 7–17 mils after curing. Apply a second application of repair material to the bar and coupler interface to ensure complete sealing of the joint.

3.6.3. **Repairing Coating**. Use material that complies with the requirements of this Item and ASTM D3963 for repairing of the coating. Make repairs in conformance with procedures recommended by the manufacturer of the epoxy coating powder. Apply at least the same coating thickness as required for the original coating for areas to be patched. Repair all visible damage to the coating.

Repair sawed and sheared ends, cuts, breaks, and other damage promptly before additional oxidation occurs. Clean areas to be repaired to ensure they are free of surface contaminants. Make repairs in the shop or field as required.

3.7. **Repair of Galvanized Reinforcing Steel**. Repair damaged galvanized surfaces in accordance with Section 445.3.4.2. “Repair Processes.”

3.8. **Handling and Placing Stainless Reinforcing Steel**. Handle, cut, and place stainless reinforcing steel bar using tools that are not used on carbon steel. Do not use carbon steel tools, chains, or slings when handling stainless steel. Use only nylon or polypropylene slings. Cut stainless steel reinforcing using shears, saws, abrasive cutoff wheels, or torches. Remove any thermal oxidation using pickling paste. Do not field bend stainless steel reinforcing without approval.

Use 16-gauge fully annealed stainless steel tie wire conforming to the material properties listed in Section 440.2.11., “Stainless Reinforcing Steel.” Support all stainless reinforcing steel on solid plastic, stainless steel, or epoxy-coated steel chairs. Do not use uncoated carbon steel chairs in contact with stainless reinforcing steel.

3.9. **Bending, Handling, Repairing, and Placing GFRP Bars**. Fabricate, handle, repair, and place GFRP bars in accordance with the AASHTO *LRFD Bridge Design Guide Specifications for GFRP-Reinforced Concrete*, Section 6, “Construction Specifications.”

4. MEASUREMENT AND PAYMENT

The work performed, materials furnished, equipment, labor, tools, and incidentals will not be measured or paid for directly, but will be subsidiary to pertinent Items.

Item 445
Galvanizing

1. DESCRIPTION

Galvanize or repair galvanizing on metal items.

2. MATERIALS

Provide galvanized metal items that meet the standards shown in Table 1.

Table 1
Galvanizing Standards

Item	Standard
Fabricated items; rolled, pressed, or forged steel shapes; plates; pipes; tubular items; and bars	ASTM A123
Steel or iron castings	ASTM A153, Class A
Bolts, nuts, screws, washers, and other miscellaneous hardware	ASTM F2329 or ASTM B695, Class 50
Miscellaneous fasteners	ASTM B633, Class Fe/Zn 8
Rail elements for metal beam guard fence or bridge railing	AASHTO M 180
Permanent metal deck forms, supporting angles, and incidental items	ASTM A653, Coating Designation G165

3. CONSTRUCTION

3.1. **General**. Provide for proper filling, venting, and draining during cleaning and galvanizing if fabricated members or assemblies are required to be hot-dip galvanized. Provide drain holes or slots as required, except where prohibited by the plans. Provide a surface finish on the thermal-cut drain holes or slots in accordance with AWS D1.1 requirements for base metal preparation. Drain to the small end of tapered sections that are assembled using slip-joint splices. Ensure cleaning and galvanizing do not produce hydrogen embrittlement.

Remove weld spatter on exposed surfaces, weld flux, weld slag, and any other weld residue or impurities before galvanizing. Before galvanizing material 1/4 in. or greater in thickness:

- remove all sharp burrs, and
- chamfer to approximately 1/16 in. all edges.

3.2. **Painting Galvanized Materials**. Provide a paint system if painting is specified on galvanized materials in accordance with DMS-8102, "Paint Systems for Galvanized Steel," unless otherwise shown on the plans. Follow all manufacturer instructions for surface preparation and application, including the following.

3.2.1. **Surface Preparation**. Do not water-quench or chromate-quench galvanized surfaces to be painted. Prepare the surface in accordance with ASTM D6386 or ASTM D7803, as applicable. Apply coating within 12 hr. of cleaning. Re-clean the surface if more than 12 hr. elapse before initial painting.

3.2.2. **Coating Application**. Ensure the coating is smooth, even, continuous, and free of drips, runs, sags, holidays, wrinkles, or other coating defects. Ensure the coating has a uniform appearance within all portions of the painted piece and all related pieces and components of a project. Ensure all repairs are smooth, even, and visually match the remainder of the coated piece by use of feathering and other appropriate techniques to avoid sharp transitions.

3.3. **Workmanship**.

3.3.1. **Coverage**. Bare spots no more than 1/8 in. across are acceptable unless numerous. Repair larger bare spots in accordance with Section 445.3.4., "Repairs." Local runs or drips of zinc coating are acceptable unless they interfere with the intended use of the product. Carefully remove plainly visible excessive zinc accumulations.

3.3.2. **Adhesion**. Tap the coated area using a small hammer to test coating adhesion. The coating is acceptable if it is not brittle and does not scale or flake.

3.3.3. **Appearance**.

3.3.3.1. **White Rust**. A white powdery residue indicates moisture. Remove heavy layers of white rust that have caused the coating to pit. Light coatings may remain unless the Engineer requires chemical removal. Remove white rust from articles that will be in direct contact with soil.

3.3.3.2. **Red Rust**. Red rust on galvanized items indicates uncoated areas. Refer to Section 445.3.3.1., "Coverage," for acceptance criteria.

3.3.3.3. **Alligator Cracking or Spider Webbing**. The composition of the base metal may cause dark lines resembling alligator skin. Refer to Section 445.3.3.2., "Adhesion," to determine whether the coating is acceptable.

3.3.3.4. **Dull Gray Coating**. The composition of the base metal can cause a dull gray color. Refer to Section 445.3.3.2., "Adhesion," to determine whether the coating is acceptable.

3.3.4. **Coating Thickness**. Galvanize to the thickness specified. Use Tex-728-I to determine coating thickness.

3.4. **Repairs**. Use zinc-based solders, sprayed zinc, or zinc-rich paints for repairs in accordance with this Section.

3.4.1. **Materials**.

3.4.1.1. **Zinc-Based Solders**. Solders used in rod form or as powders:

- zinc-tin-lead alloys with liquidus temperatures in the range of 446–500°F, or
- zinc-cadmium alloys with liquidus temperatures in the range of 518–527°F.

3.4.1.2. **Sprayed Zinc (Metallizing)**. Zinc coating applied by spraying with droplets of molten metal using wire, ribbon, or powder processes.

3.4.1.3. **Organic Zinc-Rich Paints**. Zinc-rich paints based on organic binders that meet the requirements of DMS-8103, "Galvanizing Repair Paints." The Department's MPL has a list of approved repair paints for galvanized coatings.

3.4.2. **Repair Processes**.

3.4.2.1. **Zinc-Based Solders**. Remove moisture, oil, grease, dirt, corrosion products, and welding slag or flux from surfaces to be repaired. Clean surface to white metal by wire-brushing, light grinding, or mild blasting extending into the surrounding undamaged galvanized coating. Preheat cleaned areas to at least 600°F, but not more than 750°F. Wire-brush while heating and evenly distribute a layer of zinc solder. Flush the repaired area with water or wipe with a damp cloth to remove flux residue when repair is completed.

3.4.2.2. **Sprayed Zinc (Metallizing)**. Remove oil, grease, corrosion products, and any welding slag or flux from surfaces to be repaired, and ensure the surfaces are dry. Clean surface to white metal by wire-brushing, light grinding, or mild blasting extending into the surrounding undamaged galvanized coating. Apply coating by metal-spraying pistols fed with either zinc wire, ribbon, or powder. Provide a coating that is uniform and free of lumps, coarse areas, or loose particles.

3.4.2.3. **Organic Zinc-Rich Paints**. Remove oil, grease, corrosion products, and welding slag or flux from surfaces to be repaired, and ensure the surfaces are clean and dry. Clean surface to near-white metal by wire-brushing, light grinding, or mild blasting extending into the surrounding undamaged coating to provide a smooth repair. Spray or brush-apply the paint to the prepared area in conformance with the paint manufacturer's instructions to attain the required dry-film thickness. Provide multiple passes when using spray application.

3.5. **Repair Coating Thickness**. Measure thickness in the repaired area in accordance with Tex-728-I after completing repair and cooling or curing. The minimum thickness required is the same as that required for the specified galvanizing. However, if the repair uses zinc-rich paints, the minimum coating thickness is 50% higher than the specified galvanizing thickness but not greater than 4.0 mils.

4. MEASUREMENT AND PAYMENT

The work performed, materials furnished, equipment, labor, tools, and incidentals will not be measured or paid for directly, but will be subsidiary to pertinent Items.

Item 447
Structural Bolting

1. DESCRIPTION

Furnish and install high-strength bolts for structural connections.

2. MATERIALS

2.1. **General**. Use the same supplier for bolts and nuts to ensure proper fit. Have the manufacturer or distributor perform rotational-capacity (R-C) tests in accordance with Tex-452-A on all bolt, nut, and washer assemblies. Test each combination of bolt production lot, nut lot, and washer lot as an assembly and assign an R-C lot number to each lot tested. Test two samples from each assigned R-C lot.

Furnish a manufacturer's certified test report (MCTR) or a distributor's certified test report (DCTR) for each R-C lot supplied. Include in the MCTR or DCTR:

- results of the R-C tests,
- R-C lot number,
- manufacturing location for assembly components,
- date and location of tests, and
- a statement that the materials represented by the test report are in accordance with the specifications.

2.2. **Bolt Assemblies**. Provide ASTM F3125 bolts, nuts, and washers meeting the type, grade, and finish requirements shown in Table 1, unless otherwise shown on the plans.

Use Grade A325 or Grade A490 Type 3 plain (uncoated) bolts for weathering steel as specified and Grade A325 Type 1 galvanized bolts for coated steel, unless otherwise shown on the plans.

Provide bolts long enough for the installed bolt end to be flush with or outside the face of the nut.

Ensure galvanized nuts are lubricated with a lubricant containing a dye of a color that contrasts with the color of the galvanizing. Order ASTM A563 nuts with supplemental requirement S2 if they will be galvanized.

Table 1
ASTM Type, Finish, and Grade for Structural Bolts, Nuts, and Washers

	ASTM Designation	Bolt Type	Bolt Finish	ASTM A563 Nut Grade and Finish	ASTM F436 Washer Type and Finish
Heavy-hex holts[1]	A325	1	Galvanized	DH[2], galvanized and lubricated	1; galvanized
	A325	3	Plain	C3 and DH3; plain and lubricated	3; plain
	A490	3	Plain	DH3; plain and lubricated	3; plain
Tension-control colts[1]	F1852	1	Galvanized	DH,[2] galvanized and lubricated	1; galvanized
	F1852	3	Plain	C3 and DH3; plain and lubricated	3; plain
	F2280	3	Plain	DH3; plain and lubricated	3; plain

1. ASTM F3125 high strength structural bolts
2. ASTM A194 heavy hex Grade 2H nuts may be substituted.

2.3. **Washer-Type Indicating Devices**. Use compressible-washer type direct-tension indicators that meet ASTM F959 if allowed. Alternative washer-type indicating devices must be approved. Provide detailed testing, installation, and inspection requirements prepared by the manufacturer.

2.4. **Storage**. Protect all bolts and nuts from dirt and moisture at the jobsite. Remove from protected storage only those bolts and nuts anticipated to be installed during a workday. Return unused fasteners to protected storage at the end of the day. Do not clean fasteners of lubricant present in the as-delivered condition. Perform a field R-C test at the Contractor's expense in accordance with Tex-452-A on any lot of fasteners that shows signs of rust, dirt, or loss of lubrication as directed. Apply additional lubrication and rerun the R-C test before installing bolts if the fasteners fail the R-C test. Replace any fasteners that cannot be re-lubricated to pass the field R-C test. Tension control bolts may be re-lubricated only by the manufacturer.

2.5. **Sampling and Testing**. Sample high-strength bolts, nuts, and washers in accordance with Tex-719-I, when directed. Perform field R-C tests as directed in accordance with Tex-452-A. Perform installation verification tests in accordance with Section 447.4.1., "Verification Testing."

2.6. **Fitup Bolts and Erection Pins**. Provide heavy-hex fitup bolts of the same diameter as the connection bolts. Do not use washer-type indicating devices for fitups. Do not reuse galvanized bolts or Grade A490 bolts that have been used as fitup bolts. Provide enough erection or drift pins, 1/32 in. larger than the bolt diameter.

2.7. **Paint Markers**. Provide white or yellow paint markers for marking bolts or nuts for wrench calibration, R-C tests, and bolt installation.

3. EQUIPMENT

3.1. **Testing Equipment**. Provide a calibrated tension-measuring device (Skidmore-Wilhelm or equivalent), calibrated torque wrench, and other accessories necessary to perform the installation verification test and the R-C test, and to calibrate hydraulic or electric torque wrenches.

3.2. **Wrenches**. Furnish either of the following types of wrenches.

3.2.1. **Air-Driven Impact Wrenches**. Furnish air-driven impact wrenches, air compressors, and related accessories of enough capacity to properly tension high-strength bolts. Impact wrenches should be of enough size and capacity to be able to tension fully a bolt in less than 15 sec. Repair or replace any wrenches that are unable to apply full tension to a bolt within this time.

3.2.2. **Calibrated Torque Wrenches**. Furnish calibrated hydraulic or electric torque wrench and related accessories capable of properly tensioning high-strength bolts. Calibrate the wrench to stall out or cut out completely when the bolt tension reaches 1.05 times the tension shown in Table 2. Calibrate the wrench by tensioning three bolts of each size in a calibrated tension-measuring device (Skidmore-Wilhelm or equivalent). Mark each bolt and verify the rotation from snug-tight when calibrating the wrench in accordance with Section 447.4.5.3.1., "Turn-of-the-Nut Method." Calibrate the wrench at least once each working day or as directed. Recalibrate the wrench for changes in bolt diameter; changes in bolt length greater than two bolt diameters; significant differences in the surface condition of the bolts, threads, nuts, or washers; or changes in the equipment or hose length.

4. CONSTRUCTION

4.1. **Verification Testing**. Have each member of the bolting crew that will perform the actual work complete an acceptable pre-installation verification test in the presence of the Engineer. Only crewmembers that have demonstrated proper workmanship by verification testing may perform production bolting work.

4.1.1. **Air-Driven Impact Wrench**. Perform an installation verification test on three complete fastener assemblies of each combination of diameter, length, grade, and lot to be installed before beginning bolting. Follow the bolt-tensioning procedures in accordance with Section 447.4.5.3., "Tension Bolts." Use a calibrated tension-measuring device (Skidmore-Wilhelm or equivalent) to verify and demonstrate that the method for

estimating the snug-tight condition and controlling the turns from snug-tight develops a tension greater than 1.05 times the tension shown in Table 2. The snug-tight condition is defined as the tightness that exists when the plies of the joint are in firm contact.

4.1.2. **Calibrated Torque Wrench**. Calibrate the wrench before beginning bolting in accordance with Section 447.3.2.2., "Calibrated Torque Wrenches." Use the bolting crew that will perform the actual work for the calibration and calibrate the wrench in the presence of the Engineer. Follow the bolt-tensioning procedures in accordance with Section 447.4.5.3., "Tension Bolts."

4.1.3. **Direct-Tension Indicator**. Use a calibrated tension-measuring device for compression-type indicators to verify the gap is not less than 0.015 in. or the job inspection gap specified by the manufacturer when tension in the bolt reaches 1.05 times the tension shown in Table 2.

Follow the manufacturer's instructions for pre-installation verification testing methods and frequency for alternative washer type indicating devices deemed acceptable.

4.2. **Workmanship**. The Engineer will disqualify any crewmembers not adhering to proper installation methods during production work. Disqualified crew may not perform further bolting work until they complete an additional pre-installation verification test suitable to the Engineer.

4.3. **General**. Ensure all material within the grip of the bolt is steel. Do not allow any compressible material such as gaskets or insulation within the grip. Ensure the slope of parts in contact with the bolt head or nut does not exceed 1:20 with respect to a plane normal to the bolt axis. Prepare all joint surfaces, including those in contact with the bolt heads, nuts, or washers, so that the surfaces are free of dirt, loose rust, loose mill scale, burrs, and other matter that would prevent solid seating of the parts.

Replace any bolts and nuts installed for shipping purposes unless the shop drawings specify the shop-installed bolts are to be fully tensioned in the shop. Do not tension bolts that have been installed snug-tight in the shop. Remove any bolts installed snug-tight in the shop and replace them with new bolts. Inspect and prepare the joint surfaces after removing shop-installed bolts that are not fully tensioned in the shop.

Provide a hardened washer for heavy-hex and tension-control bolts under either the nut or the bolt head, whichever is turned during tensioning. Install hardened washers under both the nut and bolt head of Grade A490 bolts when the outer plies being fastened have a yield strength less than 40 ksi.

Install an ASTM F436 washer for direct-tension indicators as follows:

- under the nut when the nut is turned and the direct-tension indicator is located under the bolt head,
- between the nut and the direct-tension indicator when the nut is turned and the direct-tension indicator is located under the nut,
- under the bolt head when the bolt head is turned and the direct-tension indicator is located under the nut, and
- between the bolt head and the direct-tension indicator when the bolt head is turned and the direct-tension indicator is located under the bolt head.

Tension all bolts to provide the minimum bolt tension values shown in Table 2.

Erect steel in accordance with Item 441, "Steel Structures." Do not tack-weld any parts to eliminate fitup bolts or to hold parts together while bolting.

Remove lubricant from bolt assemblies on painted structures after tensioning and before coating the connections.

Re-tighten the nuts or tack weld the nuts to the bolts when bolts are used to temporarily support welded diaphragms after completing the welding operations if the diaphragms are over vehicular or pedestrian traffic.

Table 2
Bolt Tension

Nominal Bolt Size, in.	Minimum Tension (kips)	
	Grade A325 Bolts	Grade A490 Bolts
1/2	12	15
5/8	19	24
3/4	28	35
7/8	39	49
1	51	64
1-1/8	64	80
1-1/4	81	102
1-3/8	97	121
1-1/2	118	148

4.4. **Preparation of Faying Surfaces**. Perform blast cleaning or painting of faying surfaces in accordance with Item 441. Provide an AMPP-SP 10 blast cleaning before shipment for weathering steel. Do not wire-brush weathering steel faying surfaces.

4.5. **Bolt Installation**. Use the following procedure for bolt installation of a complete connection.

4.5.1. **Fair-Up Holes**. Use a minimum number of erection or drift pins, as directed, in the holes to “fair-up” all holes.

4.5.2. **Install Bolts**. Install bolts in all remaining holes of the connection. Do not use excessive force, which could result in damage to the threads, to install the bolts. Increase the number of erection or drift pins as necessary to align the holes if force is required to install the bolts. Do not ream the holes unless approved. Ream the holes in accordance with Section 441.3.11.5., “Misfits,” if approved. Remove the erection or drift pins and install bolts in these holes. Bring the connection to a full snug-tight condition by snugging systematically from the most rigid part of the connection to the free edges. The snug-tight condition is defined as the tightness that exists when the plies of the joint are in firm, full contact and all of the bolts in the joint have been tightened enough to prevent the removal of the nuts without the use of a wrench. A snug-tight condition can usually be attained by a few impacts of an impact wrench or the full effort of a worker using an ordinary spud wrench, as demonstrated in the installation verification test. As necessary, re-snug previously snugged bolts that may have relaxed due to the subsequent snugging of adjacent bolts to ensure all bolts are simultaneously snug-tight and the connection plates are in full contact.

Fully tighten a minimum number of bolts as directed until the plies are in full contact if snugging does not bring the plies of the joint into full contact. Mark these bolts as fitup bolts. Use a non-galvanized Grade A325 bolt of the same diameter as a fitup bolt in connections requiring the use of galvanized Grade A325 bolts. Re-snug all remaining bolts.

Do not use washer-type indicating devices to bring the connection to a snug-tight condition. Rather, install heavy-hex bolt assemblies in enough holes (approximately 20%) to attain firm, full contact between plies. Remove the heavy-hex bolts and install the washer-type indicating device assemblies after firm contact is established by connections in surrounding bolt holes.

4.5.3. **Tension Bolts**. Loosen all fitup bolts after tensioning all the other bolts in the connection. Ungalvanized Grade A325 bolts used as fitup bolts may be reused in a connection using this type of bolt. Replace all galvanized bolts and Grade A490 bolts used as fitup bolts. Tension these remaining untensioned bolts in accordance with this Section. Ensure the element not turned by the wrench (bolt head or nut) does not rotate.

4.5.3.1. **Turn-of-the-Nut Method**. Match-mark the nuts and the protruding bolt ends after the bolts have been brought up to snug-tight condition and before final tensioning so that actual rotation can be determined. Tension all bolts in the connection to their final tension by the amount of rotation shown in Table 3. Start final tensioning at the center or most rigid part of the connection and progress toward the free edges.

4.5.3.2. **Calibrated Wrench Method**. Use a calibrated hydraulic torque wrench to tension all bolts to 1.05 times the tension shown in Table 2 after they have been brought to the snug-tight condition. Calibrate the wrench in accordance with Section 447.3.2.2., "Calibrated Torque Wrenches." Start tensioning at the most rigid part of the connection and proceed to the free edges. Return the wrench to re-tension previously tensioned bolts that may have relaxed due to the subsequent tensioning of adjacent bolts. Place marks on the socket at one-third points so the amount of rotation can be visually determined.

4.5.3.3. **Washer-Type Indicating Devices**.

4.5.3.3.1. **Compressible-Washer Type, Direct-Tension Indicators**. Ensure the direct-tension indicator arches are oriented away from the work and that they bear against the hardened bearing surface. Confirm the appropriate feeler gauge is accepted in at least half the spaces between protrusions before tensioning and refused entry in at least half the spaces between protrusions after tensioning.

4.5.3.3.2. **Alternative Washer Type Indicating Devices**. Follow the procedures prepared by the manufacturer and approved. Verify proper installation after tensioning.

4.5.4. **Bolt Reuse**. Do not reuse Grade A490 or galvanized Grade A325 bolts. Ungalvanized Grade A325 bolts may be reused once if the threads have not been damaged. Re-tensioning previously tensioned bolts loosened by the tensioning of adjacent bolts is not considered to be reuse.

Tension all bolts in a connection within 10 days of installation. Bolts not tensioned within 10 days of installation are subject to field R-C testing. Re-lubricate or replace any installed bolts that do not have enough lubrication as determined by the field R-C test.

Table 3
Nut Rotation from Snug-Tight Condition[1]

Bolt Length (underside of head to end of bolt)	Disposition of Outer Face of Bolted Parts		
	Both Faces Normal to Bolt Axis	One Face Normal to Bolt Axis and Other Face Sloped Less than 1:20 (beveled washer not used)	Both Faces Sloped Less than 1:20 from Bolt Axis (beveled washer not used)
Up to and including 4 bolt diameters	1/3 turn	1/2 turn	2/3 turn
Over 4 bolt diameters up to and including 8 diameters	1/2 turn	2/3 turn	5/6 turn
Over 8 bolt diameters up to and including 12 diameters[2]	2/3 turn	5/6 turn	1 turn

1. Nut rotation is relative regardless of the element (nut or bolt) being turned. The tolerance is –0°, +30° for bolts installed by 1/2 turn or less and –0°, +45° for bolts installed by 2/3 turn or more.
2. Determine the required rotation for bolt lengths greater than 12 diameters using the installation verification test in a simulated connection of solidly fitted steel.

5. MEASUREMENT AND PAYMENT

Installation and testing of bolts will not be paid for directly, but will be subsidiary to pertinent Items requiring the use of high-strength bolts.

When payment for the structure associated with the bolts is made under Item 442, "Metal for Structures," bolts, nuts, and washers will be paid for in accordance with Item 442.

Item 449
Anchor Bolts

1. DESCRIPTION

Fabricate and install anchor bolts to be embedded in or attached to concrete. Anchor bolts are also referred to as anchor rods.

2. MATERIALS

2.1. **Bolts and Nuts**. Provide bolts and nuts that meet the standards shown in Table 1.

Table 1
Bolt and Nut Standards

Specified Anchor Bolt Category	Bolt Standards	Nut Standards
Mild steel	ASTM A307 Grade A, F1554 Grade 36, or A36	ASTM A563
Medium-strength, mild steel	ASTM F1554 Grade 55 with supplementary requirement S1	ASTM A194 Grade 2 or A563 Grade D or better
High-strength steel	ASTM F3125 Grade A325 or ASTM A449[1]	ASTM A194 or ASTM A563, heavy hex
Alloy steel	ASTM A193 Grade B7 or ASTM F1554 Grade 105	ASTM A194 Grade 2H or ASTM A563 Grade DH, heavy hex

1. If headed bolts are specified, ASTM A449 bolts must be heavy hex head.

Provide a mill test report or manufacturer's certification indicating the material conforms to these requirements. For alloy steel anchor bolts, provide a test report or certification attesting to the heat-treating process if applicable. If no specific bolt category is shown on the plans, provide mild steel anchor bolts and nuts that meet the standards shown in Table 1.

2.2. **Washers**. Use washers that meet ASTM F436.

2.3. **Threads**. Provide anchor bolts with rolled or cut threads of UNC or 8UN series in accordance with ASME B1.1. Anchor bolts 1 in. in diameter and smaller and 1-3/4 in. in diameter and larger must have UNC series threads. If bolts have rolled threads, ensure the diameter of the unthreaded portion of bolts with rolled threads is at least the minimum pitch diameter and no greater than the maximum major diameter of the threads. If bolts have cut threads, ensure the diameter of the unthreaded portion is at least the minimum major diameter of the threads. Ensure all threads for bolts and nuts have Class 2 fit tolerances in accordance with ASME B1.1.

3. CONSTRUCTION

3.1. **Fabrication**. Welded splicing of anchor bolts is not permitted.

Provide an anchorage device with each anchor bolt consisting of a standard bolt head, a threaded bolt with nuts, or, if shown on the plans, a 90° bend. Make the inside-bend diameter approximately two times the anchor bolt diameter, but at no point along the bend greater than three times the bolt diameter. Hot bending is permissible provided the temperature does not exceed 1,100°F.

When embedded templates are not specified and nuts are welded to the end of anchor bolts for anchorage, weld only on the nut face at the unstressed end of the bolt. Ensure no welding, arc, or other potential notch-producing effects occur in the stressed portion of the bolt.

Shipping of the anchor bolt cage in its assembled condition is not required.

3.2. **Finish**. Hot dip galvanize in accordance with Item 445, "Galvanizing."

3.2.1. **Anchor Bolts Embedded in Concrete**. Galvanize the exposed end of the thread length plus a minimum of 6 in. unless otherwise shown on the plans.

3.2.2. **Anchor Bolts Extending Through Concrete**. Galvanize the complete length of the bolt.

3.2.3. **Nuts**. Galvanize exposed nuts. Galvanize the untapped blanks before cutting the threads.

3.2.4. **Washers**. Galvanize exposed washers.

3.3. **Installation**. Hold the anchor bolt and template assembly rigidly in position during concrete placement. Use wood templates or other positive means to ensure correct positioning of anchor bolts not requiring steel templates. Positioning devices may be tack welded to the steel templates but not to any portion of the anchor bolts.

3.3.1. **Anchor Bolt Thread Lubricant Coating**. Coat anchor bolt threads before installing nuts using an electrically conducting lubricant compound described in Section 449.3.3.2.1., "Definitions," for traffic signal poles, roadway illumination poles, high mast illumination poles, intelligent transportation system (ITS) poles, steel electrical service supports, and overhead sign support structures. Coat anchor bolt threads for other structures with pipe joint compound or beeswax. After installing nuts, repair galvanizing damage on bolts, nuts, and washers in accordance with Section 445.3.4., "Repairs."

3.3.2. **Anchor Bolt Tightening Procedure**. Tighten anchor bolts for traffic signal poles, shoe base and concrete traffic barrier base roadway illumination poles, high mast illumination poles, ITS poles, steel electrical service supports, and overhead sign support structures in accordance with this Section. This procedure covers the tightening of nuts on a double-nut anchor bolt system using anchor bolts with 55-ksi or 105-ksi minimum yield strength and UNC or 8UN thread series to secure structures to drilled shaft foundations.

3.3.2.1. **Definitions**. The following definitions apply to the anchor bolt tightening procedure.

- **Double-Nut Anchor Bolt System**. An anchor bolt with two nuts that sandwich the structure's base plate. The bottom nut is positioned under the base plate to level, support, and provide the reaction for the force applied by tightening the top nut positioned above the base plate.
- **Electrically Conducting Lubricant**. A compound commonly used in the electrical industry to coat threads of field-cut rigid metal conduit and suitable for exposure to weather.
- **Impact Tightening**. The tightening of nuts using a box-end "slug" or "knocker" wrench and a sledgehammer. The wrench, matching the size of the nut to be tightened, is driven with the sledgehammer to rotate the nut.
- **Static Tightening**. The tightening of nuts using a "spud" wrench and a pipe or extension handle. The wrench, matching the size of the nut to be tightened, may be turned using more than one worker to rotate the nut.
- **Snug-Tight**. The condition when the nut is in full contact with the base plate. It may be assumed the full effort of a worker on a 12-in. wrench results in a snug-tight condition.
- **Turn-of-the-Nut Method**. The tightening of top nuts to snug-tight condition, then establishing reference positions by marking one flat on each nut with a corresponding reference mark on the base plate at each bolt. Each nut is then turned to the prescribed rotation from the referenced snug-tight position.

3.3.2.2. **Anchor Bolt Tightening**. Perform the following procedure.

- Coat the threads of the anchor bolts with electrically conducting lubricant.
- Install the bottom nuts on the bolts, one on each bolt.

- Level the top template (using it as a guide) by adjusting the bottom nuts so the template rests on each nut and the distance between the top of the concrete shaft and the bottom surface of the bottom nut is approximately 1/2 in.
- Remove the template.
- Coat the bearing surfaces of the bottom nuts and washers with electrically conducting lubricant.
- Install bottom washers on bolts, one on each bolt.
- Erect and plumb the structure as specified. Adjust the bottom nuts so each is bearing equally on the washer or base plate. The truss for cantilever overhead sign support structures and the mast arm for traffic signal poles must be removed during anchor bolt tightening.
- With the plumbed structure supported by a crane, coat the bearing surfaces of the top nuts and washers with electrically conducting lubricant. Install one washer and one top nut on each bolt. Turn the top nuts onto the bolts so each is hand-tight against the washer or base plate.
- Turn each bottom nut to a snug-tight condition using a wrench.
- Verify the structure is still plumb and still supported by the crane. Begin turn-of-the-nut method by turning each top nut down to the same snug-tight condition. Prevent rotation of the bottom leveling nut during all top nut tightening. Establish reference marks for turn-of-the-nut method once snug-tight condition is achieved, and then tighten the top nuts by turning each nut 1/12 turn (1/2 of a nut flat) past snug-tight using either static or impact tightening. Turn each top nut an additional 1/12 turn until each nut has been tightened 1/6 total turn past snug-tight.

4. MEASUREMENT AND PAYMENT

Top or bottom templates, washers, lock washers, nuts, lock nuts, and other devices used for installing anchor bolts are considered part of the anchor bolt assembly. All work performed, materials furnished, equipment, labor, tools, and incidentals will not be measured or paid for directly, but will be subsidiary to pertinent Items.

Item 450
Railing

1. DESCRIPTION

Construct railing of concrete, steel, aluminum, or a combination of these materials, including necessary anchorage for the railing on bridges, culverts, walls, or other structures as shown on the plans.

2. MATERIALS

Use materials that conform to requirements of the following Items.

- Item 421, “Hydraulic Cement Concrete”
- Item 440, “Reinforcement for Concrete”
- Item 441, “Steel Structures”
- Item 442, “Metal for Structures”
- Item 445, “Galvanizing”
- Item 540, “Metal Beam Guard Fence”

Provide an approved Type III, Class C epoxy or an epoxy of the type and class shown on the plans where epoxy anchors are allowed or required for installing drilled and epoxied rail anchorage reinforcement or rail anchor bolts in accordance with DMS-6100, “Epoxies and Adhesives.” Use other materials if shown on the plans. Provide only dual-cartridge epoxy systems mixed with a static mixing nozzle supplied by the epoxy adhesive manufacturer and dispensed using a tool supplied by the epoxy adhesive manufacturer. Do not use bulk epoxies. Drill and install anchorage reinforcement or anchor bolts to the embedment depth shown on the plans or the depth the manufacturer recommends, whichever is deeper. No additional payment will be made for providing embedment deeper than shown on the plans. Select an embedment depth capable of developing the yield strength of the steel anchor based on the product literature for the epoxy and steel anchor being used if no resistance or embedment depth is shown on the plans. Use 60 ksi as the yield strength for reinforcing steel.

3. CONSTRUCTION

Construct railing in compliance with details, alignment, and grade shown on the plans. Do not place railing until falsework or formwork, if any, for the span has been released unless otherwise directed. Adhere to the schedule restrictions for placing bridge rails and opening to construction traffic in accordance with Item 422, “Concrete Superstructures.” Notify the Engineer after completion of the following steps and obtain approval of work before proceeding to the next step: placing rail reinforcement and pre-pour clear cover checks.

Ensure expansion joints in the railing will function properly before placing concrete.

Furnish either steel or aluminum, but not both, for the entire Contract if the plans allow either steel or aluminum options for a particular railing type.

Install epoxy adhesive anchorages in conformance with the manufacturer’s instructions, including hole size, drilling equipment and method, hole cleaning equipment and method, mixing and dispensing epoxy, and anchor insertion. Do not alter the manufacturer’s mixing nozzle or dispenser. Anchorage bars or bolts must be clean and free of grease, oil, or any other foreign material. Demonstrate hole cleaning method to the Engineer for approval and continue the approved process for all anchorage locations. Do not weld to an anchor bar or anchor bolt that is anchored with epoxy adhesive. Do not expose rail to traffic until epoxy adhesive has obtained full cure in conformance with manufacturer’s specifications.

3.1. **Metal Railing**.

3.1.1. **General**. Furnish metal beam rail elements in accordance with Item 540.

Fabricate and erect metal railing in accordance with the pertinent provisions of Item 441 and this Item.

Prepare and submit for approval the required shop or erection drawings in accordance with Item 441 when shown on the plans. Show all splice locations and details on the shop or erection drawings. Splice members only as shown on the plans.

Field-weld when required in accordance with Item 448, "Structural Field Welding."

3.1.2. **Fabrication**. Fabrication plants that produce metal railing (steel and aluminum) must be approved in accordance with DMS-7395, "Metal Railing Fabrication Plant Qualification." This required approval does not include fabricators of chain link fence. The Department maintains an MPL of approved fabrication plants of metal railing.

Permanently mark each metal railing post base plate, at a visible location when erected, with the fabrication plant's insignia or trademark. For fabricated rail panels, provide this permanent mark on one post base plate per panel.

Fabricate metal railing and post panels in sections conforming to the details shown on the plans and field-verified lines and grades. Fabricate adjacent sections so they will accurately engage each other in the field. Match-mark each pair of sections so they can be erected in the same position in which they were fabricated.

Fabricate metal rail elements included as part of the railing system to the dimensions and cross-sections shown on the plans and within a tolerance of 1/4 in. per 10 ft. in the straightness of either edge. Connect metal rail elements to the rail posts as shown on the plans, lapping metal rail elements in the direction of traffic in the adjacent lane. Bolts and nuts for metal railing should meet requirements of ASTM A307 and be galvanized in accordance with Item 445, unless otherwise shown on the plans.

Fabricate stainless steel railing in accordance with AWS D1.3. Fabricate aluminum railing in accordance with AWS D1.2.

When required, heat aluminum materials to a temperature up to 400°F for no more than 30 min. to facilitate bending or straightening.

3.1.3. **Corrosion Protection**. Galvanize all portions of steel railing after fabrication in accordance with Item 445, unless otherwise shown on the plans. Apply appearance coat to galvanized surface in accordance with Item 445 when shown on the plans. Repair any damage to galvanized or painted surfaces after erection in accordance with Item 445 and Item 446, "Field Cleaning and Painting Steel," respectively.

Before final acceptance, clean surfaces of aluminum and galvanized steel railing not shown to be painted to remove extrusion marks, grease, dirt, and all other surface contaminants.

3.1.4. **Storage and Shipping**. Store railing materials above the ground on platforms, skids, or other supports, and keep them free of grease, dirt, and contact with dissimilar metals. Avoid scratching, marring, denting, discoloring, or otherwise damaging the railing. Properly ship railing materials in a manner to avoid damage.

3.2. **Concrete Railing**. Provide concrete portions of railing in accordance with the requirements of Item 420, "Concrete Substructures," and Item 422, "Concrete Superstructures." Construct forms so the railing line and grade can be checked after the concrete has been placed but before initial set. Do not disturb the form alignment during finish floating of the railing tops. Exercise particular care in other construction to avoid disturbing or vibrating the span with the newly placed railing.

Provide precast members conforming to Item 424, "Precast Concrete Structural Members (Fabrication)."

Slipform construction of railing is permitted unless otherwise shown on the plans. Demonstrate slipforming method showing line and grade of concrete surfaces can be consistently obtained and clear cover outside reinforcing steel be maintained at all times. Stop slipforming railing if specified concrete clear cover is not obtained or appearance of rail is off line and grade.

Do not slipform railing with cast-in-place anchor bolts unless noted otherwise.

Provide additional reinforcing as needed to prevent movement of the reinforcement cage. Clear cover and epoxy coating requirements for additional reinforcement are the same as those shown for the rail reinforcement. The rail reinforcing cage may be tack welded to the rail anchorage reinforcement provided the rail and anchorage reinforcement are not epoxy-coated and weld locations measured along the rail are no closer than 3 ft. Tie all bar intersections if epoxy-coated reinforcement is required for the railing proposed to be slipformed. Provide a wire line to maintain vertical and horizontal alignment of the slipform machine. Attach a grade line gauge or pointer to the machine so a continuous comparison can be made between the rail being placed and the established grade line. Rails or supports at the required grade are allowed instead of sensor controls. Make one or more passes with the slipform over the rail segment to ensure proper operation and maintenance of grades and clearances before placing concrete. Provide slipformed rail within a vertical and horizontal alignment tolerance of ±1/4 in. per 10 ft. Construct rail with a smooth and uniform appearance. Consolidate concrete so it is free of honeycomb. Provide concrete with a consistency that will maintain the shape of the rail without support. Minimize starting and stopping of the slipform operation by ensuring a continuous supply of concrete.

Do not exceed the manufacturer's recommended speed for the slipform machine. Stop slipforming and take remedial action if slipforming causes movement of the reinforcement such that plan clearances are not achieved. Remove and replace unsatisfactory slipformed rail at the Contractor's expense.

3.3. **Tests**. Metal beam rail elements may be sampled in accordance with Tex-713-I. The Engineer may sample bolts and nuts in accordance with Tex-708-I for galvanized coating testing.

The Engineer will select five anchor bars or bolts from the first day's production to be tested after the epoxy has cured. Test the bars or bolts in the presence of the Engineer in accordance with ASTM E1512, using a restrained test, to evaluate the epoxy adhesive's bond strength. Verify the anchor bars or bolts develop the required pullout resistance on the plans or 75% of the yield strength of the bars or bolts, whichever is less, without a bond failure of the epoxy. The Engineer may require additional tests during production. Perform corrective measures to provide adequate capacity if any of the tests do not meet the required test load. Repair damage from testing.

4. MEASUREMENT

This Item will be measured by the foot.

This is a plans quantity measurement Item. The quantity to be paid is the quantity shown in the proposal, unless modified by Article 9.2., "Plans Quantity Measurement." Additional measurements or calculations will be made if adjustments of quantities are required.

5. PAYMENT

The work performed and materials furnished in accordance with this Item and measured as provided under "Measurement" will be paid for at the unit price bid for "Railing" of the type specified. This price is full compensation for furnishing, preparing, and placing concrete, expansion joint material, reinforcing steel, structural steel, aluminum, cast steel, pipe, anchor bolts or bars, testing of epoxy anchors, and all other materials required in the finished railing; removal and disposal of salvageable materials; and hardware, paint and painting of metal railing, galvanizing, equipment, labor, tools, and incidentals.

Item 454
Bridge Expansion Joints

1. DESCRIPTION

Furnish and install bridge expansion joints.

2. MATERIALS

Provide materials in accordance with the requirements of the following Items.

- Item 442, “Metal for Structures”
- DMS-6140, “Polymer Concrete for Bridge Joint Systems”
- DMS-6310, “Joint Sealants and Fillers”
- ASTM D5973

Use primers recommended by the manufacturer of the sealant when required. Provide backer rods that are circular and are 25% larger than the joint opening. Use backer rods compatible with the sealant that do not react with or bond to the sealant.

3. CONSTRUCTION

Place expansion joints to conform to the finished grade of the roadway surface. Set the joint opening at the dimension shown on the plans for 70°F, adjusted for the temperature at the time of installation. Place the seal for the full length of the joint for sealed joint openings and, when required, extend it into the parapet wall on the low side or sides of the bridge.

3.1. **Sealed Expansion Joint (SEJ)**. Choose an approved joint system that conforms to the joint type and the design requirements shown on the plans. Secure each side of the joint by welding it to the adjacent reinforcing steel or other attachments as approved. Remove any connection holding the joint halves together immediately after each joint half is secured in place. Install the neoprene seal as a continuous piece to form a watertight seal.

3.2. **Armor Joint**. Place steel armor plates as shown on the plans. Secure each side of the joint by welding it to adjacent reinforcing steel or other attachments as approved. Remove any connection holding joint halves together immediately after each joint half is secured in place.

Seal the joint when specified. Abrasive blast clean the vertical faces of the steel plates where the sealant will be in contact to remove all visible rust, paint, mill scale, and other forms of contamination, leaving a white metal appearance. Clean the concrete in contact with the sealant by an approved method in conformance with the manufacturer’s specifications before placing sealant. After cleaning, air blast the joint to remove all dust. Place sealant in conformance with the manufacturer’s specifications and as shown on the plans. Repair damage to paint protection system above the seal when shown on the plans for steel armor plates to be painted.

3.3. **Header-Type Expansion Joint**. Meet with the manufacturer’s representative and the Engineer to discuss the required installation procedures of the materials before beginning the work. Perform the work in conformance with the manufacturer’s printed instructions and as discussed in the meeting. Additionally, the Engineer may request the presence of the manufacturer’s representative for additional training if work personnel are not adequately following manufacturer’s installation directions.

3.3.1. **Header**. Provide an approved polymer concrete in accordance with DMS-6140. Create the required void in the concrete surface or asphalt overlay to accept the header material as shown on the plans. Extend the depth of the void in the asphalt overlay to sound concrete. Remove any unsound steel or concrete and repair concrete in accordance with Item 429, "Concrete Structure Repair," and Item 785, "Bridge Joint Repair or Replacement." Use header material as repair material only when approved. Clean the voided region of all materials that could inhibit the bond between the header material and concrete or steel. Form the joint opening to the required width shown on the plans.

Place materials once approved. Place material on a clean, sound, and dry base when the ambient temperature is at least 45°F and rising or as required by the manufacturer. Do not place material on wet substrate or when raining.

Cure for the duration required by the manufacturer's data sheets before opening to traffic.

Tool or grind the upper corner of the header adjacent to the opening to a 1/4-in. radius.

3.3.2. **Sealant**. Provide an approved Class 1 or Class 7 joint sealant in accordance with DMS-6310, unless otherwise shown on the plans. Clean the joint opening of forming material, existing seal, and other material that will inhibit the bond between the header material and the sealant. Abrasive blast clean surfaces in contact with the sealant. Place an approved backer rod and the sealant as shown on the plans and in conformance with the manufacturer's specifications. Apply the primer, when required, at the specified rate and time interval before placing the sealant. Apply the sealant to dry joint surfaces unless otherwise recommended by the sealant manufacturer. Place primer and sealant when ambient temperature is rising and is between 55°F and 85°F to provide for adequate joint opening and compression of the sealant during curing. Tool any sealant material that is not self-leveling to force the sealant against the joint surfaces.

3.4. **Foam-Type Joint Seal**. Meet with the manufacturer's representative and the Engineer to discuss the required installation procedures for the materials before beginning the work. Perform the work in conformance with the manufacturer's printed instructions and as discussed in the meeting. Additionally, the Engineer may request the presence of the manufacturer's representative for additional training if work personnel are not adequately following the manufacturer's installation directions. Measure all joint openings and size the width of the seal in conformance with the manufacturer's specifications.

Provide one of the systems shown on the plans with materials meeting the following:

- ultraviolet stable polymer-impregnated foam body,
- rated for ±50% contraction or expansion of joint opening,
- adhered to expansion joint surfaces with epoxy adhesive,
- factory-attached traffic-grade silicone with minimum thickness of 0.07 in. on upper surface,
- compatible field-installed silicone caulk to attach silicone top to joint edges and for splicing,
- pre-compressed system for field installation, and
- a range of widths of joint seals to ensure the joint seal is in compression after installation is complete.

3.5. **Type "A" Joint**. Provide an approved Class 7 silicone joint sealant in accordance with DMS-6310, unless otherwise shown on the plans. Clean the joint opening of forming material, existing seal, and other material that will inhibit bond between the header material and the sealant. Abrasive blast clean surfaces in contact with the sealant. Place an approved backer rod, pre-formed bituminous fiber material, and sealant as shown on the plans and in conformance with the manufacturer's specifications. Apply the primer, when required, at the specified rate and time interval before applying the sealant. Apply the sealant to dry joint surfaces unless otherwise recommended by the sealant manufacturer. Place primer and sealant when ambient temperature is rising and is between 55°F and 85°F to provide for adequate joint opening and compression of the sealant during curing. Tool any sealant material that is not self-leveling to force the sealant against the joint surfaces.

4. MEASUREMENT

SEJs, armor joints, foam-type joint seals, and Type “A” joints will be measured by the foot. Header-type expansion joints will be measured by the cubic foot of header material and foot of sealant. Length measurement will be along the centerline of the joint at the surface of the roadway and up into the parapet. Calculate volume for header-type expansion joints using the length and width shown on the plans and the header depth measured in place.

SEJs, armor joints, foam-type joint seals, and Type “A” joints are a plans quantity measurement Item. The quantity to be paid is the quantity shown in the proposal, unless modified by Article 9.2., “Plans Quantity Measurement.” Additional measurements or calculations will be made if adjustments of quantities are required.

5. PAYMENT

The work performed and materials furnished in accordance with this Item and measured as provided under “Measurement” will be paid for at the unit price bid for “Sealed Expansion Joint” of the size (minimum total movement capacity) and designation specified, “Armor Joint,” “Armor Joint (With Seal),” “Foam Seal,” “Type A,” and “Header-Type Expansion Joint.” Sealing the joint will be subsidiary to these items with the exception of the header-type expansion joint. This price is full compensation for furnishing and installing the joint systems, including steel, and for materials, tools, equipment, labor, and incidentals.

For “Header-Type Expansion Joint,” header material will be paid for at the unit price bid for “Header-Type Expansion Joint,” and the sealant will be paid for at the unit price bid for “Joint Sealant.” This price is full compensation for furnishing and installing the joint systems and for materials, tools, equipment, labor, and incidentals.

Item 481
Pipe for Drains

1. DESCRIPTION

Furnish and install pipe for drains.

2. MATERIALS

Furnish polyvinyl chloride (PVC) pipe meeting the requirements of ASTM D1785, Schedule 40, and furnish PVC fittings meeting the requirements of ASTM D2466. PVC pipe and fittings meeting the requirements of ASTM D3034, Type SDR 35 may be used for installations encased in concrete or buried in soil.

Furnish a manufacturer's certification stating the material meets the appropriate ASTM specification.

Furnish pipe marked with:

- manufacturer's name or trademark and code;
- nominal size;
- PVC cell classification (example: 12454-B);
- schedule, size, or other legend (example: SDR-35 PVC Sewer Pipe); and
- specification designation (example: ASTM D1785).

Furnish fittings marked with:

- manufacturer's name or trademark;
- nominal size;
- material designation (example: PVC);
- schedule, size, or other legend (example: Schedule 40); and
- specification designation (example: ASTM D3034).

Furnish solvent meeting the requirements of ASTM D2564 for solvent-welding of fittings.

Provide other types of pipe and fittings as indicated.

Provide fittings, hangers, clamps, straps, anchors, and guard plates in accordance with the details shown on the plans.

3. CONSTRUCTION

Excavate and backfill for pipe installation in accordance with Item 400, "Excavation and Backfill for Structures." Install pipe as shown on the plans or as directed. Solvent-weld all fittings, including splice fittings, to provide a watertight fit. Do not splice straight sections of pipe at intervals shorter than 20 ft. unless at the end of a run or otherwise approved.

Degrease all exposed PVC pipe and fittings, and apply an acrylic water-based primer followed by a coating of the same color used for adjacent concrete surface unless otherwise shown on the plans.

Follow manufacturer's specifications for installation of other types of pipe (material other than PVC) when indicated.

4. MEASUREMENT

This Item will be measured by the foot along the centerline of the installed pipe of the nominal size shown on the plans.

5. PAYMENT

The work performed and materials furnished in accordance with this Item and measured as provided under "Measurement" will be paid for at the unit price bid for "Pipe" of the sizes and types specified. This price is full compensation for furnishing and installing the pipe and for fittings, hangers, clamps, straps, anchors, guard plates, painting, equipment, labor, tools, and incidentals. Excavation and backfill will not be paid for directly but will be considered subsidiary to this Item.

Item 483
Concrete Bridge Deck Surfacing

1. DESCRIPTION

Surface concrete bridge deck as specified to provide prepared substrate for concrete overlay or to remediate a finished surface.

2. EQUIPMENT

Use equipment within the maximum allowed legal load or provide analysis showing equipment will not overstress the bridge. Use machines equipped with dust control measures and shielding to prevent flying debris from leaving the work area.

2.1. **Micro Milling**. Use concrete milling equipment capable of maintaining constant depth of cut as specified. Equip machine with automated debris collection system. Provide micro milling drum with tool spacing up to 1/4 in. Do not allow travel speed in feet per minute to exceed 2/3 of the drum revolutions per minute.

2.2. **Hydro-Demolition**. Use equipment consisting of ultra-high pressure water jets (>10,000 psi) capable of removing concrete to depth specified. Provide machine that can be calibrated to remove an incremental depth of uniform strength concrete.

2.3. **Shot Blasting**. Use self-propelled shot blasting equipment using steel abrasive being propelled at the concrete surface and equipped with a self-contained vacuum system to collect all removed debris.

2.4. **Diamond Grinding**. Use self-propelled diamond grinding equipment capable of removing concrete surface and producing corduroy-type texture. Provide machine equipped with dual longitudinal controls capable of operating on both sides automatically from any longitudinal grade reference and with cutting wheel containing 50–60 diamond blades per foot. Minimize dust escaping into environment by equipping machine with self-contained vacuum system to collect all debris removed.

2.5. **Saw Grooving**. Use sawing equipment capable of cutting grooves in completed bridge slabs and top slabs of direct traffic culverts. Provide grooves that are 1/8–3/16 in. deep, nominally 1/8 in. wide, and spaced at 1 in. Use sawing equipment capable of cutting grooves in hardened concrete to within 18 in. of the barrier rail or curb.

3. CONSTRUCTION

Protect bridge joints, drains, and other appurtenances from surfacing operations. Following surfacing, clean the surface to remove all cuttings and debris. Dispose of all cuttings and debris properly.

Use chipping tools and other smaller approved concrete surfacing equipment in small areas not accessible to the large surfacing equipment.

Approval to begin work is not an endorsement of proposed equipment. If equipment fails to meet specification requirements, replacing equipment may be required. No additional time or compensation to adjust or replace equipment will be granted.

Perform concrete bridge deck surfacing as specified in accordance with the following listed methods.

3.1. **Micro Milling**. Mill the existing deck to remove concrete to the depth specified. Provide a uniformly rough surface with a chipped appearance suitable for bonding a concrete overlay. Scarify at locations shown on the

plans or as directed to the depths shown on the plans. Measure the depth from the level of the existing surface to the high points on the scarified surface.

Ensure damage does not occur to the bridge slab reinforcing steel, armored joints, slab joints, drainage hardware, and other appurtenances. Stop milling operations if reinforcing steel is encountered. Proceed with further milling only when approved to do so.

Establish and maintain independent grade control for concrete scarifying operations when appropriate or required.

Use chipping tools to remove concrete in small areas not accessible to the mechanical scarifier.

3.2. **Hydro-Demolition**. Submit for approval a water disposal plan associated with the work. Follow all water disposal requirements in conformance with federal, state, and local law. Temporarily plug all bridge drains near the area of work to prevent runoff resulting from the work from being released. Protect surrounding property and traffic from water spray and material dislodged. Remove plugs after completion of the work.

Provide water for hydro-demolition that meets the requirements of Section 421.2.5., “Water,” Table 1.

Provide remotely operated vacuum unit to reclaim water, debris, and concrete cuttings. Collect water, debris, and concrete cuttings in a separate unit located off the bridge deck. All equipment on bridge deck must be in accordance with Sections 7.16.2., “Construction Equipment Operating on Structures,” and 7.16.3., “Loads on Structures.” Alternate reclamation equipment may be approved, provided a structural analysis, signed and sealed by a licensed professional engineer, is submitted that considers depth of removal and deterioration of structural elements.

Demonstrate hydro-demolition on test areas as specified to calibrate machine to obtain concrete removal depth and finish as specified and as approved. At minimum, calibrate machine to remove all unsound concrete and sound concrete to the specified depth.

Do not damage reinforcing steel. If more than one half of the diameter of the reinforcing bar is exposed and the bar is corroded around the circumference, adjacent concrete is rust stained, or the bar is debonded from the substrate concrete, chip away concrete or water blast to provide a minimum clearance of 3/4 in. or 1.5 times the largest size aggregate in the repair material. Stop and recalibrate machine when depth of removal or surface roughness is different from that approved.

Cold planing or milling operations before hydro-demolition will be subsidiary to hydro-demolition. At minimum, hydro-demolition will be no less than 3/4 in. unless otherwise shown on the plans.

3.3. **Shot Blasting**. Demonstrate shot blasting on test areas as specified to calibrate machine to obtain depth of surface removal required and to obtain finish as specified and as approved.

Do not alter grade or cross slope unless shown otherwise.

Maintain and adjust machine calibration to produce surfacing required.

3.4. **Diamond Grinding**. Demonstrate diamond grinding on specified area and obtain approval of finish produced.

Perform grinding in longitudinal direction. Grind surfaces on both sides of transverse joints to be flush (same elevation). Eliminate minor depressions by extra grinding as directed.

Produce a uniform surface with a longitudinal corduroy-type texture that eliminates joint and crack faults. Maintain transverse cross-slope to provide drainage across surface.

Repeat grinding until surface grade and cross-slope satisfy ride requirements. Minimum ride requirements are 1/4 in. in 10 ft. unless shown otherwise.

3.5. **Saw Grooving**. Cut grooves into concrete surface parallel to the structure centerline. Cut grooves across the slab to within 18 in. of the barrier rail, curb, or median divider. At skewed metal expansion joints in bridge slabs, adjust groove cutting by using narrow width cutting heads so all grooves end within 6 in. of the joint, measured perpendicular to the centerline of the metal joint. Leave no ungrooved surface wider than 6 in. adjacent to either side of the joint. Cut grooves continuously across construction joints or other joints in the concrete less than 1/2 in. wide. Apply the same procedure described above where barrier rails, curbs, or median dividers are not parallel to the structure centerline to maintain the 18-in. maximum dimension from the end of the grooves to the gutter line. Cut grooves continuously across formed concrete joints.

4. MEASUREMENT

This Item will be measured by the square yard of concrete bridge deck surfaced.

5. PAYMENT

The work performed and equipment furnished in accordance with this Item and measured as provided under "Measurement" will be paid for at the unit price bid for "Micro Milling Concrete Slab" to the depth required, "Hydro-Demolition" to the depth required, "Shot Blasting," "Diamond Grinding Slab," and "Saw Grooving." This price is full compensation for removing all material to the depths shown; preparing the surface; texturing the surface; saw grooving the surface; loading, hauling, unloading, and disposing of the cuttings; protection of drains, property, and traffic; disposal of water and runoff; and equipment, labor, tools, and incidentals.

Item 490
Timber Structures

1. DESCRIPTION

Construct timber structures and timber portions of structures.

2. MATERIALS

Supply materials as shown on plans.

2.1. **Timber.** Supply timber in accordance with Item 491, "Timber for Structures."

2.2. **Hardware.** Galvanize all hardware including nails, in accordance with Item 445, "Galvanizing." Hardware may be cast or malleable iron or cut from steel plate as specified. Use bolts, screws, pins, washers, nuts and spikes of the size and type specified.

3. CONSTRUCTION

Construct structures in accordance with the plans. Complete all cutting and boring of timber before treatment if practical. Ensure that all framing is true and exact. Drive nails and spikes to set the heads flush with the surface of the wood without making deep hammer marks in wood surfaces. Accurately cut all lumber and timber, and frame it so that the joints have even bearing over the entire contact surface. Use washers under bolt heads and nuts. Countersink hardware when smooth or flush surfaces are required. Remove all bolt stock projecting beyond 1/4 in. from the top of the nut.

3.1. **Storage and Handling of Timber:** Store timber in piles at the worksite. Stack timber at least 12 in. above the ground surface. Arrange timber to shed water and allow air circulation to prevent warping. Protect it from weather. Clear the ground of weeds and rubbish underneath and near material piles. Handle timber without dropping, breaking outer fibers, or bruising. Use slings or other approved equipment. Provide corner protectors when using metal bands to bundle members.

3.2. **Stringers:** Size stringers to uniform depth at bearings, and place in position so knots near edges will be in the top portions of the stringers. Lay stringers with the crown up if practical. Stringers may have butt joints or lapped joints. Stagger the joints when stringers are 2 panels in length. Fasten all stringers securely by bolts or nails as shown on plans.

3.3. **Bridging:** Frame cross-bridging or diaphragms or blocking between stringers and beams neatly and accurately, and securely toe-nail with at least 2 nails in each end.

3.4. **Decking:** Composite decking to be Trex Select, TimberTech Prime+ Collection, Fiberon Sanctuary or equal. Decking consists of grooved boards and non-grooved rim boards as shown on the Plans. Boards to be attached with hidden or concealed fasteners provided by the decking manufacturer. Boards to be installed in accordance the Manufacturer's installation instructions.

3.5. **Railings:** Stagger butt joints so adjacent rail joints do not occur on the same post. Bolt connections wherever possible.

3.6. **Holes for Bolts, Dowels, Rods, and Lag Screws:** Bore holes for round drift pins and dowels with a bit 1/16 in. less in diameter than the bolt or dowel. Bore holes for machine bolts the same diameter as the bolt. Bore holes for rods 1/16 in. greater than the diameter of the rod. Bore holes for lag screws with a bit no larger than

the root of the thread and 1/2 in. deeper than the penetration of the lag screws and equal to the diameter of the shank for the length of the shank.

3.7. **Field Treatment:** After cutting and drilling, treat cuts and drilled holes in treated piling or timbers and all abrasions as specified in Item 492 “Timber Preservative and Treatment.”

4. MEASUREMENT AND PAYMENT

The work performed, materials furnished, equipment, labor, tools, and incidentals will not be measured or paid directly, but will be subsidiary to pertinent Items.

Item 491
Timber for Structures

1. DESCRIPTION

Furnish and place lumber and timber.

2. MATERIALS

Furnish materials in accordance with details shown on the plans. Treat all lumber and timber in accordance with Item 492, "Timber Preservative and Treatment," unless otherwise shown on the plans. All material must bear the grade mark of an approved American Lumber Standards Committee agency or the identification mark of a state-approved inspection agency. A grade mark or identification mark must be on the timber before treating.

2.1. **Finish:** Provide material for railings surfaced on 4 sides (S4S). Dress other timber as indicated on the plans.

2.2. **Timber and Lumber:** Species and grades are shown on the plans. Timber grade designations refer to standard designations of the Southern Pine Inspection Bureau Standard (SPIB) or the Western Wood Products Association (WWPA) grading rules.

2.3. **Sign Posts:** Use No. 1 Southern Pine, dried before treatment to 19% maximum moisture content. Do not use compression wood on any face. Compression wood is allowed if wholly enclosed in the piece, at least 6 annual rings from the surface, and not more than 1/4 in. wide in its maximum dimension.

3. EQUIPMENT

Use slings or other approved equipment for handling. Do not use equipment that may damage the surface of the wood.

4. CONSTRUCTION

Construct timber structures in accordance with requirements of Item 490, "Timber Structures."

5. MEASUREMENT

Timber will be measured by the 1,000 board feet (MBF), computed on nominal sizes and the shortest commercial lengths practical for use.

6. PAYMENT

The work performed and materials furnished in accordance with this Item and measured as provided under "Measurement" will be paid for at the unit price bid for "Treated Timber" or "Untreated Timber." This price is full compensation for materials, hardware, equipment, tools, labor, painting, preservative treatment, and incidentals.

Timber used for erection purposes that is not part of the permanent structure will not be paid for directly but will be subsidiary to this Item. Timber piling will be paid for under Item 406, "Timber Piling."

Item 492
Timber Preservative and Treatment

1. DESCRIPTION

Pressure treat poles, posts, timbers, and lumber with preservative.

2. MATERIALS

2.1. **Application:** Treating plants furnishing treated timber products must meet the requirements of AWPA Standard M3, Part A. All treaters except those of structural glued laminated timber must be on the TxDOT-approved MPL list. AWPA standards govern materials and methods of treatments including seasoning, preservatives, and inspection for treatment. Acceptable preservative treatments that meet AWPA Use Category to be UC4C are the following treatments:

2.1.1. ACQ (Alkaline Copper Quaternary)

2.1.2. CA-C (Copper Azole)

3. CONSTRUCTION

3.1. **Identification:** Each piece or bundle of treated timber products must have a legible brand mark or tag indicating the name of the treater, date of treatment or lot number, and the AWPA treatment specification symbol. Furnish a completed TxDOT "Certification of Compliance" Form 2148 with every shipment of treated timber products.

3.2. **Field Treatment:** When it is necessary to bore holes or to cut pressure-treated materials after treatment or when any treated surface is badly scarred, treat the hole, cut, or scarred surface per AWPA Standard M4.

3.2.1. The end grain of all timber shall be sealed with a wax emulsion sealant. Acceptable products are;

3.2.1.1. Original Anchorseal
3.2.1.2. Ipe Seal End Grain Sealant Wax Based
3.2.1.3. Osmo End Grain Sealing Wax
3.2.1.4. Or equal products

4. MEASUREMENT AND PAYMENT

The work performed, materials furnished, equipment, labor, tools, and incidentals will not be measured or paid directly, but will be subsidiary to pertinent Items.

Item 496
Removing Structures

1. DESCRIPTION

Remove and either dispose of or salvage structures.

2. CONSTRUCTION

2.1. **Demolition Plans**. Follow the demolition sequence shown on the plans for bridge structures to be removed or submit a demolition plan if shown on the plans. Include in the required demolition plan the type and location of equipment to be used, the method and sequence of removal of the structural elements, and a narrative indicating the stability of the partially demolished structure is maintained throughout the demolition process. Have these plans signed and sealed by a licensed professional engineer when demolished structure intersects active roadways and as otherwise shown on the plans. Submit required demolition plans at least 14 days before starting work unless otherwise directed. Department approval of these plans is not required, but the Department reserves the right to request modifications to the plans when work could affect the safety of the traveling public and when around other transportation facilities to remain in place. Notify the Department 30 days before starting any bridge demolition work to allow for required notifications to other agencies.

2.2. **Removal**.

2.2.1. **Pipes**. Avoid damaging appurtenances determined by the Engineer to be salvageable.

2.2.2. **Concrete, Brick, or Stone Structures**. Portions of structures that will not interfere with the proposed construction may remain in place 2 ft. or more below the permanent ground line. Square off remaining structures and cut reinforcement flush with the surface of the concrete.

2.2.3. **Steel Structures**. Dismantle steel to be retained by the Department or re-erected by cold-cutting fastener heads and punching or drilling the remaining portion of the fastener, air-arc gouging welded connections, and flame-cutting beams along a straight line. The Engineer may approve other methods of cutting. Cut beams at the locations shown on the plans. Match-mark steel to be re-erected with paint in conformance with the erection drawings. Remove steel piles or cut off 2 ft. or more below the permanent ground line.

2.2.4. **Timber Structures**. Remove all fasteners from timber determined by the Engineer to be salvageable. Remove timber piles or cut off 2 ft. or more below the permanent ground line.

2.3. **Salvage**. Avoid damage to materials shown on the plans to be salvaged. Deliver materials to be retained by the Department to the location shown on the plans. Block up salvaged steel materials off the ground.

2.4. **Disposal**. Material removed that is not deemed to be salvageable is the property of the Contractor. Dispose of removed material off the right of way in conformance with federal, state, and local regulations.

2.5. **Backfill**. Backfill excavation and voids to the original ground line if resulting from the removal of structures. Place backfill that will support any portion of the roadbed or embankment to the same requirements for placing embankment. Backfill other areas in 10-in. layers, loose measurement, and compact to the density of adjacent undisturbed material.

3. MEASUREMENT

This Item will be measured by each structure or by the foot.

4. PAYMENT

The work performed in accordance with this Item and measured as provided under “Measurement” will be paid for at the unit price bid for “Removing Structures” of the type of structure specified. This price is full compensation for demolition plan preparation, loading, hauling, disposal, stockpiling, removal of appurtenances, excavation and backfill, equipment, labor, tools, and incidentals.

Item 500
Mobilization

1. DESCRIPTION

Establish and remove offices, plants, and facilities. Move personnel, equipment, and supplies to and from the project or the vicinity of the project site to begin work or complete work on Contract Items. Bonds and insurance are required for performing mobilization.

For Contracts with emergency mobilization, provide a person and method of contact available 24 hr. per day, 7 days per week, unless otherwise shown on the plans. The time of notice will be the transmission time of the written notice or notice provided orally by the Department's representative.

2. MEASUREMENT

This Item will be measured by the lump sum or each as the work progresses. Mobilization is calculated on the base bid only and will not be paid for separately on any additive alternate items added to the Contract.

3. PAYMENT

For this Item, the adjusted Contract amount will be calculated as the total Contract amount less the lump sum for mobilization. Material on hand will not be considered as a construction item earned when calculating mobilization payment. Except for Contracts with callout or emergency work, mobilization will be paid in partial payments as follows.

- Payment will be made upon presentation of a paid invoice for the payment or performance bonds and required insurance.
- Payment will be made upon verification of documented expenditures for plant and facility setup. The combined amount for all these facilities will be no more than 10% of the mobilization lump sum or 1% of the total Contract amount, whichever is less.
- When 1% of the adjusted Contract amount for construction Items is earned, 50% of the mobilization lump sum bid or 5% of the total Contract amount, whichever is less, will be paid. Previous payments under this Item will be deducted from this amount.
- When 5% of the adjusted Contract amount for construction Items is earned, 75% of the mobilization lump sum bid or 10% of the total Contract amount, whichever is less, will be paid. Previous payments under the Item will be deducted from this amount.
- When 10% of the adjusted Contract amount for construction Items is earned, 90% of the mobilization lump sum bid or 10% of the total Contract amount, whichever is less, will be paid. Previous payments under this Item will be deducted from this amount.
- Upon final acceptance, 97% of the mobilization lump sum bid will be paid. Previous payments under this Item will be deducted from this amount.
- Payment for the remainder of the lump sum bid for "Mobilization" will be made after all submittals are received, after final quantities have been determined, and when any separate vegetative establishment and maintenance, test, and performance periods provided for in the Contract have been successfully completed.

For projects with extended maintenance or performance periods, payment for the remainder of the lump sum bid for "Mobilization" will be made 6 mo. after final acceptance.

For Contracts with callout or emergency work, “Mobilization” will be paid as follows.

- Payment will be made upon presentation of a paid invoice for the payment of performance bonds and required insurance.
- Mobilization for callout work will be paid for each callout work request.
- Mobilization for emergency work will be paid for each emergency work request.

Item 506

Temporary Erosion, Sedimentation, and Environmental Controls

1. DESCRIPTION

Install, maintain, and remove erosion, sedimentation, and environmental control measures to prevent or reduce the discharge of pollutants in accordance with the Storm Water Pollution Prevention Plan (SWP3) on the plans and the Texas Pollutant Discharge Elimination System (TPDES) General Permit TXR150000. Control measures are defined as Best Management Practices used to prevent or reduce the discharge of pollutants. Control measures include, but are not limited to, rock filter dams, temporary pipe slope drains, temporary paved flumes, construction exits, earthwork for erosion control, pipe, construction perimeter fence, sandbags, temporary sediment control fence, biodegradable erosion control logs, vertical tracking, temporary or permanent seeding, and other measures. Erosion and sediment control devices must be selected from the *Erosion Control Approved Products* or *Sediment Control Approved Products* lists. Perform work in a manner to prevent degradation of receiving waters, facilitate project construction, and comply with applicable federal, state, and local regulations. Ensure the installation and maintenance of control measures is performed in accordance with the manufacturer's or designer's specifications.

Provide the Contractor Certification of Compliance before performing SWP3 or soil disturbing activities. By signing the Contractor Certification of Compliance, the Contractor certifies they have read and understand the requirements applicable to this project pertaining to the SWP3, the plans, and the TPDES General Permit TXR150000. The Contractor is responsible for any penalties associated with non-performance of installation or maintenance activities required for compliance. Ensure the most current version of the certificate is executed for this project.

2. MATERIALS

Furnish materials in accordance with the following:

- Item 161, "Compost,"
- Item 432, "Riprap," and
- Item 556, "Pipe Underdrains."

2.1. **Rock Filter Dams**.

2.1.1. **Aggregate**. Furnish aggregate with approved hardness, durability, cleanliness, and resistance to crumbling, flaking, and eroding. Provide the following:

- Types 1, 2, and 4 Rock Filter Dams. Use 3 to 6 in. aggregate.
- Type 3 Rock Filter Dams. Use 4 to 8 in. aggregate.

2.1.2. **Wire**. Provide minimum 20 gauge galvanized wire for the steel wire mesh and tie wires for Types 2 and 3 rock filter dams. Type 4 dams require:

- a double-twisted, hexagonal weave with a nominal mesh opening of 2-1/2 × 3-1/4 in.;
- minimum 0.0866 in. steel wire for netting;
- minimum 0.1063 in. steel wire for selvages and corners; and
- minimum 0.0866 in. for binding or tie wire.

2.1.3. **Sandbag Material**. Furnish sandbags meeting Section 506.2.8., "Sandbags," except that any gradation of aggregate may be used to fill the sandbags.

2.2. **Temporary Pipe Slope Drains**. Provide corrugated metal pipe, polyvinyl chloride (PVC) pipe, flexible tubing, watertight connection bands, grommet materials, prefabricated fittings, and flared entrance sections that conform to the plans. Recycled and other materials meeting these requirements are allowed if approved.

Furnish concrete in accordance with Item 432, "Riprap."

2.3. **Temporary Paved Flumes**. Furnish asphalt concrete, hydraulic cement concrete, or other comparable non-erodible material that conforms to the plans. Provide rock or rubble with a minimum diameter of 6 in. and a maximum volume of 1/2 cu. ft. for the construction of energy dissipaters.

2.4. **Construction Exits**. Provide materials that meet the details shown on the plans and this Section.

2.4.1. **Rock Construction Exit**. Provide crushed aggregate for long- and short-term construction exits. Furnish aggregates that are clean, hard, durable, and free from adherent coatings such as salt, alkali, dirt, clay, loam, shale, soft or flaky materials, and organic and injurious matter. Use 4- to 8-in. aggregate for Type 1. Use 2- to 4-in. aggregate for Type 3.

2.4.2. **Timber Construction Exit**. Furnish No. 2 quality or better railroad ties and timbers for long-term construction exits, free of large and loose knots and treated to control rot. Fasten timbers with nuts and bolts or lag bolts, of at least 1/2 in. diameter, unless otherwise shown on the plans or allowed. Provide plywood or pressed wafer board at least 1/2 in. thick for short-term exits.

2.4.3. **Foundation Course**. Provide a foundation course consisting of flexible base, bituminous concrete, hydraulic cement concrete, or other materials as shown on the plans or directed.

2.5. **Embankment for Erosion Control**. Provide rock, loam, clay, topsoil, or other earth materials that will form a stable embankment to meet the intended use.

2.6. **Pipe**. Provide pipe outlet material in accordance with Item 556, "Pipe Underdrains," and details shown on the plans.

2.7. **Construction Perimeter Fence**.

2.7.1. **Posts**. Provide essentially straight wood or steel posts that are at least 60 in. long. Furnish soft wood posts with a minimum diameter of 3 in., or use nominal 2 × 4 in. boards. Furnish hardwood posts with a minimum cross-section of 1-1/2 × 1-1/5 in. Furnish T- or L-shaped steel posts with a minimum weight of 1.25 lb. per foot.

2.7.2. **Fence**. Provide orange construction fencing as approved.

2.7.3. **Fence Wire**. Provide 14 gauge or larger galvanized smooth or twisted wire. Provide 16 gauge or larger tie wire.

2.7.4. **Flagging**. Provide brightly-colored flagging that is fade-resistant and at least 3/4 in. wide to provide maximum visibility both day and night.

2.7.5. **Staples**. Provide staples with a crown at least 1/2 in. wide and legs at least 1/2 in. long.

2.7.6. **Used Materials**. Previously used materials meeting the applicable requirements may be used if approved.

2.8. **Sandbags**. Provide sandbag material of polypropylene, polyethylene, or polyamide woven fabric with a minimum unit weight of 4 oz. per square yard, a Mullen burst-strength exceeding 300 psi, and an ultraviolet stability exceeding 70%.

Use natural coarse sand or manufactured sand meeting the gradation given in Table 1 to fill sandbags. Filled sandbags must be 24 to 30 in. long, 16 to 18 in. wide, and 6 to 8 in. thick.

Table 1
Sand Gradation

Sieve Size	Retained (% by Weight)
#4	Maximum 3%
#100	Minimum 80%
#200	Minimum 95%

Aggregate may be used instead of sand for situations where sandbags are not adjacent to traffic. The aggregate size must not exceed 3/8 in.

2.9. **Temporary Sediment Control Fence**. Provide a net-reinforced fence using woven geo-textile fabric. Logos visible to the traveling public will not be allowed.

2.9.1. **Fabric**. Provide fabric materials in accordance with DMS-6230, "Temporary Sediment Control Fence Fabric."

2.9.2. **Posts**. Provide essentially straight wood or steel posts with a minimum length of 48 in., unless otherwise shown on the plans. Furnish soft wood posts at least 3 in. in diameter, or use nominal 2 × 4 in. boards. Furnish hardwood posts with a minimum cross-section of 1-1/2 × 1-1/2 in. Furnish T- or L-shaped steel posts with a minimum weight of 1.25 lb. per foot.

2.9.3. **Net Reinforcement**. Provide net reinforcement of at least 12.5 gauge (SWG) galvanized welded wire mesh, with a maximum opening size of 2 × 4 in., at least 24 in. wide, unless otherwise shown on the plans.

2.9.4. **Staples**. Provide staples with a crown at least 3/4 in. wide and legs 1/2 in. long.

2.9.5. **Used Materials**. Use recycled material meeting the applicable requirements if approved.

2.10. **Biodegradable Erosion Control Logs**.

2.10.1. **Core Material**. Furnish core material that is biodegradable or recyclable. Use compost, mulch, aspen excelsior wood fibers, chipped site vegetation, agricultural rice or wheat straw, coconut fiber, 100% recyclable fibers, or any other acceptable material unless specifically called out on the plans. Permit no more than 5% of the material to escape from the containment mesh. Furnish compost meeting the requirements of Item 161, "Compost."

2.10.2. **Containment Mesh**. Furnish containment mesh that is 100% biodegradable, photodegradable, or recyclable such as burlap, twine, UV photodegradable plastic, polyester, or any other acceptable material.

Furnish biodegradable or photodegradable containment mesh when log will remain in place as part of a vegetative system.

Furnish recyclable containment mesh for temporary installations.

2.10.3. **Size**. Furnish biodegradable erosion control logs with diameters shown on the plans or as directed. Stuff containment mesh densely so logs do not deform.

3. QUALIFICATIONS, TRAINING, AND EMPLOYEE REQUIREMENTS

3.1. **Contractor Responsible Person Environmental (CRPE) Qualifications and Responsibilities**. Provide and designate in writing at the preconstruction conference a CRPE and alternate CRPE who have overall responsibility for the storm water management program. The CRPE will implement storm water and erosion control practices; will oversee and observe storm water control measure monitoring and management; will monitor the project site daily and produce daily monitoring reports as long as there are BMPs in place or soil disturbing activities are evident to ensure compliance with the SWP3 and TPDES General Permit TXR150000. During time suspensions when work is not occurring or on contract non-work days, daily inspections are not required unless a rain event has occurred. The CRPE will provide recommendations on how to improve the effectiveness of control measures. Attend the Department's preconstruction conference

for the project. Ensure training is completed as identified in Section 506.3.3., "Training," by all applicable personnel before employees work on the project. Document and submit a list, signed by the CRPE, of all applicable Contractor and subcontractor employees who have completed the training. Include the employee's name, the training course name, and date the employee completed the training. Provide the most current list at the preconstruction conference or before SWP3 or soil disturbing activities. Update the list as needed and provide the updated list when updated.

3.2. **Contractor Superintendent Qualifications and Responsibilities**. Provide a superintendent that is competent, has experience with and knowledge of storm water management, and is knowledgeable of the requirements and the conditions of the TPDES General Permit TXR150000. The superintendent will manage and oversee the day to day operations and activities at the project site; work with the CRPE to provide effective storm water management at the project site; represent and act on behalf of the Contractor; and attend the Department's preconstruction conference for the project.

3.3. **Training**. All Contractor and subcontractor employees involved in soil disturbing activities, small or large structures, storm water control measures, and seeding activities must complete training as prescribed by the Department.

4. CONSTRUCTION

4.1. **Contractor Responsibilities**. Implement the SWP3 for the project site in accordance with the plans and specifications, TPDES General Permit TXR150000, and as directed. Coordinate storm water management with all other work on the project. Develop and implement an SWP3 for project-specific material supply plants within and outside of the Department's right of way in accordance with the specific or general storm water permit requirements. Prevent water pollution from storm water associated with construction activity from entering any surface water or private property on or adjacent to the project site.

4.2. **Implementation**. The CRPE, or alternate CRPE, must be accessible by phone and able to respond to project-related storm water management or other environmental emergencies 24 hr. per day.

4.2.1. **Commencement**. Implement the SWP3 as shown and as directed. Contractor-proposed recommendations for changes will be allowed as approved. Conform to the established guidelines in the TPDES General Permit TXR150000 to make changes. Do not implement changes until approval has been received and changes have been incorporated into the plans. Minor adjustments to meet field conditions are allowed and will be recorded in the SWP3.

4.2.2. **Phasing**. Implement control measures before the commencement of activities that result in soil disturbance. Phase and minimize the soil disturbance to the areas shown on the plans. Coordinate temporary control measures with permanent control measures and all other work activities on the project to assure economical, effective, safe, and continuous water pollution prevention. Provide control measures that are appropriate to the construction means, methods, and sequencing allowed by the Contract. Exercise precaution throughout the life of the project to prevent pollution of ground waters and surface waters. Schedule and perform clearing and grubbing operations so that stabilization measures will follow immediately thereafter if project conditions permit. Bring all grading sections to final grade as soon as possible and implement temporary and permanent control measures at the earliest time possible. Implement temporary control measures when required by the TPDES General Permit TXR150000 or otherwise necessitated by project conditions.

Do not prolong final grading and shaping. Preserve vegetation where possible throughout the project, and minimize clearing, grubbing, and excavation within stream banks, bed, and approach sections.

4.3. **General**.

4.3.1. **Temporary Alterations or Control Measure Removal**. Altering or removal of control measures is allowed when control measures are restored within the same working day.

4.3.2. **Stabilization**. Initiate stabilization for disturbed areas no more than 14 days after the construction activities in that portion of the site have temporarily or permanently ceased. Establish a uniform vegetative cover or use another stabilization practice in accordance with the TPDES General Permit TXR150000.

4.3.3. **Finished Work**. Remove and dispose of all temporary control measures upon acceptance of vegetative cover or other stabilization practice unless otherwise directed. Complete soil disturbing activities and establish a uniform perennial vegetative cover. A project will not be considered for acceptance until a vegetative cover of 70% density of existing adjacent undisturbed areas is obtained or equivalent permanent stabilization is obtained in accordance with the TPDES General Permit TXR150000. An exception will be allowed in arid areas as defined in the TPDES General Permit TXR150000.

4.3.4. **Restricted Activities and Required Precautions**. Do not discharge onto the ground or surface waters any pollutants such as chemicals, raw sewage, fuels, lubricants, coolants, hydraulic fluids, bitumens, or any other petroleum product. Operate and maintain equipment on-site to prevent actual or potential water pollution. Manage, control, and dispose of litter on-site such that no adverse impacts to water quality occur. Prevent dust from creating a potential or actual unsafe condition, public nuisance, or condition endangering the value, utility, or appearance of any property. Wash out concrete trucks only as described in the TPDES General Permit TXR150000. Use appropriate controls to minimize the offsite transport of suspended sediments and other pollutants if it is necessary to pump or channel standing water (i.e., dewatering). Prevent discharges that would contribute to a violation of Edwards Aquifer Rules, water quality standards, the impairment of a listed water body, or other state or federal law.

4.4. **Installation, Maintenance, and Removal Work**. Perform work in accordance with the SWP3, according to manufacturers' guidelines, and in accordance with the TPDES General Permit TXR150000. Install and maintain the integrity of temporary erosion and sedimentation control devices to accumulate silt and debris until soil disturbing activities are completed and permanent erosion control features are in place or the disturbed area has been adequately stabilized as approved.

The Department will inspect and document the condition of the control measures at the frequency shown on the plans and will provide the Construction SWP3 Field Inspection and Maintenance Reports to the Contractor. Make corrections as soon as possible before the next anticipated rain event or within 7 calendar days after being able to enter the worksite for each control measure. The only acceptable reason for not accomplishing the corrections with the time frame specified is when site conditions are "Too Wet to Work." Take immediate action if a correction is deemed critical as directed. When corrections are not made within the established time frame, all work will cease on the project and time charges will continue while the control measures are brought into compliance. Commence work once the Engineer reviews and documents the project is in compliance. Commencing work does not release the Contractor of the liability for noncompliance of the SWP3, plans, or TPDES General Permit TXR150000.

The Engineer may limit the disturbed area if the Contractor cannot control soil erosion and sedimentation resulting from the Contractor's operations. Implement additional controls as directed.

Remove devices upon approval or as directed. Finish-grade and dress the area upon removal. Stabilize disturbed areas in accordance with the permit, and as shown on the plans or directed. Materials removed are considered consumed by the project. Retain ownership of stockpiled material and remove it from the project when new installations or replacements are no longer required.

4.4.1. **Rock Filter Dams for Erosion Control**. Remove trees, brush, stumps, and other objectionable material that may interfere with the construction of rock filter dams. Place sandbags as a foundation when required or at the Contractor's option.

Place the aggregate to the lines, height, and slopes specified, without undue voids for Types 1, 2, 3, and 5. Place the aggregate on the mesh and then fold the mesh at the upstream side over the aggregate and secure it to itself on the downstream side with wire ties, or hog rings for Types 2 and 3, or as directed. Place rock filter dams perpendicular to the flow of the stream or channel unless otherwise directed. Construct filter dams according to the following criteria unless otherwise shown on the plans:

4.4.1.1. **Type 1 (Non-Reinforced)**.

- **Height**. At least 18 in. measured vertically from existing ground to top of filter dam.
- **Top Width**. At least 2 ft.
- **Slopes**. No steeper than 2:1.

4.4.1.2. **Type 2 (Reinforced)**.

- **Height**. At least 18 in. measured vertically from existing ground to top of filter dam.
- **Top Width**. At least 2 ft.
- **Slopes**. No steeper than 2:1.

4.4.1.3. **Type 3 (Reinforced)**.

- **Height**. At least 36 in. measured vertically from existing ground to top of filter dam.
- **Top Width**. At least 2 ft.
- **Slopes**. No steeper than 2:1.

4.4.1.4. **Type 4 (Sack Gabions)**. Unfold sack gabions and smooth out kinks and bends. Connect the sides by lacing in a single loop–double loop pattern on 4- to 5-in. spacing for vertical filling. Pull the end lacing rod at one end until tight, wrap around the end, and twist 4 times. Fill with stone at the filling end, pull the rod tight, cut the wire with approximately 6 in. remaining, and twist wires 4 times.

Place the sack flat in a filling trough, fill with stone, connect sides, and secure ends as described above for horizontal filling.

Lift and place without damaging the gabion. Shape sack gabions to existing contours.

4.4.1.5. **Type 5**. Provide rock filter dams as shown on the plans.

4.4.2. **Temporary Pipe Slope Drains**. Install pipe with a slope as shown on the plans or as directed. Construct embankment for the drainage system in 8-in. lifts to the required elevations. Hand-tamp the soil around and under the entrance section to the top of the embankment as shown on the plans or as directed. Form the top of the embankment or earth dike over the pipe slope drain at least 1 ft. higher than the top of the inlet pipe at all points. Secure the pipe with hold-downs or hold-down grommets spaced a maximum of 10 ft. on center. Construct the energy dissipaters or sediment traps as shown on the plans or as directed. Construct the sediment trap using concrete or rubble riprap in accordance with Item 432, “Riprap,” when designated on the plans.

4.4.3. **Temporary Paved Flumes**. Construct paved flumes as shown on the plans or as directed. Provide excavation and embankment (including compaction of the subgrade) of material to the dimensions shown on the plans unless otherwise indicated. Install a rock or rubble riprap energy dissipater, constructed from the materials specified above, to a minimum depth of 9 in. at the flume outlet to the limits shown on the plans or as directed.

4.4.4. **Construction Exits**. Prevent traffic from crossing or exiting the construction site or moving directly onto a public roadway, alley, sidewalk, parking area, or other right of way areas other than at the location of construction exits when tracking conditions exist. Construct exits for either long- or short-term use.

4.4.4.1. **Long-Term**. Place the exit over a foundation course as required. Grade the foundation course or compacted subgrade to direct runoff from the construction exits to a sediment trap as shown on the plans or as directed. Construct exits with a width of at least 14 ft. for one-way and 20 ft. for two-way traffic for the full width of the exit, or as directed.

4.4.4.1.1. **Type 1**. Construct to a depth of at least 8 in. using crushed aggregate as shown on the plans or as directed.

4.4.4.1.2. **Type 2**. Construct using railroad ties and timbers as shown on the plans or as directed.

4.4.4.2. **Short-Term**.

4.4.4.2.1. **Type 3**. Construct using crushed aggregate, plywood, or wafer board. This type of exit may be used for daily operations where long-term exits are not practical.

4.4.4.2.2. **Type 4**. Construct as shown on the plans or as directed.

4.4.5. **Earthwork for Erosion Control**. Perform excavation and embankment operations to minimize erosion and to remove collected sediments from other erosion control devices.

4.4.5.1. **Excavation and Embankment for Erosion Control Features**. Place earth dikes, swales, or combinations of both along the low crown of daily lift placement, or as directed, to prevent runoff spillover. Place swales and dikes at other locations as shown on the plans or as directed to prevent runoff spillover or to divert runoff. Construct cuts with the low end blocked with undisturbed earth to prevent erosion of hillsides. Construct sediment traps at drainage structures in conjunction with other erosion control measures as shown on the plans or as directed.

Create a sediment basin, where required, providing 3,600 cu. ft. of storage per acre drained, or equivalent control measures for drainage locations that serve an area with 10 or more disturbed acres at one time, not including offsite areas.

4.4.5.2. **Excavation of Sediment and Debris**. Remove sediment and debris when accumulation affects the performance of the devices, after a rain, and when directed.

4.4.6. **Construction Perimeter Fence**. Construct, align, and locate fencing as shown on the plans or as directed.

4.4.6.1. **Installation of Posts**. Embed posts 18 in. deep or adequately anchor in rock, with a spacing of 8 to 10 ft.

4.4.6.2. **Wire Attachment**. Attach the top wire to the posts at least 3 ft. from the ground. Attach the lower wire midway between the ground and the top wire.

4.4.6.3. **Flag Attachment**. Attach flagging to both wire strands midway between each post. Use flagging at least 18 in. long. Tie flagging to the wire using a square knot.

4.4.7. **Sandbags for Erosion Control**. Construct a berm or dam of sandbags that will intercept sediment-laden storm water runoff from disturbed areas, create a retention pond, detain sediment, and release water in sheet flow. Fill each bag with sand so that at least the top 6 in. of the bag is unfilled to allow for proper tying of the open end. Place the sandbags with their tied ends in the same direction. Offset subsequent rows of sandbags 1/2 the length of the preceding row. Place a single layer of sandbags downstream as a secondary debris trap. Place additional sandbags as necessary or as directed for supplementary support to berms or dams of sandbags or earth.

4.4.8. **Temporary Sediment-Control Fence**. Provide temporary sediment-control fence near the downstream perimeter of a disturbed area to intercept sediment from sheet flow. Incorporate the fence into erosion-control measures used to control sediment in areas of higher flow. Install the fence as shown on the plans, as specified in this Section, or as directed.

4.4.8.1. **Installation of Posts**. Embed posts at least 18 in. deep, or adequately anchor, if in rock, with a spacing of 6 to 8 ft. and install on a slight angle toward the runoff source.

4.4.8.2. **Fabric Anchoring**. Dig trenches along the uphill side of the fence to anchor 6 to 8 in. of fabric. Provide a minimum trench cross-section of 6 × 6 in. Place the fabric against the side of the trench and align approximately 2 in. of fabric along the bottom in the upstream direction. Backfill the trench, then hand-tamp.

4.4.8.3. **Fabric and Net Reinforcement Attachment**. Attach the reinforcement to wooden posts with staples, or to steel posts with T-clips, in at least 4 places equally spaced unless otherwise shown on the plans. Sewn

vertical pockets may be used to attach reinforcement to end posts. Fasten the fabric to the top strand of reinforcement by hog rings or cord every 15 in. or less.

4.4.8.4. **Fabric and Net Splices**. Locate splices at a fence post with a minimum lap of 6 in. attached in at least 6 places equally spaced unless otherwise shown on the plans. Do not locate splices in concentrated flow areas.

Requirements for installation of used temporary sediment-control fence include the following:

- fabric with minimal or no visible signs of biodegradation (weak fibers),
- fabric without excessive patching (more than 1 patch every 15 to 20 ft.),
- posts without bends, and
- backing without holes.

4.4.9. **Biodegradable Erosion Control Logs**. Install biodegradable erosion control logs near the downstream perimeter of a disturbed area to intercept sediment from sheet flow. Incorporate the biodegradable erosion control logs into the erosion measures used to control sediment in areas of higher flow. Install, align, and locate the biodegradable erosion control logs as specified below, as shown on the plans, or as directed.

Secure biodegradable erosion control logs in a method adequate to prevent displacement as a result of normal rain events, prevent damage to the logs, and as approved, such that flow is not allowed under the logs. Temporarily removing and replacing biodegradable erosion logs as to facilitate daily work is allowed at the Contractor's expense.

4.4.10. **Vertical Tracking**. Perform vertical tracking on slopes to temporarily stabilize soil. Provide equipment with a track undercarriage capable of producing a linear soil impression measuring a minimum of 12 in. long × 2 to 4 in. wide × 1/2 to 2 in. deep. Do not exceed 12 in. between track impressions. Install continuous linear track impressions where the 12 in. length impressions are perpendicular to the slope. Vertical tracking is required on projects where soil disturbing activities have occurred unless otherwise approved.

4.5. **Monitoring and Documentation**. Monitor the control measures on a daily basis as long as there are BMPs in place and/or soil disturbing activities are evident to ensure compliance with the SWP3 and TPDES General Permit TXR150000. During time suspensions when work is not occurring or contract non-work days, daily inspections are not required unless a rain event has occurred. Monitoring will consist of, but is not limited to, observing, inspecting, and documenting site locations with control measures and discharge points to provide maintenance and inspection of controls as described in the SWP3. Keep written records of daily monitoring. Document in the daily monitoring report the control measure condition, the date of inspection, required corrective actions, responsible person for making the corrections, and the date corrective actions were completed. Maintain records of all monitoring reports at the project site or at an approved place. Provide copies within 7 days. Together, the CRPE and an Engineer's representative will complete the Construction Stage Gate Checklist on a periodic basis as directed.

5. MEASUREMENT

5.1. **Rock Filter Dams**. Installation or removal of rock filter dams will be measured by the foot or by the cubic yard. The measured volume will include sandbags, when used.

5.1.1. **Linear Measurement**. When rock filter dams are measured by the foot, measurement will be along the centerline of the top of the dam.

5.1.2. **Volume Measurement**. When rock filter dams are measured by the cubic yard, measurement will be based on the volume of rock computed by the method of average end areas.

5.1.2.1. **Installation**. Measurement will be made in final position.

5.1.2.2. **Removal**. Measurement will be made at the point of removal.

5.2. **Temporary Pipe Slope Drains**. Temporary pipe slope drains will be measured by the foot.

5.3. **Temporary Paved Flumes**. Temporary paved flumes will be measured by the square yard of surface area. The measured area will include the energy dissipater at the flume outlet.

5.4. **Construction Exits**. Construction exits will be measured by the square yard of surface area.

5.5. **Earthwork for Erosion and Sediment Control**.

5.5.1. **Equipment and Labor Measurement**. Equipment and labor used will be measured by the actual number of hours the equipment is operated and the labor is engaged in the work.

5.5.2. **Volume Measurement**.

5.5.2.1. **In Place**.

5.5.2.1.1. **Excavation**. Excavation will be measured by the cubic yard in its original position and the volume computed by the method of average end areas.

5.5.2.1.2. **Embankment**. Embankment will be measured by the cubic yard in its final position by the method of average end areas. The volume of embankment will be determined between:

- the original ground surfaces or the surface upon that the embankment is to be constructed for the feature and
- the lines, grades and slopes of the accepted embankment for the feature.

5.5.2.2. **In Vehicles**. Excavation and embankment quantities will be combined and paid for under "Earthwork (Erosion and Sediment Control, In Vehicle)." Excavation will be measured by the cubic yard in vehicles at the point of removal. Embankment will be measured by the cubic yard in vehicles measured at the point of delivery. Shrinkage or swelling factors will not be considered in determining the calculated quantities.

5.6. **Construction Perimeter Fence**. Construction perimeter fence will be measured by the foot.

5.7. **Sandbags for Erosion Control**. Sandbags will be measured as each sandbag or by the foot along the top of sandbag berms or dams.

5.8. **Temporary Sediment-Control Fence**. Installation or removal of temporary sediment-control fence will be measured by the foot.

5.9. **Biodegradable Erosion Control Logs**. Installation or removal of biodegradable erosion control logs will be measured by the foot along the centerline of the top of the control logs.

5.10. **Vertical Tracking**. Vertical tracking will not be measured or paid for directly but is considered subsidiary to this Item.

6. PAYMENT

The following will not be paid for directly but are subsidiary to pertinent Items:

- erosion-control measures for Contractor project-specific locations (PSLs) inside and outside the right of way (such as construction and haul roads, field offices, equipment and supply areas, plants, and material sources);
- removal of litter, unless a separate pay item is shown on the plans;
- repair to devices and features damaged by Contractor operations;
- added measures and maintenance needed due to negligence, carelessness, lack of maintenance, and failure to install permanent controls;

- removal and reinstallation of devices and features needed for the convenience of the Contractor;
- finish grading and dressing upon removal of the device; and
- minor adjustments including but not limited to plumbing posts, reattaching fabric, minor grading to maintain slopes on an erosion embankment feature, or moving small numbers of sandbags.

Stabilization of disturbed areas will be paid for under pertinent Items except vertical tacking which is subsidiary.

Furnishing and installing pipe for outfalls associated with sediment traps and ponds will not be paid for directly but is subsidiary to the excavation and embankment under this Item.

6.1. **Rock Filter Dams**. The work performed and materials furnished in accordance with this Item and measured as provided under "Measurement" will be paid for at the unit price bid as follows:

6.1.1. **Installation**. Installation will be paid for as "Rock Filter Dams (Install)" of the type specified. This price is full compensation for furnishing and operating equipment, finish backfill and grading, lacing, proper disposal, labor, materials, tools, and incidentals.

6.1.2. **Removal**. Removal will be paid for as "Rock Filter Dams (Remove)." This price is full compensation for furnishing and operating equipment, proper disposal, labor, materials, tools, and incidentals.

When the Engineer directs that the rock filter dam installation or portions thereof be replaced, payment will be made at the unit price bid for "Rock Filter Dams (Remove)" and for "Rock Filter Dams (Install)" of the type specified. This price is full compensation for furnishing and operating equipment, finish backfill and grading, lacing, proper disposal, labor, materials, tools, and incidentals.

6.2. **Temporary Pipe Slope Drains**. The work performed and materials furnished in accordance with this Item and measured as provided under "Measurement" will be paid for at the unit price bid for "Temporary Pipe Slope Drains" of the size specified. This price is full compensation for furnishing materials, removal and disposal, furnishing and operating equipment, labor, tools, and incidentals.

Removal of temporary pipe slope drains will not be paid for directly but is subsidiary to the installation Item. When the Engineer directs that the pipe slope drain installation or portions thereof be replaced, payment will be made at the unit price bid for "Temporary Pipe Slope Drains" of the size specified, which is full compensation for the removal and reinstallation of the pipe drain.

Earthwork required for the pipe slope drain installation, including construction of the sediment trap, will be measured and paid for under "Earthwork for Erosion and Sediment Control."

Riprap concrete or stone, when used as an energy dissipater or as a stabilized sediment trap, will be measured and paid for in accordance with Item 432, "Riprap."

6.3. **Temporary Paved Flumes**. The work performed and materials furnished in accordance with this Item and measured as provided under "Measurement" will be paid for at the unit price bid for "Temporary Paved Flume (Install)" or "Temporary Paved Flume (Remove)." This price is full compensation for furnishing and placing materials, removal and disposal, equipment, labor, tools, and incidentals.

When the Engineer directs that the paved flume installation or portions thereof be replaced, payment will be made at the unit prices bid for "Temporary Paved Flume (Remove)" and "Temporary Paved Flume (Install)." These prices are full compensation for the removal and replacement of the paved flume and for equipment, labor, tools, and incidentals.

Earthwork required for the paved flume installation, including construction of a sediment trap, will be measured and paid for under "Earthwork for Erosion and Sediment Control."

6.4. **Construction Exits**. Contractor-required construction exits from off right of way locations or on-right of way PSLs will not be paid for directly but are subsidiary to pertinent Items.

The work performed and materials furnished in accordance with this Item and measured as provided under "Measurement" for construction exits needed on right of way access to work areas required by the Department will be paid for at the unit price bid for "Construction Exits (Install)" of the type specified or "Construction Exits (Remove)." This price is full compensation for furnishing and placing materials, excavating, removal and disposal, cleaning vehicles, labor, tools, and incidentals.

When the Engineer directs that a construction exit or portion thereof be removed and replaced, payment will be made at the unit prices bid for "Construction Exit (Remove)" and "Construction Exit (Install)" of the type specified. These prices are full compensation for the removal and replacement of the construction exit and for equipment, labor, tools, and incidentals.

Construction of sediment traps used in conjunction with the construction exit will be measured and paid for under "Earthwork for Erosion and Sediment Control."

6.5. **Earthwork for Erosion and Sediment Control**.

6.5.1. **Initial Earthwork for Erosion and Sediment Control**. The work performed and materials furnished in accordance with this Item and measured as provided under "Measurement" will be paid for at the unit price bid for "Excavation (Erosion and Sediment Control, In Place)," "Embankment (Erosion and Sediment Control, In Place)," "Excavation (Erosion and Sediment Control, In Vehicle)," "Embankment (Erosion and Sediment Control, (In Vehicle)," or "Earthwork (Erosion and Sediment Control, In Vehicle)."

This price is full compensation for excavation and embankment including hauling, disposal of material not used elsewhere on the project; embankments including furnishing material from approved sources and construction of erosion-control features; and equipment, labor, tools, and incidentals.

Sprinkling and rolling required by this Item will not be paid for directly but will be subsidiary to this Item.

6.5.2. **Maintenance Earthwork for Erosion and Sediment Control for Cleaning and Restoring Control Measures**. The work performed and materials furnished in accordance with this Item and measured as provided under "Measurement" will be paid under a Contractor Force Account Item from invoice provided to the Engineer.

This price is full compensation for excavation, embankment, and re-grading including removal of accumulated sediment in various erosion control installations as directed, hauling, and disposal of material not used elsewhere on the project; excavation for construction of erosion-control features; embankments including furnishing material from approved sources and construction of erosion-control features; and equipment, labor, tools, and incidentals.

Earthwork needed to remove and obliterate erosion-control features will not be paid for directly but is subsidiary to pertinent Items unless otherwise shown on the plans.

Sprinkling and rolling required by this Item will not be paid for directly but will be subsidiary to this Item.

6.6. **Construction Perimeter Fence**. The work performed and materials furnished in accordance with this Item and measured as provided under "Measurement" will be paid for at the unit price bid for "Construction Perimeter Fence." This price is full compensation for furnishing and placing the fence; digging, fence posts, wire, and flagging; removal and disposal; and materials, equipment, labor, tools, and incidentals.

Removal of construction perimeter fence will be not be paid for directly but is subsidiary to the installation Item. When the Engineer directs that the perimeter fence installation or portions thereof be removed and replaced, payment will be made at the unit price bid for "Construction Perimeter Fence," which is full compensation for the removal and reinstallation of the construction perimeter fence.

6.7. **Sandbags for Erosion Control**. Sandbags will be paid for at the unit price bid for "Sandbags for Erosion Control" (of the height specified when measurement is by the foot). This price is full compensation for materials, placing sandbags, removal and disposal, equipment, labor, tools, and incidentals.

Removal of sandbags will not be paid for directly but is subsidiary to the installation Item. When the Engineer directs that the sandbag installation or portions thereof be replaced, payment will be made at the unit price bid for "Sandbags for Erosion Control," which is full compensation for the reinstallation of the sandbags.

6.8. **Temporary Sediment-Control Fence**. The work performed and materials furnished in accordance with this Item and measured as provided under "Measurement" will be paid for at the unit price bid as follows:

6.8.1. **Installation**. Installation will be paid for as "Temporary Sediment-Control Fence (Install)." This price is full compensation for furnishing and operating equipment finish backfill and grading, lacing, proper disposal, labor, materials, tools, and incidentals.

6.8.2. **Removal**. Removal will be paid for as "Temporary Sediment-Control Fence (Remove)." This price is full compensation for furnishing and operating equipment, proper disposal, labor, materials, tools, and incidentals.

6.9. **Biodegradable Erosion Control Logs**. The work performed and materials furnished in accordance with this Item and measured as provided under "Measurement" will be paid for at the unit price bid as follows:

6.9.1. **Installation**. Installation will be paid for as "Biodegradable Erosion Control Logs (Install)" of the size specified. This price is full compensation for furnishing and operating equipment finish backfill and grading, staking, proper disposal, labor, materials, tools, and incidentals.

6.9.2. **Removal**. Removal will be paid for as "Biodegradable Erosion Control Logs (Remove)." This price is full compensation for furnishing and operating equipment, proper disposal, labor, materials, tools, and incidentals.

6.10. **Vertical Tracking**. Vertical tracking will not be measured or paid for directly but is considered subsidiary to this Item.

Item 529

Concrete Curb, Gutter, and Combined Curb and Gutter

1. DESCRIPTION

Construct hydraulic cement concrete curb, gutter, and combined curb and gutter.

2. MATERIALS

Furnish materials conforming to:

- Item 360, "Concrete Pavement"
- Item 420, "Concrete Substructures"
- Item 421, "Hydraulic Cement Concrete"
- Item 440, "Reinforcement for Concrete"

Use Class A concrete or material specified on the plans. Use Grade 8 coarse aggregate for extruded Class A concrete. Use other grades if approved.

When approved, use fibers meeting the requirements of DMS-4550, "Fibers for Concrete," to replace reinforcing steel in Class A concrete. Dose fibers in accordance with the Department's MPL of pre-qualified fibers for concrete.

3. CONSTRUCTION

Provide finished work with a well-compacted mass and a surface free from voids and honeycomb, in the required shape, line, and grade. Round exposed edges with an edging tool of the radius shown on the plans. Mix, place, and cure concrete in accordance with Item 420, "Concrete Substructures." Construct joints at locations shown on the plans. Cure for at least 72 hr.

Furnish and place reinforcing steel in accordance with Item 440, "Reinforcement for Concrete."

Set and maintain a guideline that conforms to alignment data shown on the plans, with an outline that conforms to the details shown on the plans. Ensure that changes in curb grade and alignment do not exceed 1/4 in. between any 2 contacts on a 10-ft. straightedge.

3.1. **Conventionally Formed Concrete**. Shape and compact subgrade, foundation, or pavement surface to the line, grade, and cross-section shown on the plans. Lightly sprinkle subgrade or foundation material immediately before concrete placement.

Pour concrete into forms, and strike off with a template 1/4 to 3/8 in. less than the dimensions of the finished curb unless otherwise approved. After initial set, plaster surface with mortar consisting of 1 part hydraulic cement and 2 parts fine aggregate. Brush exposed surfaces to a uniform texture.

Place curbs, gutters, and combined curb and gutters in 50-ft. maximum sections unless otherwise approved.

3.2. **Extruded or Slipformed Concrete**. Hand-tamp and sprinkle subgrade or foundation material before concrete placement. Provide clean surfaces for concrete placement. Coat cleaned surfaces, if required, with approved adhesive or coating at the rate of application shown on the plans or as directed. Place concrete with approved self-propelled equipment.

The forming tube of the extrusion machine or the form of the slipform machine must be easily adjustable vertically during the forward motion of the machine to provide variable heights necessary to conform to the established gradeline.

Attach a pointer or gauge to the machine so that a continual comparison can be made between the extruded or slipform work and the grade guideline. Other methods may be used when approved.

Finish surfaces immediately after extrusion or slipforming.

4. MEASUREMENT

This Item will be measured by the foot.

5. PAYMENT

The work performed and materials furnished in accordance with this Item and measured as provided under "Measurement" will be paid for at the unit price bid for "Concrete Curb," "Concrete Curb (Mono)," or "Concrete Curb and Gutter" of the type specified. This price is full compensation for surface preparation of curb foundation, equipment, labor, materials, tools, and incidentals.

Item 530
Intersections, Driveways, and Turnouts

1. DESCRIPTION

Construct and pave intersections, driveways, and turnouts. Pave existing intersections, driveways, and turnouts.

Intersections are considered to be areas off the travel lanes and shoulders of the Contract highway on the intersecting highway on the state system. The intersecting on-system highway work will be paid for under this Item only when shown on the plans.

Driveways are defined as private (residential or commercial) and public (county road and city street) access areas off the travel lanes and shoulders.

Turnouts include but are not limited to mailbox and litter barrel widenings.

2. MATERIALS

Furnish materials that meet the following:

- Item 247, “Flexible Base”
- Item 260, “Lime Treatment (Road-Mixed)”
- Item 263, “Lime Treatment (Plant-Mixed)”
- Item 275, “Cement Treatment (Road-Mixed)”
- Item 276, “Cement Treatment (Plant-Mixed)”
- Item 292, “Asphalt Treatment (Plant-Mixed)”
- Item 316, “Seal Coat”
- Item 330, “Limestone Rock Asphalt Pavement”
- Item 334, “Hot-Mix Cold-Laid Asphalt Concrete Pavement”
- Item 340, “Dense-Graded Hot-Mix Asphalt (Small Quantity)”
- Item 360, “Concrete Pavement”
- Item 421, “Hydraulic Cement Concrete”
- Item 440, “Reinforcement for Concrete”

3. CONSTRUCTION

Construct and pave intersections, driveways, and turnouts, and pave existing intersections, driveways, and turnouts as shown on the plans or as directed. Place materials in accordance with construction Articles of pertinent Items. Provide uninterrupted access to adjacent property unless otherwise directed. Ensure that abrupt elevation changes in driveway or turnout areas that serve as sidewalks do not exceed 1/4 in. and that the sidewalk area cross slope does not exceed 2%. Ready-mix concrete and hand finishing will be permitted when concrete pavement is specified unless otherwise shown on the plans for intersections.

4. MEASUREMENT

This Item will be measured by the square yard of the final pavement surface.

5. PAYMENT

The work performed and materials furnished in accordance with this Item and measured as provided under "Measurement" will be paid for at the unit price bid for "Intersections," "Driveways," "Turnouts," "Intersections, Driveways, and Turnouts," or "Driveways and Turnouts" of the surface specified.

This price is full compensation for furnishing and operating equipment; excavation and embankment; base and pavement materials; and labor, materials, tools and incidentals. Drainage structures will be measured and paid for in accordance with the pertinent bid items.

Item 531
Sidewalks

1. DESCRIPTION

Construct hydraulic cement concrete sidewalks.

2. MATERIALS

Furnish materials conforming to the following:

- Item 360, “Concrete Pavement”
- Item 420, “Concrete Substructures”
- Item 421, “Hydraulic Cement Concrete”
- Item 440, “Reinforcement for Concrete”

Use Class A concrete unless otherwise shown on the plans. Use Grade 8 course aggregate for extruded Class A concrete. Use other grades if approved.

3. CONSTRUCTION

Shape and compact subgrade, foundation, or pavement surface to the line, grade, and cross-section shown on the plans. Lightly sprinkle subgrade or foundation material immediately before concrete placement. Hand-tamp and sprinkle foundation when placement is directly on subgrade or foundation materials. Remove and dispose of existing concrete in accordance with Item 104, “Removing Concrete.” Provide a clean surface for concrete placement directly on the surface material or pavement.

Mix and place concrete in accordance with the pertinent Items. Hand-finishing is allowed for any method of construction. Finish exposed surfaces to a uniform transverse broom finish surface. Curb ramps must include a detectable warning surface and conform to details shown on the plans. Install joints as shown on the plans. Ensure that abrupt changes in sidewalk elevation do not exceed 1/4 in., sidewalk cross slope does not exceed 2%, curb ramp grade does not exceed 8.3%, and flares adjacent to the ramp do not exceed 10% slope. Ensure that the sidewalk depth and reinforcement are not less than the driveway cross-sectional details shown on the plans where a sidewalk crosses a concrete driveway.

Provide finished work with a well-compacted mass, a surface free from voids and honeycomb, and the required true-to-line shape and grade. Cure for at least 72 hr. in accordance with Item 420, “Concrete Substructures.”

3.1. **Conventionally Formed Concrete**. Provide pre-molded or board expansion joints of the thickness shown on the plans for sidewalk section lengths greater than 8 ft. but less than 40 ft., unless otherwise directed. Terminate workday production at an expansion joint.

3.2. **Extruded or Slipformed Concrete**. Provide any additional surface finishing immediately after extrusion or slipforming as required on the plans. Construct joints at locations as shown on the plans or as directed.

4. MEASUREMENT

Sidewalks will be measured by the square yard of surface area. Curb ramps will be measured by the square yard of surface area or by each. A curb ramp consists of the ramp, landing, adjacent flares or side curb, and detectable warning surface as shown on the plans.

5. PAYMENT

The work performed and materials furnished in accordance with this Item and measured as provided under "Measurement" will be paid for at the unit price bid for "Concrete Sidewalks" of the depth specified and "Curb Ramps" of the type specified. This price is full compensation for surface preparation of sidewalk foundation; materials; removal and disposal of existing concrete; excavation, hauling and disposal of excavated material; drilling and doweling into existing concrete curb, sidewalk, and pavement; repair of adjacent street or pavement structure damaged by these operations; and equipment, labor, materials, tools, and incidentals.

Sidewalks that cross and connect to concrete driveways or turnouts will be measured and paid for in accordance with Item 530, "Intersections, Driveways, and Turnouts."

Item 542
Removing Metal Beam Guard Fence

1. DESCRIPTION

Remove existing metal beam guard fence and store at locations shown on the plans or as directed.

2. CONSTRUCTION

Remove rail elements in original lengths. Remove fittings from the posts and the metal rail and then pull the posts. Do not mar or damage salvageable materials during removal.

Completely remove posts and any concrete or grout backfill surrounding the posts. Furnish backfill material and backfill the hole with material equal in composition and density to the surrounding soil unless otherwise directed.

Cut off or bend down deadman eyebolts to an elevation at least 1 ft. below the new subgrade elevation and leave in place along with the deadman.

Neatly stack salvaged materials to be retained by the Department at designated sites shown on the plans. Properly dispose of unsalvageable materials in conformance with federal, state, and local regulations. Repair or replace Contractor-damaged salvageable material at the Contractor's expense.

3. MEASUREMENT

This Item will be measured by the foot for "Remove Metal Beam Guard Fence" in its original position. Measurement will be made along the face of the rail, in place, including metal beam guard fence transitions, from center-to-center of end posts and from terminal points shown on the plans.

When "Remove Terminal Anchor Section" is specified as a separate bid item, measurement will be made for each removed section. A terminal anchor section consists of one post, one 25-ft. rail element, and associated hardware.

When "Remove Downstream Anchor Terminal" is specified as a separate bid item, measurement will be made for each removed section. Downstream anchor terminal consists of two posts, one section, and associated hardware.

4. PAYMENT

The work performed and measured as provided under "Measurement" will be paid for at the unit price bid for "Remove Metal Beam Guard Fence," "Remove Terminal Anchor Section," and "Remove Downstream Anchor Terminal." This price is full compensation for removing materials; loading, hauling, unloading, and storing or disposal; furnishing backfill material; backfilling postholes; and equipment, labor, tools, and incidentals.

Removal of mow strips or riprap will be paid for separately under the pertinent Items.

Removal of curb associated with the metal beam guard fence transitions will not be paid for directly, but will be subsidiary to this Item.

Item 610
Roadway Illumination Assemblies

1. DESCRIPTION

1.1. **Installation**. Furnish, fabricate, and install roadway illumination assemblies.

1.2. **Relocation**. Remove and relocate existing roadway illumination assemblies.

1.3. **Removal**. Remove existing roadway illumination assemblies.

1.4. **Replace Luminaires (Light Fixtures)**. Remove and replace existing luminaires.

2. MATERIALS

Provide new materials as shown on the plans and in accordance with this Item and the following Items.

- Item 416, "Drilled Shaft Foundations"
- Item 421, "Hydraulic Cement Concrete"
- Item 441, "Steel Structures"
- Item 442, "Metal for Structures"
- Item 445, "Galvanizing"
- Item 449, "Anchor Bolts"
- Item 616, "Performance Testing of Lighting Systems"
- Item 618, "Conduit"
- Item 620, "Electrical Conductors"

Fabrication plants that produce roadway illumination poles, including luminaire arms, must be approved in accordance with DMS-7380, "Steel Non-Bridge Member Fabrication Plant Qualification." This includes fabricators of aluminum roadway illumination poles and luminaire arms. The Materials and Tests Division maintains a list of approved fabrication plants of roadway illumination poles.

Furnish light fixtures from new materials that are in accordance with DMS-11010, "Roadway Illumination Light Fixtures."

Provide prequalified light fixtures from the Department's MPL. When required by the Engineer, notify the Department in writing of selected materials from the MPL intended for use on each project.

Do not provide shop drawings for complete assemblies that are fabricated in accordance with this Item and the details shown on the plans. Electronically submit shop drawings in accordance with Item 441 for optional multi-sided steel pole designs; optional aluminum pole designs; and non-standard designs, required when basic wind speeds or pole base mounting heights at the installation locations exceed those shown in the Roadway Illumination Pole (RIP) standard. Manufacturers may request that the Department add their submitted shop drawings and design calculations to a pre-approved list of optional and non-standard pole designs, maintained by the Traffic Safety Division.

Hot-dip galvanize fabricated pole sections and associated parts in accordance with Item 445. Provide punched, drilled, or mechanically guided thermal-cut holes in steel parts or members, when allowed, before galvanizing. Mechanically guided thermal-cut hole quality will be in accordance with Item 445.

When shown on the plans, paint galvanized poles in accordance with Item 445.

3. CONSTRUCTION

Perform work as shown on the plans and in accordance with this Item. Permanently mark roadway illumination pole base plates, at a visible location when erected, with the fabrication plant's insignia or trademark.

Use established industry and utility safety practices when installing, relocating, or removing poles or luminaires located near overhead or underground utilities. Consult with the appropriate utility company before beginning work.

Prevent scarring or marring of the poles, luminaire arms, and luminaires. Replace damaged components. Repair damaged galvanizing in accordance with Section 445.3.4., "Repairs." Repair damaged painted areas of a roadway illumination assembly in accordance with Item 441 or Item 445.

Stake, install, and align each roadway illumination assembly as shown on the plans.

The Engineer may shift an assembly's location, if necessary, to secure a more desirable location or avoid conflict with utilities.

Construct foundations for roadway illumination assemblies in accordance with Item 416 and as shown on the plans.

3.1. **Installation**. Furnish and install roadway illumination assembly components as shown on the plans. Do not use screw-in type foundations. Install anchor bolts and coat anchor bolt threads in accordance with Item 449. Erect structures after foundation concrete has attained its design strength as shown on the plans and in accordance with Item 421. Tighten anchor bolts for poles with shoe bases and concrete traffic barrier base poles in accordance with Item 449. Do not place grout between base plate and foundation. Test installed roadway illumination assemblies in accordance with Item 616.

3.2. **Relocation**. Relocate roadway illumination assembly components as shown on the plans. Do not use screw-in type foundations. Install existing structures on new foundations in accordance with Section 610.3.1., "Installation." Do not place grout between base plate and foundation. Test installed roadway illumination assemblies in accordance with Item 616.

Disconnect and remove conductors from abandoned circuits. Remove abandoned conduit or ducts to a point 6 in. below final grade. Reconnect conduit and ducts to be reused. Replace damaged conduit and ducts. Replace conductors.

Unless otherwise shown on the plans, remove abandoned concrete foundations and replace surfacing in accordance with Section 610.3.3., "Removal." Do not remove existing concrete bridge lighting brackets.

Furnish and install new internal conductors, fused and unfused connectors, and lamps if present. Clean optical assembly. Furnish and install new transformer bases that meet AASHTO and plan requirements when relocating transformer base poles. Destroy existing transformer bases to prevent reuse.

Accept ownership and dispose of unsalvageable materials in conformance with federal, state, and local regulations.

3.3. **Removal**. Remove roadway illumination assembly components in conformance with established industry and utility safety practices.

Remove transformer bases from transformer base poles. Destroy removed transformer bases to prevent reuse. Remove luminaires and luminaire arms from the pole shaft. Stockpile pole shafts, luminaire arms, and assembly hardware at a location designated by the Department. Pole shafts, luminaire arms, and assembly hardware will remain Department property unless otherwise shown on the plans or directed.

Disconnect and remove conductors from abandoned circuits. Remove abandoned conduit and ducts to a point 6 in. below final grade.

Unless otherwise shown on the plans, remove abandoned concrete foundations, including steel, to a point 2 ft. below final grade. Backfill the hole with material that is equal in composition and density to the surrounding area. Replace surfacing material with similar material to an equivalent condition. Do not remove existing concrete bridge lighting brackets.

Accept ownership and dispose of unsalvageable materials in conformance with federal, state, and local regulations.

3.4. **Replace Luminaires**. Remove existing luminaires. Furnish and install luminaires as shown on the plans. Replace conductors and breakaway fuse holders when necessary. Test installed luminaires in accordance with Item 616.

4. MEASUREMENT

This Item will be measured as each roadway illumination assembly installed, relocated, or removed, or by each luminaire replaced.

5. PAYMENT

The work performed and materials furnished in accordance with this Item and measured as provided under "Measurement" will be paid for at the unit price bid for "Install Roadway Illumination Assemblies" of the types specified, "Relocate Roadway Illumination Assemblies" of the types specified, "Remove Roadway Illumination Assemblies" of the types specified, or "Replace Luminaires" of the types specified. The Department will pay for electrical energy consumed by the lighting system.

New drilled shaft foundations will be paid for under Item 416. New concrete riprap placed around foundations will be paid for under Item 432, "Riprap." New conduit will be paid for under Item 618. New conductors, except the conductors internal to the pole, will be paid for under Item 620. New duct cable will be paid for under Special Specification, "Duct Cable." New ground boxes will be paid for under Item 624, "Ground Boxes." New electrical services will be paid for under Item 628, "Electrical Services."

5.1. **Installation**. This price is full compensation for furnishing, installing, and testing luminaires; furnishing and installing lamps, luminaire arms, brackets, poles, anchor bolt assemblies, templates, internal conductors, and connections; conducting system performance testing; and materials, equipment, labor, tools, and incidentals.

5.2. **Relocation**. This price is full compensation for salvaging and relocating the existing conduit and duct; removing existing foundations, backfilling, and surface placement; removing, erecting, connecting, and testing illumination assemblies; removing existing conductors; furnishing and installing new anchor bolt assemblies, templates, transformer bases, lamps, connections, and conductors; replacing damaged components; disposing of unsalvageable materials; and materials, equipment, labor, tools, and incidentals.

5.3. **Removal**. This price is full compensation for removing, salvaging, disassembling, and stockpiling illumination assemblies; salvaging and relocating existing conduit; removing existing foundations; backfilling and surface placement; splicing existing conductors; disposing of unsalvageable materials; and materials, equipment, labor, tools, and incidentals.

5.4. **Replace Luminaires**. This price is full compensation for removing, salvaging, disassembling, and stockpiling existing luminaires; furnishing and installing new luminaires, connections, and conductors internal to the pole; replacing damaged components; disposing of unsalvageable materials; and materials, equipment, labor, tools, and incidentals.

Item 616
Performance Testing of Lighting Systems

1. DESCRIPTION

Test the performance of roadway and high mast lighting systems.

2. CONSTRUCTION

Perform tests on the lighting system and tests required by Item 618, “Conduit”; Item 620, “Electrical Conductors”; and Special Specification, “Duct Cable.” Ensure all components are properly installed.

Place the lighting system in operation for a 14-day test period. Burn the lighting system steadily for 48 hr., then cycle the photocell or other control device for 12 days.

Pass a 14-day performance test of the lighting system.

Replace materials that are damaged or have failed before acceptance. Damaged illumination assemblies, except those damaged by the Contractor, and minor failures of lamps, ballasts, and photocells are not cause for modifying or restarting the performance test.

Replace failed or damaged existing lighting system components when caused by the Contractor.

The Department will relieve the Contractor of maintenance responsibilities upon passing a 14-day performance test of the lighting system.

3. MEASUREMENT AND PAYMENT

The work performed, materials furnished, equipment, labor, tools, and incidentals will not be measured or paid for directly, but will be subsidiary to pertinent Items. The Department will pay for electrical energy consumed by the lighting system.

Item 618
Conduit

1. DESCRIPTION

Furnish and install conduit; prepare existing conduit.

2. MATERIALS

Provide new materials that comply with the details shown on the plans, the requirements of this Item, and the pertinent requirements of the following Items.

- Item 400, “Excavation and Backfill for Structures”
- Item 476, “Jacking, Boring, or Tunneling Pipe or Box”

When specified on the plans, provide:

- rigid metal conduit (RMC),
- polyvinyl chloride (PVC) conduit,
- high density polyethylene (HDPE) conduit,
- liquid-tight flexible metal conduit (LFMC), or
- liquid-tight flexible nonmetallic conduit (LFNC).

Furnish conduit from new materials in accordance with DMS-11030, “Conduit.”

Provide prequalified conduit from the Department’s MPL. When required by the Engineer, notify the Department in writing of selected materials from the MPL intended for use on each project.

Provide other types of conduit not on the MPL that comply with the details shown on the plans and the NEC. Fabricate fittings such as junction boxes and expansion joints from a material like the connecting conduit, unless otherwise shown on the plans. Use watertight fittings. Do not use set screw fittings. Steel compression fittings are permissible. When using HDPE conduit, provide fittings that are UL-listed as electrical conduit connectors, or connect conduit by thermal fusing with an electrically heated welding method.

Use red 3-in. 4-mil polyethylene underground warning tape that continuously states, “Caution Buried Electrical Line Below.”

3. CONSTRUCTION

Perform work as shown on the plans and in accordance with this Item.

Use established industry and utility safety practices when installing conduit located near underground utilities. Consult with the appropriate utility company before beginning work.

3.1. **Installation of Conduit**. Install conduit at least 18 in. deep below finished grade to top of conduit unless otherwise shown on the plans. Meet the requirements of the NEC when installing conduit. Secure and support conduit placed for concrete encasement such that the alignment will not be disturbed during placement of the concrete. Cap ends of conduit and close box openings before concrete is placed.

Ream conduit to remove burrs and sharp edges. Use a standard conduit cutting die with a 3/4-in. taper per foot when conduit is threaded in the field. Galvanize or paint threads in accordance with Item 445,

"Galvanizing." Fasten conduit placed on structures with conduit straps or hangers as shown on the plans or as directed. Fasten conduit within 3 ft. of each box or fitting and at other locations shown on the plans or as directed. Use two-hole type clamps for 2-in. diameter or larger conduit.

Fit PVC and HDPE conduit terminations with bushings or bell ends. Fit metal conduit terminations with a grounding type bushing, except conduit used for duct cable casing that does not terminate in a ground box and is not exposed at any point. Conduit terminating in threaded bossed fittings does not need a bushing. Before installation of conductors or final acceptance, pull a properly sized mandrel or piston through the conduit to ensure that it is free of obstruction. Cap or plug empty conduit placed for future use.

Perform trench excavation and backfilling as shown on the plans or as directed, and in accordance with Item 400. Excavation and backfilling will be subsidiary to the installation of the conduit.

Jack and bore as shown on the plans or as directed, and in accordance with Item 476.

Place warning tape approximately 10 in. above trenched conduit. Where existing surfacing is removed for placing conduit, repair by backfilling with material equal in composition and density to the surrounding areas and by replacing any removed surfacing, such as asphalt pavement or concrete riprap, with like material to equivalent condition. Mark conduit locations as directed.

3.2. **Preparation of Conduit**. Pull a mandrel through empty conduits. Use a mandrel with a diameter greater than 70% of the inside diameter of the conduit and 2-in. length. Repair or replace conduit runs that will not allow passage of the mandrel. Replace conduit deemed impractical to repair or that remains unsuitable in accordance with Item 618, "Conduit." Clean the conduit by pulling a rubber swab slightly larger in diameter than the conduit.

Blow compressed air through conduits that contain wires. Remove debris from the conduit by pushing a fish tape through the conduit. Do not use water to clear debris. Retest the conduit by blowing compressed air.

Install one pull cord in each conduit for use in installing the conductors, cables, or innerduct.

4. MEASUREMENT

This Item will be measured by the foot of conduit installed, or by the foot of conduit cleared, tested, replaced, and repaired.

This is a plans quantity measurement Item. The quantity to be paid is the quantity shown in the proposal, unless modified by Article 9.2., "Plans Quantity Measurement." Additional measurements or calculations will be made if adjustments of quantities are required.

5. PAYMENT

5.1. **Installation of Conduit**. The work performed and materials furnished in accordance with this Item and measured as provided under "Measurement" will be paid for at the unit price bid for "Conduit" of the type and size specified and the installation method specified as applicable, or for "Conduit (Prepare)." This price is full compensation for furnishing and installing conduit; cleaning and testing conduit; hanging, strapping, jacking, boring, tunneling, trenching, and furnishing and placing backfill; encasing in steel or concrete; replacing pavement structure, sod, riprap, curbs, or other surface; marking location of conduit (when required); furnishing and installing fittings, junction boxes, and expansion joints; and materials, equipment, labor, tools, and incidentals.

Flexible conduit will not be paid for directly, but will be subsidiary to pertinent Items. Unless otherwise shown on the plans, no payment will be allowed under this Item for conduit used on electrical services or in foundations.

Repair of existing conduit will be paid for by the Department in accordance with Article 9.7., “Payment for Extra Work and Force Account Method.”

Item 620
Electrical Conductors

1. DESCRIPTION

Furnish and install electrical conductors, except conductors specifically covered by other Items.

2. MATERIALS

Provide new materials that comply with the details shown on the plans and the requirements of this Item. Use stranded insulated conductors that are rated for 600V, approved for wet locations, and marked in conformance with UL, NEC, and Canadian Standards Association (CSA) requirements. Furnish electrical conductors in accordance with DMS-11040, "Electrical Conductors."

Provide pre-qualified electrical conductors from the Department's MPL. When required by the Engineer, notify the Department in writing of selected materials from the MPL intended for use on each project.

Ensure all grounding conductors Size 8 AWG and larger are stranded, except for the grounding electrode conductor at the electrical service, which will be a 6-AWG solid conductor.

Use white insulation for grounded (neutral) conductors, except grounded conductors Size 4 AWG and larger may be black with white tape marking at every accessible location. Do not use white insulation or marking for any other conductor except control wiring specifically shown on the plans.

Ensure insulated grounding conductors are green, except insulated grounding conductors Size 4 AWG and larger may be black with green tape marking at every accessible location. Do not use green insulation or marking for any other conductor except control wiring specifically shown on the plans.

3. CONSTRUCTION

Perform work as shown on the plans and in accordance with this Item.

Splice conductors only in junction boxes, ground boxes, and transformer bases, and in poles and structures at the handholes. Splice as shown on the plans. Do not exceed the manufacturer's recommended pulling tension. Use lubricant as recommended by the manufacturer. Install conductors in accordance with the NEC.

Test insulation resistance on the conductors before making final connections and ensure each continuous run of insulated conductor has a minimum direct-current (DC) resistance of 5 megohms (MΩ) when tested at 1,000V DC. The Engineer may require verification testing of all or part of the conductor system. The Engineer will witness these verification tests. Replace conductors exhibiting an insulation resistance of less than 5 MΩ at no additional cost to the Department.

4. MEASUREMENT

This Item will be measured by the foot of each single conductor.

This is a plans quantity measurement Item. The quantity to be paid is the quantity shown in the proposal, unless modified by Article 9.2., "Plans Quantity Measurement." Additional measurements or calculations will be made if adjustments of quantities are required.

5. PAYMENT

The work performed and materials furnished in accordance with this Item and measured as provided under "Measurement" will be paid for at the unit price bid for "Electrical Conductors" of the types and sizes specified. This price is full compensation for furnishing, installing, and testing electrical conductors; furnishing and installing breakaway connectors; and materials, equipment, labor, tools, and incidentals, with the following exceptions:

- conductors used in connecting the components of electrical services will be paid for under Item 628, "Electrical Services";
- conductors inside roadway illumination assemblies will be paid for under Item 610, "Roadway Illumination Assemblies";
- conductors inside traffic signal pole assemblies will be paid for under this Item; and
- conductors used for internal wiring of equipment will not be paid for directly, but will be subsidiary to pertinent Items.

Item 624
Ground Boxes

1. DESCRIPTION

1.1. **Installation**. Construct, furnish, and install ground boxes complete with lids.

1.2. **Removal**. Remove existing ground boxes.

2. MATERIALS

Provide new materials that comply with the details shown on the plans, the requirements of this Item, and the pertinent requirements of the following Items.

- Item 420, “Concrete Substructures”
- Item 421, “Hydraulic Cement Concrete”
- Item 432, “Riprap”
- Item 440, “Reinforcement for Concrete”
- Item 618, “Conduit”
- Item 620, “Electrical Conductors”

Provide fabricated precast polymer concrete ground boxes in accordance with DMS-11070, “Ground Boxes.” Provide pre-qualified ground boxes from the Department’s MPL. When required by the Engineer, notify the Department in writing of selected materials from the MPL intended for use on each project.

Provide other precast or cast-in-place ground boxes that comply with the details shown on the plans.

3. CONSTRUCTION

Perform work as shown on the plans and in accordance with this Item.

Use established industry and utility safety practices when installing or removing ground boxes located near underground utilities. Consult with the appropriate utility company before beginning work.

3.1. **Installation**. Fabricate and install ground boxes as shown on the plans. Install ground box to approved line and grade.

Construct precast and cast-in-place concrete ground boxes in accordance with Item 420 and Item 440.

Construct concrete aprons as shown on the plans and in accordance with Item 432 and Item 440.

3.2. **Removal**. Remove existing ground boxes and concrete aprons to at least 6 in. below the conduit level. Uncover conduit to a sufficient distance so that 90° bends can be removed and conduit reconnected. Clean the conduit in accordance with Item 618. Replace conduit within 5 ft. of the ground box. Remove old conductors and install new conductors as shown on the plans. Backfill area with material equal in composition and density to the surrounding area. Replace surfacing material with similar material to an equivalent condition.

4. MEASUREMENT

This Item will be measured by each ground box installed complete in place or each ground box removed.

5. PAYMENT

The work performed and materials furnished in accordance with this Item and measured as provided under "Measurement" will be paid for at the unit price bid for "Ground Box" of the types and sizes specified and for "Remove Ground Box."

5.1. **Installation**. This price is full compensation for excavating, backfilling, and aggregate; constructing, furnishing, and installing ground boxes and concrete aprons; and material, equipment, labor, tools, and incidentals. All wiring connections required inside the ground box will be subsidiary to this Item. Conduit will be paid for under Item 618. Electrical conductors will be paid for under Item 620.

5.2. **Removal**. This price is full compensation for removing and disassembling ground boxes and concrete aprons; excavating, backfilling, and surface placement; removing old conductors; disposal of unsalvageable materials; and materials, equipment, labor, tools, and incidentals. Cleaning of conduit will be subsidiary to this Item. Conduit replaced within 5 ft. of the ground box will be subsidiary to this Item. Additional conduit will be paid for under Item 618. Installation of conductors will be paid for under Item 620.

Item 628
Electrical Services

1. DESCRIPTION

- **Installation**. Furnish and install electrical services.
- **Relocation**. Relocate existing electrical services.
- **Removal**. Remove existing electrical services.

2. MATERIALS

Provide materials that comply with the details shown on the plans, the requirements of this Item, and the pertinent requirements of the following Items.

- Item 441, "Steel Structures"
- Item 445, "Galvanizing"
- Item 449, "Anchor Bolts"
- Item 618, "Conduit"
- Item 620, "Electrical Conductors"
- Item 627, "Treated Timber Poles"
- Item 656, "Foundations for Traffic Control Devices"

For the installation of electrical services, use new materials that meet the requirements of the NEC, UL, the Canadian Standards Association (CSA), and NEMA, and are in accordance with DMS-11080, "Electrical Services."

Provide pre-qualified electrical services from the Department's MPL. When required, notify the Department in writing of selected materials from the MPL intended for use on each project.

3. CONSTRUCTION

Perform work as shown on the plans and in accordance with this Item. Use established industry and utility safety practices when installing, relocating, or removing electrical services located near overhead or underground utilities. Consult with the appropriate utility company before beginning work.

3.1. **Installation**. Furnish and install electrical service equipment. Ensure components of the electrical service meet the requirements of the Electrical Detail Standards. Install the electrical equipment in accordance with the NEC and in conformance with local utility company requirements. Coordinate the utility companies' work for providing service.

3.2. **Relocation**. Coordinate relocation with the appropriate utility company before beginning work. Remove existing electrical service in accordance with Section 628.3.3., "Removal." Reinstall existing electrical service in accordance with Section 628.3.1., "Installation." Replace or add circuit breakers as shown on the plans.

3.3. **Removal**. Coordinate removal with the appropriate utility company before beginning work. Before the removal of the electrical service, disconnect and isolate any existing electrical service equipment in conformance with the utility company's requirements.

Remove existing electrical service support at least 2 ft. below finished grade unless otherwise shown on the plans. Repair the remaining hole by backfilling with material equal in composition and density to the

surrounding area. Replace any surfacing, such as asphalt pavement or concrete riprap, with like material to equivalent condition.

Disconnect and remove conductors from the conduit. Cut off and cap all protruding conduit 6 in. below finished grade. Abandoned conduit need not be removed unless otherwise shown on the plans.

Reconnect conductors and conduit to be reused when shown on the plans. Make all splices in ground boxes unless otherwise shown on the plans.

Accept ownership and dispose of unsalvageable materials in conformance with federal, state, and local regulations.

4. MEASUREMENT

This Item will be measured by each electrical service installed, relocated, or removed.

5. PAYMENT

The work performed and materials furnished in accordance with this Item and measured as provided under "Measurement" will be paid for at the unit price bid for "Electrical Services" of the types specified, "Relocate Electrical Services," or "Remove Electrical Services."

Costs for utility-owned power line extensions, connection charges, meter charges, consumption charges, and other charges will be paid for by the Department. The Department will reimburse the Contractor the amount billed by the utility, plus an additional 5% of the invoice cost will be paid for labor, equipment, administrative costs, superintendence, and profit.

Applications for a permanent utility service will designate the Department as the service owner unless otherwise shown in the plans.

5.1. **Installation**. This price is full compensation for paying all fees, testing, permits, utility company inspections, connection or meter charges, and other costs; making arrangements with the utility company for all work and materials provided by the utility company; furnishing, installing, and connecting all components, including poles, service supports, foundations, anchor bolts, riprap, enclosures, switches, breakers, service conduit (from the service equipment, including the elbow below ground), fittings, service conductors (from the service equipment, including the elbow below ground), brackets, bolts, hangers, and hardware; and materials, equipment, labor, tools, and incidentals.

5.2. **Relocation**. This price is full compensation for disconnecting and isolating the existing electrical service; relocating the service supports; new service support foundation; backfilling holes; paying all fees, testing, permits, utility company inspections, connection or meter charges, and other costs; making arrangements with the utility company for all work and materials provided by the utility company; removing, disconnecting, installing, and connecting all components, including poles, service supports, foundations, anchor bolts, riprap, enclosures, switches, breakers, service conduit (from the service equipment, including the elbow below ground), fittings, service conductors (from the service equipment, including the elbow below ground), brackets, bolts, hangers, and hardware; and materials, equipment, labor, tools, and incidentals.

5.3. **Removal**. This price is full compensation for coordinating with the utility company to disconnect and isolate the electrical service; removing the service supports; backfilling holes; and materials, equipment, labor, tools, and incidentals.

Item 636
Signs

1. DESCRIPTION

- **Installation**. Furnish, fabricate, and erect aluminum signs. Sign supports are provided for under other Items.
- **Replacement**. Replace existing signs on existing or replaced sign supports.

2. MATERIALS

2.1. **Signs**. Furnish completed signs in accordance with DMS-8301, "Highway Sign Fabrication."

2.2. **Hardware**. Use galvanized steel, stainless steel, or dichromate-sealed aluminum for bolts, nuts, washers, lock washers, screws, and other sign assembly hardware. Use plastic or nylon washers when in direct contact with the reflective sheeting. Furnish steel or aluminum products in accordance with DMS-7120, "Sign Hardware."

When dissimilar metals are used, select or insulate metals to prevent corrosion.

2.3. **Sign Identification Decals**. Furnish materials that meet the requirements of DMS-8315, "Sign Identification Decals."

3. CONSTRUCTION

3.1. **Decals**. The sign fabricator must code the sign identification decals by punching out the appropriate letter or digits for Rows 1–7 as shown in Figure 1 and Table 1.

Rows 8–12 (Installation Date) are only for coding by the Engineer at their discretion.

Affix the decal to lower left corner of the sign back in an upright position.

Figure 1 shows the sign identification decal. The numbers to the far right as shown in Figure 1 are reference row numbers for Table 1 and are not part of the decal. Table 1 describes the information required in each row of the decal.

Figure 1
Decal Design (Row Numbers Explained in Table 1)

Table 1
Decal Description

Row Explanation
1—Sign fabricator
2—Month fabricated
3—First 3 digits of year fabricated
4—Last digit of year fabricated
5—Manufacturer of the sheeting applied to the substrate
6—Film (colored transparent or non-reflective black) manufacturer
7—Manufacturer of the sheeting for the legend
8—Tens digit of date installed[1]
9—Ones digit of date installed[1]
10—Month installed[1]
11—First 3 digits of year installed[1]
12—Last digit of year installed[1]
13—Name of sign fabricator and physical location of sign shop

1. Only for coding by the Engineer at their discretion.

Code the decal by punching out the following:

- "C" if fabricated by a commercial sign fabricator or "T" if fabricated by the Department or the Texas Department of Criminal Justice,
- month fabricated,
- first three digits of the year fabricated,
- fourth digit of the year fabricated, and
- sheeting and film manufacturers. (Codes for these manufacturers are located on the Department's MPL.)

3.2. **Storage and Handling**. Ship, handle, and store completed sign blanks and completed signs so that corners, edges, and faces are not damaged. Damage to the sign face that is not visible when viewed at a distance of 50 ft., night or day, will be acceptable. Replace unacceptable signs.

Store all finished signs off the ground and in a vertical position until erected. Store finished sheet aluminum substrate signs in a weatherproof building. Extruded aluminum substrate signs may be stored outside.

Stockpile salvageable materials at the location shown on the plans or as directed. Accept ownership and dispose of unsalvageable materials in conformance with federal, state, and local regulations.

3.3. **Cleaning**. Wash completed signs in the fabrication shop using a biodegradable cleaning solution acceptable to the manufacturers of the sheeting, colored transparent film, and screen ink to remove grease, oil, dirt, smears, streaks, finger marks, and other foreign material. Wash again before final inspection after erection.

3.4. **Installation**. Install signs as shown on the plans or as directed.

3.5. **Replacement**. Remove the existing signs from the existing or replaced supports and replace with new signs, including mounting hardware, as shown on the plans. At the Engineer's discretion, existing galvanized mounting hardware can be reused if it was not damaged during removal of existing sign.

3.6. **Documentation**. Provide a notarized original of the project-specific Signing Material Statement (Form 2273), from the sign fabricator, along with attached copies of pertinent material certifications for verification of compliance.

4. MEASUREMENT

Signs installed or replaced will be measured by the square foot of the sign face.

This is a plans quantity measurement Item. The quantity to be paid is the quantity shown in the proposal, unless modified by Article 9.2., "Plans Quantity Measurement." Additional measurements or calculations will be made if adjustments of quantities are required.

5. PAYMENT

The work performed and materials furnished in accordance with this Item and measured as provided under "Measurement" will be paid for at the unit price bid for "Aluminum Signs," or "Replacing Existing Aluminum Signs," of the type specified.

5.1. **Installation**. This price is full compensation for furnishing and installing new signs and hardware; fabrication of sign panels; treatment of sign panels required before application of the background materials; application of the background materials and messages to the sign panels; furnishing and fabricating frames, wind beams, and stiffeners; furnishing bolts, rivets, screws, fasteners, clamps, brackets, and sign support connections; assembling and erecting the signs; preparing and cleaning the signs; and materials, equipment, labor, tools, and incidentals.

5.2. **Replacement**. This price is full compensation for furnishing and installing new aluminum signs and hardware; reusing existing hardware (when applicable); removal of existing signs; fabrication of sign panels; treatment of sign panels required before application of the background materials; application of the background materials and messages to the sign panels; furnishing and fabricating frames, wind beams, and stiffeners; furnishing bolts, rivets, screws, fasteners, clamps, brackets, and sign support connections; assembling and erecting the signs; preparing and cleaning the signs; salvaging and disposing of unsalvageable materials; and materials, equipment, labor, tools, and incidentals.

Item 658
Delineator and Object Marker Assemblies

1. DESCRIPTION

- **Installation**. Install delineator or object marker assembly.
- **Removal**. Remove delineator or object marker assembly.
- **Replacement**. Remove existing delineator or object marker assembly and replace with new delineator or object marker assembly.

2. MATERIALS

Furnish only new materials as shown on the plans unless otherwise directed. The Engineer will sample in accordance with Tex-725-I or Tex-737-I.

2.1. **Delineator and Object Marker Assemblies**. Fabricate in accordance with the following.

- DMS-8600, "Delineators, Object Markers, and Barrier Reflectors"
- DMS-4400, "Flexible Delineator and Object Marker Posts (Embedded and Surface-Mount Types)"

2.2. **Wing Channel Post**. Furnish material of the size shown on the plans. Supply a notarized original of Form D-9-USA-1 (Department Form 1818) with supporting mill test report certifying that the base metal is in accordance with the following.

- ASTM A1011, SS Grade 50
- ASTM A499

Galvanize material in accordance with Item 445, "Galvanizing."

3. CONSTRUCTION

3.1. **Installation**. Locate delineators, object markers, and barrier reflectors as shown on the plans or as directed and install in conformance with the manufacturer's recommendations.

Install winged channel post and flexible delineator posts to allow the reflector units and reflectorized panels to be installed at the specified height and orientation. Align post as shown or as directed.

Drive post plumb using a driving cap to prevent visible cross-section dimension distortion. Drill or drive a pilot hole when post cannot be driven without visibly distorting the cross-section dimension. Backfill pilot holes thoroughly by tamping in 6-in. lifts to grade.

Repair damaged galvanizing in accordance with Section 445.3.4., "Repairs." Install reflector units on wing channel posts after the posts have been erected.

3.2. **Removal**. Remove post assemblies without damaging materials, and salvage when indicated on the plans. Remove post to a minimum of 6 in. below finished grade. Stockpile salvaged materials at the location shown on the plans or as directed. Accept ownership of unsalvageable materials and dispose of them in conformance with federal, state, and local requirements.

3.3. **Replacement**. Remove existing delineator or object marker assembly in accordance with Section 658.3.2., "Removal," and replace with new delineator or object marker assembly in accordance with Section 658.3.1., "Installation."

4. MEASUREMENT

Installation will be measured by each delineator or object marker assembly installed, removed, or replaced.

This is a plans quantity measurement Item. The quantity to be paid is the quantity shown in the proposal, unless modified by Article 9.2., "Plans Quantity Measurement." Additional measurements or calculations will be made if adjustments of quantities are required.

5. PAYMENT

The work performed and materials furnished in accordance with this Item and measured as provided under "Measurement" will be paid for at the unit price bid for "Install Delineator Assemblies," "Install Object Marker Assemblies," "Install High Speed/High Impact Assemblies," "Replace Delineator Assemblies," or "Replace Object Marker Assemblies" of the types and colors specified, and for "Remove Delineator or Object Marker Assemblies."

5.1. **Installation**. This price is full compensation for furnishing and fabricating when required; installing and mounting the delineator or object marker assemblies, including posts, adhesive or pads for surface mount assemblies, back plates, reflector units, fastening plates, brackets, bolts, nuts, and washers; and materials, equipment, labor, tools, and incidentals.

5.2. **Removal**. This price is full compensation for removal and disposal of delineator and object marker assemblies and for materials, equipment, labor, tools, and incidentals.

5.3. **Replacement**. This price is full compensation for removal and disposal of existing delineator and object marker assemblies; furnishing, installing, and mounting new delineator or object marker assemblies, including posts, adhesive or pads for surface mount assemblies, back plates, reflector units, fastening plates, brackets, bolts, nuts, and washers; and materials, equipment, labor, tools, and incidentals.

Item 666
Retroreflectorized Pavement Markings

1. DESCRIPTION

Furnish and place retroreflectorized or non-retroreflectorized (shadow) pavement markings.

2. MATERIALS

2.1. **Type I Marking Materials (Thermoplastic)**. Furnish in accordance with DMS-8220, "Hot Applied Thermoplastic."

2.2. **Type II Marking Materials (Traffic Paint)**. Furnish in accordance with DMS-8200, "Traffic Paint."

2.3. **Type III Marking Materials (Multipolymer)**. Furnish in accordance with DMS-8230, "Multipolymer Pavement Markings."

2.4. **Glass Traffic Beads**. For Type I, Type II, and Type III pavement markings, furnish drop-on glass beads in accordance with DMS-8290, "Glass Traffic Beads," to meet the specified retroreflective performance requirements for all permanent, longitudinal pavement markings.

2.5. **Labeling**. To sample material, use clearly marked containers that indicate material type, color, mass, manufacturer, and batch number.

3. EQUIPMENT

3.1. **General Requirements**. Use pavement marking equipment that:

- is maintained in satisfactory condition;
- meets or exceeds the requirements of the National Board of Fire Underwriters and the Texas Railroad Commission for this application;
- applies beads by an automatic bead dispenser attached to the pavement marking equipment such that the beads are dispensed uniformly and almost instantly upon the marking as the marking is being applied to the road surface. The bead dispenser must have an automatic cut-off control, synchronized with the cut-off of the pavement marking equipment;
- has an automatic cut-off device with manual operating capabilities to provide clean marking with square ends;
- can produce the types and shapes of profiles specified; and
- can provide continuous mixing and agitation of the pavement marking material. The use of pans, aprons, or similar appliances that the die overruns will not be permitted for longitudinal striping applications exceeding a project length of 2,000 ft., unless otherwise approved.

When placing multipolymer pavement markings (MPM), use equipment designed for pavement preparation and the application of selected type of MPM material.

Provide a handheld thermometer capable of measuring the temperature between 300°F and 450°F to measure the temperature of marking material in the field, when applying Type I material.

3.1.1. **Measuring Retroreflectivity**. Use a mobile retroreflectometer approved by the Materials and Tests Division and certified by the Texas A&M Transportation Institute (TTI) Mobile Retroreflectometer Certification Program.

Use a portable retroreflectometer that:

- uses 30-meter geometry and meets the requirements described in ASTM E1710;
- has either an internal Global Positioning System (GPS) or the ability to be linked with an external GPS with a minimum location accuracy of 16.5 ft., in accordance with the Circular Error Probability (CEP) method (CEP is the radius of the circle with its origin at a known position that encompasses 50% of the readings returned from the GPS instrument); and
- can record and export the GPS location and retroreflectivity reading for each measurement.

3.2. **Material Placement Requirements**. Use equipment that can place:

- a minimum length of 30,000 ft. for 6-in. solid or broken non-profile markings per working day at the specified thickness, unless otherwise approved;
- a minimum length of 15,000 ft. of solid or broken profile pavement markings per working day at the specified thickness;
- linear non-profile markings up to 8 in. wide in a single pass;
- non-profile pavement markings other than solid or broken lines at an approved production rate;
- a centerline and no-passing barrier-line configuration (consisting of one broken line and two solid lines simultaneously) to the alignment, spacing, and thickness for non-profile pavement markings shown on the plans;
- solid and broken lines simultaneously;
- white line from both sides;
- lines with clean edges, reasonably square ends, uniform width with a tolerance of ±1/8 in., and uniform thickness;
- skip lines between 10 and 10.5 ft., a stripe-to-gap ratio of 10 to 30, and a stripe-gap cycle between 39.5 ft. and 40.5 ft., automatically; and
- beads uniformly and almost instantly on the marking as the marking is applied.

For Type I markings, equipment must be capable of providing uniform heating of striping materials to temperatures exceeding 390°F (199°C). Ensure that the material is not heated to a temperature above the maximum temperature recommended by the manufacturer.

For Type I markings, equipment must be capable of maintaining the thermoplastic striping material in a plastic state in all mixing and conveying parts, including the line dispensing device, until applied.

4. CONSTRUCTION

Place markings before opening to traffic unless short-term or work zone markings are allowed.

4.1. **General**. Obtain approval for the sequence of work and estimated daily production. Minimize interference to roadway operations when placing markings on roadways open to traffic. Use traffic control as shown on the plans or as approved. Protect all markings placed under open-traffic conditions from traffic damage and disfigurement. Replace markings when more than 5% of the markings are damaged or disfigured.

Establish guides to mark the lateral location of pavement markings as shown on the plans or as directed and have guide locations verified. Use material for guides that will not leave a permanent mark on the roadway.

Apply markings on completely dry pavement that passes the following tests.

- **Type I Marking Application**. Place a sample of Type I marking material on a piece of tarpaper placed on the pavement. Allow the material to cool to ambient temperature, then inspect the underside of the tarpaper in contact with the pavement. Pavement will be considered dry if there is no condensation on the tarpaper.
- **Type II and Type III Marking Application**. Place a 1-sq. ft. piece of clear plastic on the pavement and weigh down the edges. The pavement is considered dry if, when inspected after 15 min., no condensation has occurred on the underside of the plastic.

Apply markings:

- using personnel skilled and experienced in installation of pavement markings;
- that meet the requirements of Tex-828-B;
- that meet minimum retroreflectivity requirements;
- using widths and colors shown on the plans;
- at locations shown on the plans;
- in proper alignment with the guides without deviating from the alignment more than 1 in. per 200 ft. of roadway or more than 2 in. maximum;
- without abrupt deviations;
- free of blisters and with no more than 5% holes or voids (percent by area);
- with uniform cross-section, density, and thickness;
- with clean and reasonably square ends; and
- that are retroreflectorized with drop-on glass beads.

Remove all applied markings that are not in alignment or sequence as shown on the plans or in accordance with the specifications at the Contractor's expense, in accordance with Item 677, "Eliminating Existing Pavement Markings and Markers," except for measurement and payment.

4.2. **Spot Striping**. Perform spot striping on a callout basis with a minimum callout quantity as shown on the plans.

4.3. **Surface Preparation**. Prepare surfaces in accordance with this Section unless otherwise shown on the plans.

4.3.1. **Surface Cleaning for Pavement Marking Applications on New Asphalt Surfaces with No Existing Pavement Markings and for Retracing of Existing Pavement Markings on All Surfaces**. Use air blast or broom to clean the pavement surface to remove loose material unless otherwise shown on the plans. A sealer for Type I markings is not required unless otherwise shown on the plans. If cleaning is needed beyond what is specified, Engineer can use force account to compensate for the extra effort. This is mainly applied when the pavement is covered with thick layer of dirt or mud or there is grass growing on the pavement.

4.3.2. **Surface Cleaning for All Concrete Surfaces and Asphalt Surfaces Only When Specified in the Plans (Excludes New Asphalt Surfaces with No Existing Pavement Markings and Retracing)**. Clean surfaces in accordance with Item 678, "Pavement Surface Preparation for Markings," to remove curing membrane, dirt, grease, existing loose and flaking construction markings, and other forms of contamination.

4.3.3. **Sealer for Type I Markings**. Apply a pavement sealer when shown on the plans. Pavement sealers are recommended for old asphalt surfaces (more than 3 yr. old) and for all concrete surfaces before placing Type I markings on locations that do not have existing markings. The pavement sealer may be either a Type II marking or an acrylic or epoxy sealer as recommended by the Type I marking manufacturer, unless otherwise shown on the plans. Follow the manufacturer's directions for application of acrylic or epoxy sealers. Clean the surface of sealer that becomes dirty after placement by washing or in accordance with Section 666.4.3.1., "Surface Cleaning for Pavement Marking Applications on New Asphalt Surfaces with No Existing Pavement Markings and for Retracing of Existing Pavement Markings on All Surfaces," as directed.

Place the sealer in the same configuration and color (unless clear) as the Type I markings unless otherwise shown on the plans.

4.4. **Application**. Apply markings during favorable weather unless otherwise directed. If markings are placed at Contractor option when inclement weather is impending and the markings are damaged by subsequent precipitation, the Contractor is responsible for all required replacement costs.

4.4.1. **Type I Markings**. Place all Type I markings after the sealer cures. Apply within the temperature limits recommended by the material manufacturer. Flush the spray head if spray application operations cease for 5 min. or longer, by spraying marking material into a pan or similar container until the material being applied is at the recommended temperature.

Apply on clean, dry pavement passing the moisture test in accordance with Section 666.4.1., "General," and with a surface temperature above 50°F when measured in accordance with Tex-829-B.

The Engineer will measure thickness of markings in accordance with Tex-854-B.

4.4.1.1. **Non-Profile Pavement Markings**. Apply Type I non-profile markings with a minimum thickness of:

- 0.100 in. (100 mils) for new markings and retracing water-based markings on surface treatments involving Item 316, "Seal Coat,"
- 0.060 in. (60 mils) for retracing on thermoplastic pavement markings, or
- 0.090 in. (90 mils) for all other Type I markings.

4.4.1.2. **Profile Pavement Markings**. Apply Type I profile markings with a minimum thickness of 0.090 in. (90 mils) for the longitudinal stripe portion.

In addition, at a longitudinal spacing shown on the plans, the markings must be profiled in a vertical manner such that the profile is transverse to the longitudinal marking direction. The profile must not be less than 0.30 in. (300 mils) nor greater than 0.41 in. (410 mils) in height when measured from the normal top surface plane of the base marking to the top of the raised profile marking. The transverse width of the profile must not be less than 5.25 in. and the longitudinal width not less than 2 in., when measured at the top surface plane of the profile bar. The profile may be either a one or two transverse bar profile. When the two transverse bar profile is used, the spacing between the bases of the profile bars must not exceed 0.50 in. The above dimensions for transverse bars are for 6-in. wide longitudinal marking.

The raised profile markings must be uniform in size, appearance, and spacing. When profile markings are applied in a two-step process, the raised profile markings must be applied first and then the stripe applied over them. The raised profile markings in a two-step process may be circular in shape. The circular profile markings must be uniform in diameter and the diameter must not be less than 5.25 in. The height of the apex must not be less than 0.30 in. (300 mils) nor greater than 0.41 in. (410 mils) when measured from the normal top surface of the base marking to the top of the raised profile marking.

4.4.1.3. **Type I All-Weather Pavement Markings**. Apply Type I all-weather markings to at least 100-mil film thickness.

4.4.2. **Type II Markings**. Apply on surfaces with a minimum surface temperature of 50°F when measured in accordance with Tex-829-B. Apply at least 30 gal. per mile on concrete and asphalt surfaces and at least 33 gal. per mile on surface treatments for a solid 6-in. line. Adjust application rates proportionally for other widths. When Type II markings are used as a sealer for Type I markings, apply at least 22-1/2 gal. per mile using Type II drop-on beads.

Apply Type II all-weather markings to at least 25-mil wet film thickness.

4.4.3. **Type III Markings**. Apply in conformance with the manufacturer's recommendations.

4.4.4. **Bead Coverage and Embedment**. Provide a uniform distribution of beads across the surface of the stripe with 40–60% bead embedment.

4.4.5. **Durability**. Provide markings that do not lose more than 5% of the striping material in any 1-ft. section of stripe during their performance period in accordance with Section 666.4.8., "Performance Period." Measure the durability in accordance with ASTM D913.

4.5. **Retroreflectivity Requirements**. Retroreflectivity requirements are not required for Contracts with less than 20,000 total ft. of longitudinal pavement markings, callout work, black shadow markings, or work zone pavement markings. Retroreflectivity requirements are for dry conditions unless otherwise specified.

4.5.1. **Type I Markings**. All Type I markings, including profile markings, must meet the following minimum retroreflectivity values for all longitudinal edgeline, centerline, no-passing barrier line, and lane line markings.

- **White Markings (ASTM E1710)**. 250 millicandelas per square meter per lux (mcd/m^2/lx).
- **Yellow Markings (ASTM E1710)**. 175 mcd/m^2/lx.

Collect retroreflectivity measurement for markings applied on pavement surface other than seal coat after 10 days but not later than 30 days from the time of application. For markings applied on seal coat, measure retroreflectivity after 3 days but not later than 10 days from the time of application.

4.5.2. **Type I High-Performance Markings**. Type I high-performance markings must meet the following minimum retroreflectivity values for all longitudinal edgeline, centerline, no-passing barrier line, and lane line markings when measured any time after 30 days but not later than 60 days from the time of application.

- **White Markings (ASTM E1710)**. 400 mcd/m^2/lx.
- **Yellow Markings (ASTM E1710)**. 250 mcd/m^2/lx.

4.5.3. **Type I All-Weather Markings**. Type I all-weather markings must meet the following minimum retroreflectivity values for all longitudinal edgeline, centerline, no-passing barrier line, and lane line markings when measured any time after 30 days but not later than 60 days from the time of application.

- **White Markings Dry (ASTM E1710)**. 400 mcd/m^2/lx.
- **Yellow Markings Dry (ASTM E1710)**. 250 mcd/m^2/lx.
- **White Markings Wet Continuous (ASTM E2832)**. 150 mcd/m^2/lx.
- **Yellow Markings Wet Continuous (ASTM E2832)**. 125 mcd/m^2/lx.

4.5.4. **Type II Markings**. Type II markings must meet the following minimum retroreflectivity values for all longitudinal edgeline, centerline, no-passing barrier line, and lane line, markings.

- **White Markings**. 175 mcd/m^2/lx.
- **Yellow Markings**. 125 mcd/m^2/lx.

Collect retroreflectivity measurement for markings applied on pavement surface other than seal coat after 10 days but not later than 30 days from the time of application. For markings applied on seal coat, measure retroreflectivity after 3 days but not later than 10 days from the time of application.

4.5.5. **Type II All-Weather Markings**. Meet the following minimum retroreflectivity values for all longitudinal edgeline, centerline, no-passing barrier line, and lane line markings.

- **White Markings Dry (ASTM E1710)**. 250 mcd/m^2/lx.
- **Yellow Markings Dry (ASTM E1710)**. 150 mcd/m^2/lx.
- **White Markings Wet Continuous (ASTM E2832)**. 100 mcd/m^2/lx.
- **Yellow Markings Wet Continuous (ASTM E2832)**. 75 mcd/m^2/lx.

Collect retroreflectivity measurement for markings applied on pavement surface other than seal coat after 10 days but not later than 30 days from the time of application. For markings applied on seal coat, measure the retroreflectivity after 3 days but not later than 10 days from the time of application.

4.5.6. **Type III Markings**. Type III markings must meet the following minimum retroreflectivity values for all longitudinal edgeline, centerline, no-passing barrier line, and lane line markings when measured any time after 30 days but not later than 60 days from the time of application.

- **White Markings**. 400 mcd/m^2/lx.
- **Yellow Markings**. 250 mcd/m^2/lx.

4.5.7. **Type III All-Weather Markings**. Type III all-weather markings must meet the following minimum retroreflectivity values for all longitudinal edgeline, centerline, no-passing barrier line, and lane line markings when measured any time after 30 days but not later than 60 days from the time of application.

- **White Markings Dry (ASTM 1710)**. 400 mcd/m^2/lx.
- **Yellow Markings Dry (ASTM 1710)**. 250 mcd/m^2/lx.
- **White Markings Wet Continuous (ASTM 2832)**. 150 mcd/m^2/lx.
- **Yellow Markings Wet Continuous (ASTM 2832)**. 125 mcd/m^2/lx.

4.6. **Retroreflectivity Measurements**. Use a mobile retroreflectometer to measure the retroreflectivity of markings for Contracts with more than 50,000 total ft. of longitudinal pavement markings, unless otherwise shown on the plans. For Contracts between 20,000 and 50,000 total ft. of longitudinal pavement markings, mobile or portable retroreflectometers may be used at the Contractor's discretion. Coordinate with and obtain authorization from the Engineer before starting any retroreflectivity data collection.

Use a portable retroreflectometer for measuring the wet continuous retroreflectivity in accordance with ASTM E2832. Notify the Department when wet retroreflectivity measurements are to be taken. The Department will observe the wet retroreflectivity readings.

4.6.1. **Mobile Retroreflectometer Measurements**. Provide mobile measurement averages for every 0.1 mi. unless otherwise specified or approved. Take measurements on each section of roadway for each series of markings (e.g., edgeline, center skip line, and each line of a double line) and for each direction of traffic flow. Measure each line in both directions for centerlines on two-way roadways (i.e., measure both double solid lines in both directions and measure all center skip lines in both directions). Furnish measurements in accordance with Item 667, "Mobile Retroreflectivity Data Collection for Pavement Markings," unless otherwise approved. The Engineer may require a field comparison check using a calibrated portable retroreflectometer for verification and to ensure accuracy. Use all equipment in conformance with the manufacturer's recommendations and directions. Inform the Engineer and TTI at least 24 hr. before taking any measurements.

A marking meets the retroreflectivity requirements if:

- the combined average retroreflectivity measurement for a 1-mi. segment meets the minimum retroreflectivity values specified and no more than 30% of the retroreflectivity measurement values are below the minimum retroreflectivity requirements value within that 1-mi. segment; or
- the combined average retroreflectivity measurement for a 1-mi. segment does not meet the minimum retroreflectivity values specified, but no more than 20% of the retroreflectivity measurements within that 1-mi. segment are below the minimum retroreflectivity requirement.

The 1-mi. segment will start from the beginning of the data collection and end after a mile's worth of measurements have been taken. Each subsequent mile of measurements will be a new segment. Centerlines with two stripes (either solid or broken) will result in 2 mi. of data for each mile segment. Each centerline stripe must be tested for compliance as a stand-alone stripe.

Restripe at the Contractor's expense if the markings fail retroreflectivity requirements. Take retroreflectivity measurements of all restriped markings following the time interval allowed based on the type of marking and the pavement surface for the latest application.

For all Type I markings, if the restripe application does not meet minimum retroreflectivity requirements or the initial stripe combined with the restripe exceeds 0.180 in. (180 mils), the Engineer may require:

- removal of all existing markings,
- a new application as initially specified, and
- a repeat of the application process until minimum retroreflectivity requirements are met.

For all Type III markings, if the first application does not meet minimum retroreflectivity requirements, the Engineer may require removal of all existing markings, a new application as initially specified, and a repeat of the application process until minimum retroreflectivity requirements are met.

4.6.2. **Portable Retroreflectometer Measurements**. For non-all-weather markings, provide portable measurement averages for every 1.0 mi. unless otherwise specified or approved. Using a portable reflectometer, take at least 20 measurements for each 1-mi. section of roadway for each series of markings (e.g., edgeline, center skip line, and each line of a double line) and direction of traffic flow. Measure each line in both directions for centerlines on two-way roadways (i.e., measure both double solid lines in both directions and measure all center skip lines in both directions). The spacing between each measurement must be at least 100 ft. The Engineer may decrease the mileage frequency for measurements if the previous measurements provide satisfactory results. The Engineer may resume the original number of measurements if concerns arise.

For all-weather markings, take at least three measurements for each series of markings (e.g., edgeline, center skip line, and each line of a double line) and direction of traffic flow and average the three measurements for each marking. The spacing between each measurement must be at least 100 ft. If the average of the three measurements taken on an individual marking falls below the minimum acceptable retroreflectivity value, take at least six additional measurements on that individual marking and average them. These six additional measurements must also be spaced at least 100 ft. apart. If the average of these six measurements falls below the minimum acceptable retroreflectivity value, the marking does not meet the performance requirements.

Restripe at the Contractor's expense if the averages of these measurements fail. Retake portable retroreflectometer measurements of all restriped markings following the time interval allowed based on the type of marking and the pavement surface for the latest application.

4.7. **Traffic Control**. Provide traffic control, as required, when taking portable retroreflectivity measurements after marking application. For the minimum traffic control requirements on low-volume roadways (as shown on the plans), refer to "Temporary Road Closure" in Part 6 of the TMUTCD. For all other roadways, the minimum traffic control requirements will be as shown on the Traffic Control Plan (TCP) standard sheets TCP (3-1) and TCP (3-2). The lead vehicle will not be required on divided highways. The TCP and traffic control devices must meet the requirements listed in Item 502, "Barricades, Signs, and Traffic Handling." Time restrictions that apply during striping application will also apply during the retroreflectivity inspections, except when using the mobile retroreflectometer, unless otherwise shown on the plans or approved.

4.8. **Performance Period**. All longitudinal markings must meet the minimum retroreflectivity requirements within the timeframe specified. All markings must meet all other performance requirements in accordance with this Item for at least 30 calendar days after installation. Unless otherwise directed, remove pavement markings that fail to meet requirements and replace them at the Contractor's expense. Replace failing markings within 30 days of notification. All replacement markings must also meet all requirements in accordance with this Item for at least 30 calendar days after installation.

4. MEASUREMENT

This Item will be measured by the foot; by each word, symbol, or shape; or by any other unit shown on the plans. Each stripe will be measured separately.

This is a plans quantity measurement Item. The quantity to be paid is the quantity shown in the proposal, unless modified by Article 9.2., "Plans Quantity Measurement." Additional measurements or calculations will be made if adjustments of quantities are required.

Acrylic or epoxy sealer, or Type II markings when used as a sealer for Type I markings, will be measured by the foot; by each word, symbol, or shape; or by any other unit shown on the plans.

Profile pavement markings will be measured as a marking consisting of both the pavement marking stripe and the raised profile, regardless of the installation method used.

5. PAYMENT

The work performed and materials furnished in accordance with this Item and measured as provided under "Measurement" will be paid for at the unit price bid for "Pavement Sealer" of the size specified; "Pavement Sealer (Call Out)" of the size specified; "Retroreflectorized Pavement Markings" of the type, color, shape, width, size, and thickness specified; "Non-Retroreflectorized Shadow Pavement Markings" of the type, width, size, and thickness specified; "Type I High Performance Pavement Markings" of the color, width, size, and thickness specified; "All-Weather Pavement Markings" of the type, color, shape, width, and thickness specified; "Pavement Marking (Call Out)" of the type, color, width, size, and thickness specified; or "Retroreflectorized Profile Pavement Markings" of the color, shape, size, and width specified.

This price is full compensation for application of pavement markings, materials, equipment, labor, tools, and incidentals.

Surface cleaning for all concrete surfaces and asphalt surfaces only when shown on the plans (excludes new asphalt surfaces with no existing pavement markings and retracing) will be paid for under Item 678. Surface cleaning for pavement marking applications on new asphalt surfaces with no existing pavement markings and for retracing of existing pavement markings on all surfaces will not be paid for directly, but will be subsidiary to this Item. If cleaning is needed beyond regular brooming and blowing compressed air, the Engineer may use force account to compensate for the extra effort. This is mainly applied when the pavement is covered with a thick layer of dirt or mud or grass is growing on the pavement.

Surface preparation of any surface where pavement markings are being retraced, except for sealing, will not be paid for directly, but will be subsidiary to this Item.

If the Engineer requires that markings be placed in inclement weather, repair or replacement of markings damaged by the inclement weather will be paid for in addition to the original plans quantity.

Item 760
Cleaning and Reshaping Ditches

1. DESCRIPTION

Clean and reshape ditches.

2. WORK METHODS

Excavate and remove excess material from ditches and from around fixtures within the limits of the excavation or reshape by cleaning silt from the ditch and spreading on backslope as approved. Reshape ditches shown on the plans, or as directed. Dispose of excess material in conformance with applicable federal, state, and local regulations, or place on right of way, as directed. Maintain ditch drainage during cleaning and reshaping work.

3. MEASUREMENT

Measurement will be as follows.

3.1. **Foot**. By the foot, measured along the centerline of the ditch.

3.2. **Cubic Yard in Place**. By the cubic yard in its original position computed by the method of average end areas.

3.3. **Cubic Yard in Vehicle**. By the cubic yard in vehicles measured at the point of excavation.

4. PAYMENT

The work performed in accordance with this Item and measured as provided under “Measurement” will be paid for at the unit price bid for “Ditch Reshaping (Foot),” “Ditch Cleaning and Reshaping (Cubic Yard in Place),” or “Ditch Cleaning and Reshaping (Cubic Yard in Vehicle).” This price is full compensation for excavation, disposal of removed materials, reshaping, equipment, labor, tools, and incidentals.

SPECIAL PROVISION TO ITEM 1

"DEFINITION OF TERMS"

For this project, Item 1 of the Texas Standard Specifications is hereby amended with respect to the clauses cited below and no other clauses or requirements of this Item are waived or changed hereby:

THE TERM "DEPARTMENT," "STATE," "STATE HIGHWAY DEPARTMENT OF TEXAS", "TxDOT", "TEXAS DEPARTMENT OF TRANSPORTATION", STATE DEPARTMENT OF HIGHWAYS AND PUBLIC TRANSPORTATION," "STATE DEPARTMENT OF HIGHWAYS AND PUBLIC TRANSPORTATION COMMISSION," "COMMISSION," AND "STATE HIGHWAY COMMISSION," SHALL, IN THE USE OF THE STANDARD SPECIFICATIONS FOR ALL WORK IN CONNECTION WITH THIS PROJECT, BE DEEMED TO MEAN GALVESTON COUNTY, PARTY OF THE FIRST PART IN ACCOMPANYING CONTRACT OR CONTRACTS. ANY REFERENCE IN THE TEXAS STANDARD SPECIFICATIONS TO THE STATE OF TEXAS, ITS OFFICIALS, EMPLOYEES, OR AGENTS SHALL BE DEEMED TO MEAN GALVESTON COUNTY, ITS OFFICIALS, EMPLOYEES, OR AGENTS.

Articles 1.26, "Certificate of Insurance" ; 1.28, "Commission", 1.47, "Department", 1.70 "Letting Official " and 1.124 "State" are deleted.

Article 1.53, "ENGINEER", is revised to read in its entirety as follows:

1.53 ENGINEER. Galveston County Engineer or his authorized representatives. If a representative is authorized to function as the ENGINEER'S representative with respect to certain ENGINEER'S activities that representative's responsibilities and obligations shall be limited as provided in Article 1.148.

Article 1.64, "INSPECTOR," is revised to read in its entirety as follows:

1.64 INSPECTOR. The representative of the ENGINEER assigned and authorized to observe or inspect any or all parts of the work and the material to be used therein. A representative is authorized to function as the ENGINEER'S representative with respect to certain activities, and that representative's responsibilities and obligations shall be limited as provided in Article 1.148.

Special Provisions to Item 1

"DEFINITION OF TERMS"

ADDITIONAL ARTICLES ARE ADDED AS FOLLOWS:

1.148 CONSULTING ENGINEER. Independent engineering firms contracting with Galveston County for the providing of professional engineering services. The engineering firms are the representatives of Galveston County only to the extent provided in the Contract documents and in such special instances where they are specifically authorized by Galveston County so to act. All powers and rights assigned by Galveston County to the engineering firms with respect to the work are solely and exclusively for the benefit of Galveston County and not for the CONTRACTOR. In carrying out of its powers and rights assigned by Galveston County the engineering firms shall function as a representative of Galveston County and shall act by and for Galveston County. Irrespective of what authority may be assigned by Galveston County to the engineering firms, CONTRACTOR remains fully and solely responsible and liable for its obligations to perform the work in accordance with the requirements of the plans and specifications; to insure against failures in safety precautions; to carry out his work pursuant to safe methods of construction; to select and fulfill the proper manner, means, and methods in performing the work in order to meet the plans and specifications; and to complete the work in accordance with the contract documents.

SPECIAL PROVISION TO ITEM 2

INSTRUCTIONS TO BIDDERS

For this project, Item 2 of the Texas Standard Specifications is hereby deleted in its entirety.

The Instructions to Bidders is included elsewhere in the Contract Documents.

SPECIAL PROVISION TO ITEM 3

AWARD AND EXECUTION OF CONTRACT

For this project, Item 3 of the Texas Standard Specifications is hereby deleted in its entirety.

The Award and Execution of Contract is included elsewhere in the Contract Documents.

SPECIAL PROVISION TO ITEM 4

SCOPE OF WORK

For this project, Item 4 of the Texas Standard Specifications is hereby amended with respect to the clauses cited below and no other clauses or requirements of this Item are waived or changed hereby.

ARTICLE 4.2 "CHANGES IN WORK;" ARTICLE 4.3 "DIFFERING SITE CONDITIONS" and ARTICLE 4.4 "REQUESTS AND CLAIMS FOR ADDITIONAL COMPENSATION" are deleted in their entirety and replaced by Article 41 "CHANGES and ALTERATIONS" and ARTICLE 42 "EXTRA WORK" of “Special Provisions for Construction”.

SPECIAL PROVISION TO ITEM 5

CONTROL OF THE WORK

For this project, Item 5 of the Texas Standard Specifications is hereby amended with respect to the clauses cited below and no other clauses or requirements of this Item are waived or changed hereby.

ARTICLE 5.2 "PLANS AND WORKING DRAWINGS." The first sentence of the first paragraph is hereby revised to read as follows:

When required, the Contractor shall provide working drawings to supplement the plans with all necessary details not included on the Contract plans.

ARTICLE 5.5 "COOPERATION OF CONTRACTOR." The last sentence of the first paragraph is hereby revised to read as follows:

The Contractor will be supplied with three (3) copies of the plans, specifications and special provisions and he shall have one (1) copy of each available on the project at all times.

ARTICLE 5.6 "CONSTRUCTION SURVEYING," is hereby deleted in its entirety.

ARTICLE 5.7 "INSPECTION." The sixth sentence of the second paragraph is hereby revised to read as follows:

If the uncovered work is acceptable, the costs to uncover, remove and replace or make good the parts removed will be paid for in accordance with Article 41. “Changes and Alterations” of “Special Provisions for Construction”.

ARTICLE 5.8 "FINAL ACCEPTANCE," is hereby deleted in its entirety. It is replaced by Article 6(b). ”PAYMENTS TO CONTRACTOR, FINAL PAYMENT” of “Special Provisions for Construction”.

SPECIAL PROVISION TO ITEM 6

CONTROL OF MATERIALS

For this project, Item 6 of the Texas Standard Specifications is hereby amended with respect to the clauses cited below and no other clauses or requirements of this Item are waived or changed hereby.

ARTICLE 6.1 "SOURCE CONTROL." Paragraph A. “Buy America” and B. “Buy Texas” are hereby deleted in their entirety.

ARTICLE 6.7 "Department-furnished Material" is hereby deleted in its entirety.

SPECIAL PROVISION TO ITEM 7

LEGAL RELATIONS AND RESPONSIBILITIES

For this project, Item 7 of the Texas Standard Specifications is hereby amended with respect to the clauses cited below and no other clauses or requirements of this Item are waived or changed hereby.

ARTICLE 7.4 "INSURANCE AND BONDS" is hereby deleted in its entirety.

ARTICLE 7.5 "RESTORING SURFACES OPENED BY PERMISSION." The third sentence of the first paragraph is hereby revised to read as follows:

Payment for repair of surfaces opened by permission will be made in accordance with Article 41. “Changes and Alterations” of “Special Provisions for Construction”.

SPECIAL PROVISION TO ITEM 8

PROSECUTION AND PROGRESS

For this project, Item 8 of the Texas Standard Specifications is hereby amended with respect to the clauses cited below and no other clauses or requirements of this Item are waived or changed hereby.

ARTICLE 8.1 "PROSECUTION OF WORK" The third sentence in the first paragraph is hereby revised to read as follows:

“The Contractor shall begin the work to be performed under the contract within ten (10) days after the date of the authorization to begin work as shown on the work order.

ARTICLE 8.2 “PROGRESS SCHEDULES”, B. “CONSTRUCTION CONTRACTS” The first sentence in the first paragraph is hereby revised to read as follows:

If required by the Engineer, before starting work on a construction Contract, prepare and submit a progress schedule based on the sequence of work and traffic control plan shown in the Contract.

SPECIAL PROVISION TO ITEM 9

MEASUREMENT AND PAYMENT

For this project, Item 9 of the Texas Standard Specifications is hereby amended with respect to the clauses cited below and no other clauses or requirements of this Item are waived or changed hereby.

ARTICLE 9.2 "PLANS QUANTITY MEASUREMENT" is hereby revised to read as follows: Plans quantities may not represent the exact quantity of work performed or material moved, handled, or placed during the execution of the Contract. The estimated bid quantities are designated as final payment quantities.

ARTICLE 9.4 "PAYMENT FOR EXTRA WORK" is hereby revised to read as follows:

Extra work ordered, performed and accepted will be paid for in accordance with ARTICLE 42, "EXTRA WORK" of “Special Provisions for Construction”.

ARTICLE 9.5 "FORCE ACCOUNT" is hereby deleted in its entirety.

ARTICLE 9.8 "FINAL PAYMENT" and ARTICLE 40, "FINAL PAYMENT" are hereby deleted in their entirety and replaced by ARTICLE 6(b), "PAYMENTS TO CONTACTOR, FINAL PAYMENT" of “Special Provisions for Construction”.

SPECIAL SPECIFICATION

1005

Loose Aggregate for Groundcover

1. **Description.** Apply a surface covering composed of a layer of loose aggregate material.

2. **Materials.** Aggregate shall be composed of clean, tough and durable particles of gravel, crushed gravel, crushed stone or other suitable material as specified on the plans.

3. **Construction Methods.** Prepare the area to be treated as indicated on the plans prior to the application of loose aggregate material. Apply the material by hand or by other approved methods.

   Evenly and smoothly distribute the material in the quantity specified. Take care to apply the material without injury or damage to the plantings.

   Maintenance of the aggregate surface is the responsibility of the Contractor until the work is accepted.

4. **Measurement.** This Item will be measured by the cubic yard in vehicles at the point of delivery on the site. Materials not used will be deducted from the quantity to be paid for.

5. **Payment.** The work performed and materials furnished in accordance with this Item and measured as provided under "Measurement" will be paid for at the unit price bid for "Loose Aggregate for Groundcover", of the type(s) specified. This price is full compensation for preparing the surface to receive the aggregate; furnishing, preparing, hauling and placing the aggregate material; for all freight involved, if applicable; and for all manipulations, labor, tools, equipment and incidentals necessary to complete the work.

SPECIAL SPECIFICATION

3048

Permeable Concrete

1. Description. Furnish permeable concrete with hydraulic cement and chemical admixture for use in permeable concrete pavements.

2. Materials.

A. Cement. Furnish cement conforming to DMS-4600, "Hydraulic Cement." Select Type I or II (ASTM C-150) or Type IP or IS (ASTM C-595).

B. Chemical Admixtures. Furnish Ecocreto™ Admixture Type "1" or equivalent. Obtain from Ecocreto™ of Texas, Inc., 17050 IH 35, Buda, Texas 78610, Telephone 866-326-2738.

Use admixture in accordance with manufacturer's instructions and recommendations.

C. Water. Furnish mixing and curing water that is free from oils, acids, organic matter, or other deleterious substances. Water from municipal supplies approved by the Texas Department of Health will not require testing. When using water from other sources, provide test reports showing compliance with Table 1 before use.

Water that is a blend of concrete wash water and other acceptable water sources, certified by the concrete producer as complying with the requirements of both Table 1 and Table 2, may be used as mix water. Test the blended water weekly for 4 weeks for compliance with Table 1 and Table 2 or provide previous test results. Then test every month for compliance. Provide water test results upon request.

Table 1
Chemical Limits for Mix Water
(Reference Table 1 of Item 421, "Hydraulic Cement Concrete")

Table 2
Acceptance Criteria for Questionable Water Supplies
(Reference Table 2 of Item 421, "Hydraulic Cement Concrete")

Do not use mix water that has an adverse effect on any other chemical admixture or on strength or time of set of the concrete. When using white hydraulic cement, use mixing and curing water free of iron and other impurities that may cause staining or discoloration.

D. Coarse Aggregate. Supply coarse aggregates that meet the definitions in Tex-100-E. Provide coarse aggregates from sources listed in the Department's Concrete Rated Source Quality Catalog (CRSQC). Provide coarse aggregate from non-listed sources only when tested and approved by the Engineer before use. Allow 30 calendar days for

the Engineer to sample, test, and report results for non-listed sources. Do not combine approved material with unapproved material.

Provide light-colored coarse aggregate consisting of durable particles of crushed stone that are free from frozen material and from injurious amounts of salt, alkali, vegetable matter, or other objectionable material, either free or as an adherent coating. Provide coarse aggregate of uniform quality throughout.

Provide coarse aggregate that, when tested in accordance with Tex-413-A, has:

- at most 0.25% by weight of clay lumps,
- at most 1.0% by weight of shale, and
- at most 5.0% by weight of laminated and friable particles.

Wear must not be more than 40% when tested in accordance with Tex-410-A.

Unless otherwise shown on the plans, provide coarse aggregate with a 5-cycle magnesium sulfate soundness of not more than 18% when tested in accordance with Tex-411-A. Crushed recycled hydraulic cement concrete is not subject to the 5-cycle soundness test.

The loss by decantation as tested in accordance with Tex-406-A, plus the allowable weight of clay lumps, must not exceed 1.0% or the value shown on the plans, whichever is smaller. In the case of aggregates made primarily from crushing stone, if the material finer than the No. 200 sieve is established to be the dust of fracture and essentially free from clay or shale as established by Tex-406-A, Part III, the limit may be increased to 1.5%. When crushed limestone coarse aggregate is used in concrete pavements, the decant may exceed 1.0% but not more than 3.0% if the material finer than the No. 200 sieve is determined to be at least 67% calcium carbonate in accordance with Tex-406-A, Part III.

Unless otherwise specified, provide aggregate conforming to the gradation requirements shown in Table 3 when tested in accordance with Tex-401-A.

Table 3
Coarse Aggregate Gradation Chart

Aggregate Gradation No.	Nominal Size	Percent Passing on Each Sieve			
		1/2"	3/8"	No. 4	No. 8
8	3/8”	100	95-100	20-65	0-10

E. Mortar and Grout. When required or shown on the plans, provide mortar and grout consisting of 1 part hydraulic cement, 2 parts sand, and sufficient water to provide the desired consistency. Provide mortar with a consistency such that the mortar can be easily handled and spread by trowel. Provide grout of a consistency that will flow into and completely fill all voids.

3. Equipment.

A. Concrete Plants and Mixing Equipment. Except for volumetric mixers (auger/mixer), each plant and truck mixer must be currently certified by the National Ready Mixed

Concrete Association (NRMCA) or have an inspection report signed and sealed by a licensed professional engineer showing that concrete measuring, mixing, and delivery equipment meets all requirements of ASTM C 94. A new certification or signed and sealed report is required every time a plant is moved. Plants with a licensed engineer's inspection require reinspection every 2 years. Provide a copy of the certification or the signed and sealed inspection report to the Engineer. When equipment or facilities fail to meet specification requirements, remove them from service until corrected.

1. **Scales.** Check all scales prior to beginning of operations, after each move, or whenever their accuracy or adequacy is questioned, and at least once every 6 mo. Immediately correct deficiencies, and recalibrate. Provide a record of calibration showing scales in compliance with ASTM C 94 requirements. Check batching accuracy of volumetric water batching devices and admixture dispensing devices at least every 90 days. Perform daily checks as necessary to ensure measuring accuracy.

2. **Volumetric Mixers.** Provide volumetric mixers with rating plates defining the capacity and the performance of the mixer in accordance with the Volumetric Mixer Manufacturers Bureau or equivalent. Provide volumetric mixers that comply with ASTM C 685. Provide test data showing mixers meet the uniformity test requirements of Tex-472-A.

3. **Agitators and Truck and Stationary Mixers.** Inspect and furnish inspection reports on truck mixers and agitators annually. If an inspection within 12 mo. is not practical, a 2-mo. grace period (for a maximum of 14 mo. between inspections) is permitted. Include in the report the condition of blades and fins and their percent wear from the original manufacturer's design. Repair mixing equipment exhibiting 10% or more wear before use. Provide truck mixers and agitators equipped with means to readily verify the number of revolutions of the drum, blades, or paddles.

   Provide stationary and truck mixers capable of combining the ingredients of the concrete within the specified time or the number of revolutions specified into a thoroughly mixed and uniform mass and capable of discharging the concrete so that at least 5 of the 6 requirements of Tex-472-A are met.

   As directed, to resolve issues of mix uniformity and mixer performance, perform concrete uniformity tests on mixers or agitators in accordance with Tex-472-A.

   Perform the mixer or agitator uniformity test at the full rated capacity of the equipment and within the maximum mixing time or maximum number of revolutions. Remove from service all equipment that fails the uniformity test.

   Inspect and maintain mixers and agitators. Keep them reasonably free of concrete buildup, and repair or replace worn or damaged blades or fins.

   Ensure all mixers have a plate affixed showing manufacturer's recommended operating speed and rated capacity for mixing and agitating.

B. Hauling Equipment. Provide hauling equipment capable of maintaining the mixed concrete in a thoroughly mixed and uniform mass and of discharging the concrete with a satisfactory degree of uniformity.

When using non-agitating equipment for transporting concrete, provide equipment with smooth, mortar-tight metal containers equipped with gates that prevent accidental discharge of the concrete.

C. Testing Equipment. Unless otherwise shown on the plans or specified, in accordance with the pertinent test procedure, furnish and maintain:

- test molds,
- curing facilities,
- maturity meters if used, and
- wheelbarrow or other container acceptable for the sampling of the concrete.

Provide strength-testing equipment in accordance with the Contract controlling test unless shown otherwise.

4. Construction.

A. Mix Design. Furnish mix design. Engineer will provide mix design to Ecocreto™ of Texas to insure design is proper for available aggregates in region. Commence with work only after Engineer's written approval of mix design.

1. Cementitious Materials. Use cementitious materials from prequalified sources; otherwise, request sampling and testing for approval before use. Unless otherwise specified or approved, limit cementitious material content to between 564 to 700 lb. per cubic yard.

2. Chemical Admixtures. Mix Ecocreto™ Admixture Type "1" amount in accordance with manufacturer's instructions and recommendations.

3. Water. Mix water quantity shall be such that the cement paste displays a wet metallic sheen without causing the paste to flow from the aggregate. Mix water quantity yielding a cement paste with a dull-dry appearance has insufficient water for hydration. Insufficient water results in inconsistency in the mix and poor aggregate bond strength. High water content results in the paste sealing the void system primarily at the bottom and poor aggregate surface bond.

B. Trial Batches. Perform all preliminary trial batches and testing necessary to substantiate the proposed mix designs, and provide documentation including mix design, material proportions, and test results substantiating that the mix design conforms to specification requirements.

Make all final trial batches using the proposed ingredients in a mixer that is representative of the mixers to be used on the job. Make the batch size at least 50% of the mixer's rated capacity. Perform fresh concrete tests for slump and make, cure, and test strength specimens for compliance with specification requirements. Test at least 3 sets of design strength specimens with 2 specimens per set in accordance with both Tex-

418-A and Tex-448-A for each test age (ex. six 7-day cylinders, six 7-day beams, six 28-day cylinders, and six 28-day beams). Before placing, provide the Engineer the option of witnessing final trial batches, including the testing of the concrete. If not provided this option, the Engineer may require additional trial batches, including testing, before the concrete is placed.

Establish 7-day compressive strength target values using the following formula for each concrete mix to be used:

Target Value= (4,400 psi)*(7-day avg. trial batch strength)/(28-day avg. trial batch strength)

When there are changes in aggregates or in type, brand, or source of cement or chemical admixtures, reevaluate the mix as a new mix design. A change in vendor does not necessarily constitute a change in materials or source. When only the brand or source of cement is changed and there is a prior record of satisfactory performance of the cement with the ingredients, new trial batches may be waived by the Engineer.

C. Storage of Materials.

1. Cement. Store all cement in weatherproof enclosures that will protect them from dampness or absorption of moisture.

When permitted, small quantities of sacked cement may be stored in the open, on a raised platform, and under waterproof covering for up to 48 hours.

2. Aggregates. Handle and store concrete aggregates in a manner that prevents contamination with foreign materials. If the aggregates are stored on the ground, clear the sites for the stockpiles of all vegetation, level the sites, and do not use the bottom 6-in. layer of aggregate without cleaning the aggregate before use.

Where space is limited, separate the stockpiles using physical barriers. Store aggregates from different sources in different stockpiles unless the Engineer authorizes pre-blending of the aggregates. Minimize segregation in stockpiles. Remix and test stockpiles when segregation is apparent.

Sprinkle stockpiles to control moisture and temperature as necessary. Maintain reasonably uniform moisture content in aggregate stockpiles.

3. Admixtures. Store admixtures in accordance with manufacturer's recommendations and prevent admixtures from freezing.

D. Measurement of Materials. Except for volumetric mixers, measure concrete materials by weight. Measure mixing water, consisting of water added to the batch, ice added to the batch, water occurring as surface moisture on the aggregates, and water introduced in the form of admixtures, by volume or weight. Measure ice by weight. Measure cement and supplementary cementing materials in a weigh hopper and on a separate scale from those used for other materials. Measure the cement first when measuring the cumulative weight. Measure concrete chemical admixtures in powdered form by weight. Measure concrete chemical admixtures in liquid form by weight or volume. Measure batch materials within the tolerances of Table 4.

Table 4
Measurement Tolerances – Non-Volumetric Mixers
(Reference Table 9 of Item 421, "Hydraulic Cement Concrete")

When measuring cementitious materials at less than 30% of scale capacity, ensure that the quantity measured is accurate to not less than the required amount and not more than 4% in excess. When measuring aggregates in a cumulative weigh batcher at less than 30% of the scale capacity, ensure that the cumulative quantity is measured accurate to ±0.3% of scale capacity or ±3% of the required cumulative weight, whichever is less.

For volumetric mixers, base tolerances on volume–weight relationship established by calibration, and measure the various ingredients within the tolerances of Table 5.

Correct batch weight measurements for moisture.

When approved, under special circumstances, measure cement in bags of standard weight. Weighing of sacked cement is not required. Do not use fractional bags except for small hand-mixed batches of approximately 5 cu. ft. or less and when an approved method of volumetric or weight measurement is used.

Table 5
Measurement Tolerances – Non-Volumetric Mixers
(Reference Table 10 of Item 421, "Hydraulic Cement Concrete")

E. Mixing and Delivering Concrete. The use of an Ecocreto™ Certified Installer is a requirement. If the installing contractor and concrete producer do not have sufficient experience with Ecocreto™, the installing contractor shall retain an experienced consultant to monitor production, handling, and placement operations at the contractor's expense.

Mix and deliver concrete (without Ecocreto™ admixture) by means of one of the following operations:

- central-mixed,
- shrink-mixed,
- truck-mixed,
- volumetric mixer-mixed, or
- hand-mixed.

Add Ecocreto™ admixture at site and mix a minimum of 40 revolutions or to required consistency.

Operate mixers and agitators within the limits of the rated capacity and speed of rotation for mixing and agitation as designated by the manufacturer of the equipment.

Re-tempering or adding concrete chemical admixtures is only permitted at the job site when concrete is delivered in a truck mixer. Do not add water after the introduction of mixing water at the batch plant except on arrival at the job site, with approval, to adjust the slump of the concrete. Turn the drum or blades at least 30 additional revolutions at mixing speed to ensure thorough and uniform mixing of the concrete. Do not add water or chemical admixtures to the batch after any concrete has been discharged.

Maintain concrete delivery and placement rates sufficient to prevent cold joints.

Before unloading, furnish the delivery ticket for the batch of concrete containing the information required on Department Form 596, "Concrete Batch Ticket."

1. **Central-Mixed Concrete.** Provide concrete that is mixed completely in a stationary mixer. Mix concrete for a period of 1 min. for 1 cu. yd. and 15 sec. for each additional cu. yd. of rated capacity of the mixer unless mixer performance test data demonstrate that shorter mixing times can be used to obtain a uniform mix in accordance with Tex-472-A. Count the mixing time from the time all the solid materials are in the drum. Charge the mixer so that some water will enter before the cement and aggregate. Ensure that all water is in the drum by the end of the first 1/4 of the specified mixing time. Adjust the mixing time if necessary to achieve a uniform mix. Concrete mixed completely in a stationary mixer must be delivered to the project in a truck mixer, truck agitator, or non-agitating delivery vehicle. When a truck mixer or truck agitator is used for transporting concrete, use the manufacturer's designated agitating speed for any turning during transportation. Non-agitating delivery vehicles must be clean and free of built-up concrete with adequate means to control concrete discharge. Deliver the concrete to the project in a thoroughly mixed and uniform mass, and discharge the concrete with a satisfactory degree of uniformity. Resolve questions regarding the uniformity of the concrete by testing when directed by the Engineer in accordance with Tex-472-A.

2. **Shrink-Mixed Concrete.** Provide concrete that is first partially mixed in a stationary mixer and then mixed completely in a truck mixer. Partially mix for the minimum time required to intermingle the ingredients in the stationary mixer, and then transfer to a truck mixer and mix the concrete at the manufacturer's designated mixing speed for an adequate amount of time to produce thoroughly mixed concrete. Deliver the concrete to the project in a thoroughly mixed and uniform mass, and discharge the concrete with a satisfactory degree of uniformity.

3. **Truck-Mixed Concrete.** Mix the concrete in a truck mixer from 75 to 100 revolutions at the mixing speed designated by the manufacturer to produce a uniform concrete mix. Deliver the concrete to the project in a thoroughly mixed and uniform mass and discharge the concrete with a satisfactory degree of uniformity. Additional mixing at the job site at the mixing speed designated by the manufacturer is allowed as long as concrete is discharged before the drum has revolved a total of 300 revolutions after the introduction of the mixing water to the cement and the aggregates.

4. **Volumetric Mixer-Mixed Concrete.** Unless otherwise specified or permitted, perform all mixing operations in accordance with manufacturer's recommended procedures. Provide an accurate method of measuring all ingredients by volume, and calibrate equipment to assure correct measurement of materials within the specified tolerances.

5. **Hand-Mixed Concrete.** When permitted, for small placements of less than 2 cu. yd., mix up to a 2-sack batch of concrete by hand methods or in a small motor-driven mixer. For such placements, proportion the mix by volume or weight.

F. Placing, Finishing, and Curing Concrete. Place, finish, and cure concrete in accordance with the pertinent Items.

G. Sampling and Testing of Concrete. Unless otherwise specified, all fresh and hardened concrete is subject to testing as follows:

1. Sampling Fresh Concrete. Provide all material to be tested. Fresh concrete will be sampled for testing at the discharge end if using belt conveyors or pumps. When it is impractical to sample at the discharge end, a sample will be taken at the time of discharge from the delivery equipment and correlation testing will be performed and documented to ensure specification requirements are met at the discharge end.

2. Testing of Fresh Concrete. Results of tests will not determine acceptance.

a. Slump. Tex-415-A.

b. Temperature. Tex-422-A.

c. Making and Curing Strength Specimens. Tex-447-A.

3. Testing of Hardened Concrete. Results of tests will not determine acceptance.

a. Compressive Strength. Tex-418-A.

b. Flexural Strength. Tex-448-A.

4. Certification of Testing Personnel. Contractor personnel performing testing must be either ACI-certified or qualified by a Department-recognized equivalent written and performance testing program for the tests being performed. Personnel performing these tests are subject to Department approval. Use of a commercial laboratory is permitted. All personnel performing testing using the maturity method must be qualified by a training program recognized by the Department before using this method on the job.

5. Test Sample Handling. Unless otherwise shown on the plans or directed, remove forms and deliver department test specimens to curing facilities, in accordance with pertinent test procedures. Clean and prepare forms for reuse.

H. Adequacy and Acceptance of Concrete. The Engineer will sample and test fresh concrete for acceptance in accordance with Section 4.A.3, “Water.”

5. Measurement and Payment. The work performed, materials furnished, equipment, labor, tools, and incidentals will not be measured or paid for directly but will be subsidiary to pertinent Items.

Special Specification 6455
Grounding and Bonding for Electrical Systems

1. DESCRIPTION

Furnish and install grounding and bonding systems and equipment for electrical systems. Provide special applications to include underground distribution grounding, ground bonding common with lightning protection system, and foundation steel electrodes.

2. REFERENCES

Perform the work in accordance with the following:

- Item 618, “Conduit”
- Item 620, “Electrical Conductors”
- “Electrical Underground Vault”
- “Fire Rated Cable and Conduit”
- “Fire Rated Enclosures and Junction Boxes”
- “Control Voltage Electrical Power Cables”
- “Tunnel Lighting”
- “Motor Control Center with Variable Frequency Motor Controllers”
- “Switchboard”
- “Panelboards”
- “Uninterruptible Power Supply”
- “Manual Transfer Switch with Quick Connect”
- “Package Engine Generator”
- “Lighting Control Pane”
- “CCTV (Closed Circuit Television).”

3. SUBMITTALS

3.1. **Submittals**. Submittals include product data and shop drawings. Submit manufacturer’s standard product data and project-specific shop drawings, including:

- product data for each type of product,
- closeout submittals,
- operation and maintenance data, and
- plans showing as-built, dimensioned locations of system described in Section 4.13, “Field Quality Control,” including test wells, ground rods, ground rings, and grounding arrangements and connections for separately derived systems.

4. MATERIALS

4.1. **System Description.** Use electrical components, devices, and accessories listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application. Comply with UL 467 for grounding and bonding materials and equipment.

4.2. **Conductors**. Ensure bare copper conductors and associated materials comply with the following:

- Stranded Conductors. ASTMB8;
- Tinned Conductors. ASTMB33;
- Bonding Cable. 28 kcmil, 14 strands of No. 17 AWG conductor, 1/4 in. (6 mm) in diameter;
- Bonding Conductor. No. 4 or No. 6 AWG, stranded conductor;
- Bonding Jumper. Copper tape, braided conductors terminated with copper ferrules; 1-5/8 in. (41 mm) wide and 1/16 in. (1.6 mm) thick;
- Tinned Bonding Jumper. Tinned-copper tape, braided conductors terminated with copper ferrules; 1-5/8 in. (41 mm) wide and 1/16 in. (1.6 mm) thick; and
- Grounding Bus. Use predrilled rectangular bars of annealed copper, 1/4 in. by 4 in. (6.3mmby 100mm) in cross-section, 4 ft. long, with 9/32 in. (7.14-mm)holes spaced 1-1/8 in. (28 mm)apart. Stand-off insulators for mounting must comply with UL 891 for use in switchboards, 600 V and be Lexan or PVC, impulse tested at 5000 V.

4.3. **Connectors**. Ensure connectors are listed and labeled by an NRTL acceptable to authorities with jurisdiction for applications in which used and for specific types, sizes, and combinations of conductors and other items connected.

- Welded Connectors. Use exothermic-welding kits of types recommended by kit manufacturer for materials being joined and installation conditions.
- Bus-Bar Connectors. Use compression type, copper or copper alloy, with two wire terminals.
- Beam Clamps. Use mechanical type, terminal, ground wire access from four directions, with dual, tin□plated or silicon bronze bolts.
- Cable-to-Cable Connectors. Use compression type, copper or copper alloy.
- Cable Tray Ground Clamp. Use mechanical type, zinc-plated malleable iron.
- Conduit Hubs. Use mechanical type, terminal with threaded hub.
- Ground Rod Clamps. Use mechanical type, copper or copper alloy, terminal with hex-head bolt.
- Lay-in Lug Connector. Use mechanical type, copper rated for direct burial terminal with set screw.
- Service Post Connectors. Use mechanical type, bronze alloy terminal, in short- and long-stud lengths, capable of single and double conductor connections.
- Signal Reference Grid Clamp. Use mechanical type, stamped-steel terminal with hex-head screw.
- Straps. Use solid copper, cast-bronze clamp. Rated for 600 A.
- Tower Ground Clamps. Use mechanical type, copper or copper alloy, terminal one-piece clamp.
- U-Bolt Clamps. Use mechanical type, copper or copper alloy, terminal listed for direct burial.

4.4. **Grounding Electrodes.** Ensure grounding electrodes and associated materials comply with the following:

- Ground Rods. Use copper-clad steel, 3/4 in. by 10 ft. (19 mm by 3 m); and
- Ground Plates. Ensure plates are 1/4 in. (6 mm) thick, hot-dip galvanized.

5. CONSTRUCTION

5.1. **Conductors**. Install solid conductor for No. 8 AWG and smaller, and stranded conductors for No. 6 AWG and larger unless otherwise indicated. For underground grounding conductors, install bare tinned-copper conductor, No. 2/0 AWG minimum. Bury at least 30 in. (750 mm) below grade.

5.2. **Grounding Bus**. Install grounding bus in electrical equipment rooms, in rooms housing service equipment, and elsewhere as indicated. Install bus horizontally, on insulated spacers 2 in. (50 mm) minimum from wall, 6 in. (150 mm) above finished floor unless otherwise indicated. Where indicated on both sides of doorways, route bus up to top of door frame, across top of doorway, and down; connect to horizontal bus.

5.3. **Conductor Terminations and Connections.** For pipe and equipment grounding conductor terminations, use bolted connectors. For underground connections, use welded connectors except at test wells and as otherwise indicated. Use bolted connectors when connecting to ground rods at test wells. Use welded connectors when connecting to structural steel.

5.4. **Grounding at the Service**. Connect equipment grounding conductors and grounding electrode conductors to the ground bus. Install a main bonding jumper between the neutral and ground buses.

5.5. **Grounding Separately Derived Systems.** Generator: Install grounding electrodes at the generator location. Connect the electrode to the equipment grounding conductor and to the frame of the generator.

5.6. **Grounding Underground Distribution System Components.** Comply with IEEEC2 grounding requirements

5.7. **Grounding Manholes and Handholes.** Install a driven ground rod through manhole or handhole floor, close to wall, and set rod depth so 4 in. (100 mm) will extend above finished floor. If necessary, install ground rod before manhole is placed and provide No. 1/0 AWG bare, tinned-copper conductor from ground rod into manhole through a waterproof sleeve in manhole wall. Protect ground rods passing through concrete floor with a double wrapping of pressure-sensitive insulating tape or heat-shrunk insulating sleeve from 2 in. (50mm) above to 6 in. (150 mm) below concrete. Seal floor opening with waterproof, non-shrink grout.

5.8. **Grounding Connections to Manhole Components.** Bond exposed-metal parts such as inserts, cable racks, pulling irons, ladders, and cable shields within each manhole or handhole, to ground rod or grounding conductor. Make connections with No. 4 AWG minimum, stranded, hard-drawn copper bonding conductor. Train conductors to be level or plumb around corners and fasten to manhole walls. Connect to cable armor and cable shields according to written instructions by manufacturer of splicing and termination kits.

5.9. **Pad-Mounted Transformers and Switches.** Ground utility provided equipment per ONCOR grounding standards.

5.10. **Equipment Grounding.** Install insulated equipment grounding conductors with all feeders and branch circuits.

5.11. **Fence Grounding.** For fences that enclose electrical power distribution equipment, ground as required by IEEEC2 unless otherwise indicated.

5.12. **Installation.** Perform installation in accordance with the requirements provided below.

5.12.1. **Grounding Conductors.** Route along shortest and straightest paths possible unless otherwise indicated or required by Code. Avoid obstructing access or placing conductors where they may be subjected to strain, impact, or damage.

5.12.2. **Ground Bonding Common with Lightning Protection System.** Comply with NFPA 780 and UL 96 when interconnecting with lightning protection system. Bond electrical power system ground directly to lightning protection system grounding conductor at closest point to electrical service grounding electrode. Use bonding conductor sized same as system grounding electrode conductor and install in conduit.

5.12.3. **Ground Rods.** Drive rods until tops are 2 in. (50 mm) below finished floor or final grade unless otherwise indicated. Interconnect ground rods with grounding electrode conductor below grade and as otherwise indicated. Make connections without exposing steel or damaging coating if any.

5.12.4. **Bonding Straps and Jumpers.** Install in locations accessible for inspection and maintenance except where routed through short lengths of conduit.

5.12.5. **Bonding to Structure**. Bond straps directly to basic structure, taking care not to penetrate any adjacent parts.

5.12.6. **Bonding to Equipment Mounted on Vibration Isolation Hangers and Supports.** Install bonding so vibration is not transmitted to rigidly mounted equipment.

5.13. **Outdoor Locations.** Use exothermic-welded connectors for outdoor locations; if a disconnect-type connection is required, use a bolted clamp.

5.14. **Field Quality Control**. Perform tests and inspections. Consider the grounding system defective if it does not pass tests and inspections. After installing grounding system, but before permanent electrical circuits have been energized, test for compliance with requirements. Inspect physical and mechanical condition. Verify tightness of accessible, bolted, electrical connections with a calibrated torque wrench according to manufacturer's written instructions.

Test completed grounding system at each location where a maximum ground-resistance level is specified, at service disconnect enclosure grounding terminal, at ground test wells, and at individual ground rods. Perform tests at ground rods before any conductors are connected. Testing must measure ground resistance no fewer than 2 full days after last trace of precipitation and without soil being moistened by any means other than natural drainage or seepage and without chemical treatment or other artificial means of reducing natural ground resistance, and perform tests by fall-of-potential method according to IEEE 81.

Prepare test and inspection reports. Include measured ground resistances that exceed the following values:

- 10 ohms for power and lighting equipment or system with capacity of 500 kVA and less,
- 5 ohms for power and lighting equipment or system with capacity of 500 to 1000 kVA,
- 3 ohms for power and lighting equipment or system with capacity more than 1000 kVA,
- 3 ohms for power distribution units or panelboards serving electronic equipment,
- 5 ohms for substations and pad-mounted equipment, and
- 10 ohms for manhole grounds.

5.15. Excessive Ground Resistance. If resistance to ground exceeds specified values, notify the Engineer promptly and include recommendations to reduce ground resistance.

5.16. Quality Assurance. Include testing agency qualifications on the submittal. The testing agency must be certified by NETA.

6. MEASUREMENT AND PAYMENT

6.1. The work performed, materials, labor, tools, shop drawings, operational testing, and incidentals will not be measured or paid for directly but will be subsidiary to pertinent Items.

Special Specification 7340
Fabric Shade Canopies

1. DESCRIPTION

Furnish labor, materials, and equipment to install fabric shade canopy structures in accordance with these Specifications and the details and locations shown on the plans. The fabric shade canopy structure must consist of a metal roof supported by steel tube beam-column frames.

2. MATERIALS

Furnish new and unused materials for this project unless otherwise specified on the plans.

Provide sun-shade fabric for exterior use and tensile type structure support. Fabric sun-shade system to include all hardware and attachments required per design.

2.1. ASTM D751 - Standard Test Methods for Coated Fabrics.

2.2. ASTM D2136 - Standard Test Method for Coated Fabrics-Low-Temperature Bend Test.

2.3. ASTM D4533 - Standard Test Method for Trapezoid Tearing Strength of Geotextiles.

Fabric Sun-Shade system may include support posts if engineered design requires.

3. CONSTRUCTION

3.1. **Submittals:** For each type of product submit product data.

3.2. **Shop Drawings:** Include details of materials, construction, and finish. Include relationship with adjacent construction.

3.2.1. Show layout of fabric shade sails and the point of tensile connection.

3.2.2. Show tensile support system to include fabric to tensile system hardware and attachment to stable support.

3.3. **Samples:** Provide samples of each exposed fabric material used on shade sails.

3.4. **Delegated Design Submittal:** For the tensile structure type fabric shade canopy system and supporting anchors including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

3.5. **Quality Assurance:**

3.5.1. For Manufacturer: Company specializing in manufacturing products specified in this section with a minimum five years documented experience.

3.5.2. For Installer: Company specializing in performing Work of this section with minimum two years documented experience with projects of similar scope and complexity.

3.5.3. For Delegated Designer: For professional engineer's experience with providing delegated-design engineering services of the kind indicated, including documentation that the engineer is licensed in the State in which Project is located.

3.6. **Delivery, Storage, and Handling:** Store and handle material and product in strict compliance with manufacturer's written instructions and recommendations. Protect from damage due to excessive temperature, and construction operations.

3.7. **Fabrication:**

3.7.1. Shade canopy shape, size and layout per approved shop drawings and made of manufacturers standard fabric for exterior extreme weather conditions.

3.7.2. Fabric properties to comply to testing for trapezoid tear, grab tensile, strip tensile, hydrostatic resistance, and dead load seam strength per ASTM standards.

3.7.3. Fabric color as selected by design team from manufacturer's standard range.

3.7.4. Fasteners and hardware of non-corrosive material. Non-staining bolts, shims and accessory items.

3.8. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:

3.8.1. Lawrence Fabric & Metal Structures
3.8.2. Miami Awning
3.8.3. ShadeSails.com LLC
3.8.4. Landscape Structures Inc.
3.8.5. USA Shade
3.8.6. Superior Shade

4. MEASUREMENT

For the basis of the schedule of values, this Item will be measured by each canopy structure, complete as shown on the plans.

5. PAYMENT

The work performed, materials furnished, equipment, labor, tools, and incidentals to complete this work in accordance with this Item and measured as provided under "Measurement" will not be paid for directly, but will be subsidiary to the lump sum unit price bid.

December 22, 2021

Michael Shannon
Galveston County Engineer
722 Moody
Galveston, Texas 77550

Dear Mr. Shannon:

Thank you for your letter, dated December 9, 2021, regarding Galveston County's[1] proposed Bay Side Improvements Project at Rollover Pass and its on-going consultation with the U. S. Fish and Wildlife Service (Service) pursuant to Section 7 of the Endangered Species Act. The subject project involves the construction of a bayside waterfront recreational park. The approximate 8-acre project site includes a shade pavilion, bird observation tower, picnic tables, trash receptacles, bike racks, educational signage, a gravel parking lot, American Disabilities Act-compliant decomposed granite or pervious walking paths, exercise stations with equipment and associated lighting for public use. The project is located adjacent to the south side of Rollover Bay, north of Highway 87, in Gilchrist, Galveston County, Texas. Galveston County is requesting concurrence with a may affect not likely to adversely affect determination for the threatened piping plover *(Charadrius melodus*) and red knot (*Calidris canutus rufa)*.

Galveston County has determined that its proposed project will have no effect on: West Indian Manatee (*Trichechus manatus),* Attwater's greater prairie chicken (*Tympanuchus cupido attwateri),* eastern black rail (*Laterallus jamaicensis ssp. jamaicensis*), leatherback sea turtle (*Dermochelys coriace),* hawksbill sea turtle (*Eretmochelys imbricate)*, loggerhead sea turtle (*Caretta caretta)*, green sea turtle (*Chelonia mydas),* Kemp's ridley sea turtle (*Lepidochelys kempii)* and piping plover *(Charadrius melodus)* critical habitat. No additional coordination with the Service is necessary for these species.

The Service concurs that the proposed project is not likely to adversely affect the federally

[1] Galveston County is the designated non-federal representative for the U.S. Department of Housing and Urban Development for this project.

listed piping plover (PIPL) and red knot (REKN). This concurrence is based on a review of Service files, e-mail correspondence, written correspondence, conference calls, and the implementation of the following avoidance and minimization measures.

AVOIDANCE AND MINIMIZATION MEASURES

- PIPL critical habitat (e.g., the project area adjacent to the bayside shoreline) will be avoided with a minimum of a 25 meter (82ft) buffer. The exception to this distance is the planned birding observation tower, which will be elevated and positioned to minimize disturbance to birds utilizing the area.
- Project boundaries and associated buffers will be marked to avoid impacts to PIPL critical habitat.
- Project equipment and materials will be staged and/or stored adjacent to roadways, i.e. Hwy 87.
- The use of construction lighting will be minimized, directed toward the construction activity area, and shielded from view outside of the project area to the maximum extent practicable.
- Permanent lighting will be minimized, directed toward the project area (i.e., pointed away from Rollover Bay and other PIPL and REKN habitat), be down shielded and shielded from view outside of the project area, and will follow the Dark Skies[2] or Texas Bird City guidelines for lighting[3] to the maximum extent feasible.
- Avoid construction of any high structures that may attract raptors (prey on shorebirds). If such structures are necessary, bird diverters (raptor diverters) will be used.
- A designated qualified wildlife monitor will be identified and will act as the single point of contact responsible for communication and reporting endangered species issues throughout construction of the project.
- All construction crewmembers, qualified wildlife monitor, and on all site project managers will attended training in PIPL and REKN recognition prior to the initiation of, or their participation in, project work activities. Training will be conducted by a qualified biologist[4] and include 1) recognition of PIPL and REKN 2) project avoidance measures 3) reporting criteria 4) contact information for different rescue agencies in the area.
- The project proponents will ensure a qualified monitor trained in the recognition of piping plovers and red knots will survey the work area for the presence of these species prior to the start of construction activities each day.
- If a PIPL or REKN is observed in the active construction area, work will be stopped until the bird(s) leave the site.
- Public outreach will be initiated to educate park users about the PIPL and REKN by

[3] https://tpwd.texas.gov/wildlife/birding/bird-city-texas/certifiedcommunities/galveston

[4] contact the Service for guidance on training with a qualified biologist

installing public education signs along the trail and birding area.

In the event the project changes or additional information on listed or proposed species becomes available, the project should be reanalyzed for effects not previously considered. If you have any questions, or need additional information, please contact staff biologist Moni Belton at 281-212-1512 or Moni_Belton@fws.gov.

Sincerely,

Charles Ardizzone
Field Supervisor

COMMUNITY DEVELOPMENT & REVITALIZATION
The Texas General Land Office
Appointment of Labor Standards Officer

Subrecipient:	Galveston County	Contract Number:	16-209-000-9676

Labor Standards Officer:

I, Mark Henry (County Judge) hereby appoint Nancy Baher

Name of Mayor/County Judge — Name of Designated Officer

as the Labor Standards Officer for the aforementioned contract. The appointed Labor Standards Officer is assigned to oversee the labor portion of the contract and will be responsible for assuring compliance with all requirements under Title I of the Housing and Community Development Act of 1974 which requires the payment of Davis-Bacon Act prevailing wage rates (which are determined by the DOL) to all workers on GLO-CDR construction projects exceeding $2,000 (42 USC §5310) and all other governing regulations.

The appointed Labor Standards Officer's contact information is:

722 Moody, Galveston TX 77550	
Address, City, State, and Zip Code

The Honorable Mark Henry
Galveston County Judge
722 Moody Ave
Galveston, Texas 77550

RE: Request for Waiver or Refund of Penalty and Interest Due to Clerical Errors as Recommended by Penalty & Interest Review Committee

Dear Judge Henry:

The Penalty & Interest Review Committee met on October 14, 2025, and based on a review of all available information, request approval of waivers or refunds listed below due to clerical errors on the part of the Tax Office, agent of the Tax Office or Galveston Central Appraisal District as provided by Section 33.011 of the Texas Property Tax Code. Signed copies of the Committee Findings and Recommendation are included for your convenience.

Account Number	Property Owner	Tax Year	Amount of Waiver or Refund
519617	Seawall Tuscan Villas	2021	$2,145.67 (W)
519617	Seawall Tuscan Villas	2022	$2,324.04 (W)
519617	Seawall Tuscan Villas	2023	$2,420.49 (W)
519617	Seawall Tuscan Villas	2024	$2,151.06 (W)

TRI-PARTY ELEVATION ENGINEERING AGREEMENT

Texas Division of Emergency Management
Hazard Mitigation Grant Program (HMGP)
Awarding Federal Agency: Federal Emergency Management Agency
Contract Number: DR-4332-0025 & 0239

INTRODUCTION OF CONTRACT PARTIES

This Tri-Party Elevation Engineering Agreement (further known as AGREEMENT) is made by, between, and among the **County of Galveston, Texas** (further known as COUNTY),

Dean R. Chiles (further known as PROPERTY OWNER) and **Aran & Franklin Engineering, Inc.** (further known as ENGINEER), each of whom is a PARTY to this agreement and who are collectively further known as the PARTIES, and this agreement is effective upon the full execution of this AGREEMENT with the date of the last PARTY's signature.

This AGREEMENT pertains solely to engineering services under the HMGP program and does not include construction services.

PROPERTY OWNER
All persons and/or entities listed on the official real property Title/Deed filed at the Galveston County Clerk's Office must sign and acknowledge receipt of this agreement and any associated communications.

All owners listed on the deed must be verified through official property records prior to execution. Title/Deed for the PROPERTY lists the following as the official address for the property:

> LOT THIRTY (30) OF BAYOU VISTA ADDITION NO. TWO (2), A SUBDIVISION IN GALVESTON COUNTY, TEXAS ACCORDING TO THE MAP OR PLAT THEREOF RECORDED IN VOLUME 254-A, PAGE 78, IN THE OFFICE OF THE COUNTY CLERK OF GALVESTON COUNTY, TEXAS.

Title/Deed for the PROPERTY lists the following person(s)/entity(s) name(s):

Dean R. Chiles

In exchange for the mutual promises contained in this agreement, and other good and valuable considerations, the receipt and sufficiency of which are hereby acknowledged and confessed, the PARTIES agree to the following:

ARTICLE I. DESCRIPTION OF PROFESSIONAL SERVICES

ENGINEER shall perform professional services associated with testing and engineering design for the structure located at **30 Lakeside Dr, Hitchcock, TX 77563**, as described in EXHIBIT A – ENGINEER'S COST ESTIMATE.

The NOTICE TO PROCEED shall be issued after a Purchase Order for this property has been issued by the COUNTY's Purchasing Agent.
The services shall be provided subject to the terms and conditions of this AGREEMENT and the contract between the COUNTY and the ENGINEER attached as EXHIBIT B.

ARTICLE II. ADMINISTRATIVE CONTACTS

The following persons are designated by each respective PARTY to serve as the PARTY's contact for purposes of administering this AGREEMENT:

GALVESTON COUNTY:

Elizabeth (Betsy) Thomas
722 Moody, 3rd Floor
Galveston, Texas 77550
409-770-5355
Elizabeth.thomas@co.galveston.tx.us

COUNTY AGENT:

Faisel Nofal
722 Moody, 3rd Floor
Galveston, Texas 77550
409-770-2497
Faisel.nofal@galvestoncountytx.gov

Aran & Franklin Engineering, Inc.

Chandra Franklin Womack, PE
8419 Emmett F Lowry Expressway
Texas City, TX 77591
409-935-5200
chandra@aranfranklin.com

COUNTY AGENT:

Rebecca Whitlock, GrantWorks
2201 Northland Drive
Austin, Texas 78756
346-471-5828
rebecca.whitlock@grantworks.net

PROPERTY OWNER ADMINISTRATIVE CONTACT(S)*:

Name(s): Dean Chiles
Address: 30 Lakeside Dr, Hitchcock, Tx 77563
Phone: 409-457-2819 409-771-5052
Email: chilesdean@gmail.com

*Only those persons/entities listed within the real property records on file in the Office of the Galveston County Clerk as a Grantee of the PROPERTY may serve as the PROPERTY OWNER'S designated contact(s) under the AGREEMENT. If the PROPERTY OWNER's wish to designate any other person, the PROPERTY OWNER must provide a certified copy of a Power of Attorney covering such transaction to the COUNTY or provide a certified copy of Letters of Appointment as Guardian of the Estate covering the person listed as the Grantee of the PROPERTY. Such certified documents must be on file with the COUNTY prior to the execution of this AGREEMENT and a copy attached as EXHIBIT C.

ARTICLE III. ACRONYMS AND DEFINITIONS

A. Acronyms. The following acronyms have the meanings ascribed below for the purpose of this AGREEMENT:

1. ADA means the American with Disabilities Act and implementing regulations.
2. FEMA means the United States Department of Homeland Security Federal Emergency Management Agency.
3. GSA means the United States General Services Administration.
4. HMA Unified Guidance means the Hazard Mitigation Assistance Unified Guidance published June 1, 2010, by FEMA, which governs HMGP program implementation requirements.
5. ICC means Increased Cost of Compliance and refers to the coverage under the National Flood Insurance Program.

Docusign Envelope ID: BA0D84D0-A9EF-4A40-8A17-B2EFF39C6775

6. NFIA means the National Flood Insurance Act of 1968, as amended.
7. NFIP means the National Flood Insurance Program.
8. HMGP means the Hazard Mitigation Grant Program.
9. TDEM means the Texas Division of Emergency Management.
10. TWIA means the Texas Windstorm Insurance Association.

B. Definitions. The following terms shall have the meanings ascribed herein for the purposes of this AGREEMENT. Defined terms are also indicated by the use of all capitalized letters or parenthesis.

1. **AGREEMENT** means this Tri-Party Elevation Engineering Agreement. All EXHIBITS attached hereto are incorporated into and made a part of this AGREEMENT. The following EXHIBITS are included:
    a. EXHIBIT A. ENGINEER'S COST ESTIMATE
    b. EXHIBIT B. Contract between the COUNTY and ENGINEER
    c. EXHIBIT C. Any applicable Power of Attorney or Letters of Appointment as Guardian of Estate
    d. EXHIBIT D. DUTY TO INFORM form from PROPERTY OWNER
    e. EXHIBIT E. Blank FEMA Elevation Certificate and Instruction (2012 Edition) (FEMA Form 086-0-33) as an example.
    f. EXHIBIT F. EXAMPLE - MITIGATION OFFER/Declination Notice
    g. EXHIBIT G. TDEM-specific clauses
    h. EXHIBIT H. FEMA Record of Environmental Consideration
    i. EXHIBIT I. Sample Engineering and Construction Schedule
    j. EXHIBIT J. Mobility Accommodation Documentation
    k. EXHIBIT K. Conflict of Interest Disclosure
    l. EXHIBIT L. Model Acknowledgement of Conditions
    m. EXHIBIT M. Galveston County Appraisal Document

2. **CHANGE ORDER** means any change to the elements of this AGREEMENT, which requires review, agreement, and signature by all three PARTIES: the COUNTY, the ENGINEER, and the PROPERTY OWNER.

3. **COMMENCEMENT DATE** means the date represented on the NOTICE TO PROCEED from the COUNTY to the ENGINEER, which **marks the official start of the engineer-design process as authorized by the COUNTY. The NOTICE TO PROCEED will not be issued until the COUNTY's Purchasing Agent has approved and issued a Purchase Order.**

4. **COMPLETION DATE** means the expected date the engineering design will be complete. Any additional time needed for engineering design will require a CHANGE ORDER to this agreement. All extensions must be reviewed and approved by the COUNTY.

5. **COUNTY** means the County of Galveston, Texas, a political subdivision of the State of Texas, **serving as the subrecipient under TDEM and providing program oversight through its contracted grant administrator**.

6. **COUNTY AGENT** means any person, department, or contractor assigned or authorized by the COUNTY to perform duties under this AGREEMENT, including grant administration.

Docusign Envelope ID: BA0D84D0-A9EF-4A40-8A17-B2EFF39C6775

7. **ENGINEERING COST ESTIMATE** means the **projected amount** from the ENGINEER to inspect, assess, test, and **design the FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS** for the PROPERTY.

8. **ENVIRONMENTAL STANDARDS** means the applicable environmental standards established under 1) the National Environmental Policy Act of 1969 (P.L. 91-190) and Executive Order 11514; 2) notification of violating facilities pursuant to Executive Order 11738; 3) protection of wetlands pursuant to Executive Order 11990; 4) the Clean Air Act of 1970, as amended, 42 U.S.C. 7401 et seq; 5) the Federal Water Pollution Control Act, as amended, 33 U.S.C. 1251, et. Seq.; 6) Environmental Protection Agency regulations, 40 CFR, Part 50, as amended; 7) protection of underground sources of drinking water under the Safe Drinking Water Act of 1974, as amended (P.L. 93-523); and 8) protection of endangered species under the Endangered Species Act of 1973, as amended (P.L. 93-205), as applicable to engineering-related assessments and documentation under this AGREEMENT.

9. **FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS** means the engineered design from the ENGINEER for an individual property that has been reviewed, approved, **sealed by the licensed ENGINEER**, and signed by **an authorized representative of the COUNTY**. The plans **must not include any design elements outside the scope of work approved in the grant agreement**.

10. **FINAL COMPLETION** means the point when the ENGINEER has fulfilled all obligations under this AGREEMENT and the FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS have been accepted by an authorized representative of the COUNTY. The plans must not include any design elements outside the scope of work approved by the grant agreement. Final Completion occurs when the following have been completed and submitted to the COUNTY:
    a. Engineering deliverables outlined in the FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS.

    b. All field reports, inspection notes, and verification of engineered recommendations provided.

    c. A complete list of any subcontractors or third-party professionals who performed work on, or contributed to, the engineering deliverables.

    d. Confirmation that all utilities and access conditions relevant to the design scope were properly assessed.

    e. A preliminary elevation certificate or benchmark recommendation may be included by the ENGINEER, but the final FEMA Elevation Certificate (FEMA Form 086-0-33; see EXHIBIT E) will be provided post-construction.

    f. Any additional items specifically required by the COUNTY under this AGREEMENT.

11. **FULL ELEVATION CONTRACT AMOUNT** means the total amount for both phases:

    a. the **ENGINEERING PHASE**, which includes initial inspections, testing, and the development of the **FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS**; and

Docusign Envelope ID: BA0D84D0-A9EF-4A40-8A17-B2EFF39C6775

b. the **CONSTRUCTION PHASE**, which includes the bidding process, assessments, and elevation of the structure as identified in the **FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS** produced during Phase One.

This amount does not include any work beyond the FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS

12. **IMPROVEMENTS** mean the structure and related improvements on the PROPERTY that are eligible for elevation under the HMGP grant program guidelines, as outlined in the FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS. The HMGP grant program guidelines state elevation of a structure may consist of the following:
    a. Slab elevation.
    b. Slab separation and elevation.
    c. Pier and beam elevation.
    d. Piling and beam elevation.
    e. Demolition/Removal.
    f. Engineering Design.
    g. Construction, and/or
    h. Other required items as specified in the FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS.

13. **MATCH AMOUNT** means the 25% match required to be paid by the PROPERTY OWNER as required by the HMGP grant guidelines.

14. **MITIGATION OFFER** means the amount equal-to the "Total Budgeted PROJECT HARD COSTS minus NON-ELEVATION COSTS" as described in the FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS, in accordance with the terms and condition of this AGREEMENT. The price for specific items of work will be stated in the FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS.

15. **MODEL ACKNOWLEDGEMENT OF CONDITIONS FOR MITIGATION OF PROPERTY IN A SPECIAL FLOOD HAZARD AREA** means the mandatory form recorded with the property deed that confirms the PROPERTY OWNER's acceptance of grant program conditions, including the ongoing requirement to maintain National Flood Insurance Program (NFIP) coverage and comply with applicable floodplain management regulations.

16. **NON-ELEVATION COSTS** mean costs related to assessments, inspections, or recommendations made by the ENGINEER that are **outside the FEMA-approved scope** for elevation under the HMGP program. These may include recommendations for cosmetic repairs, remodels, additions, or unrelated code upgrades that are not essential to the elevation design. Such costs are **not reimbursable** under the HMGP grant and must be excluded from the FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS.

17. **NOTICE TO TEMPORARILY VACATE** means the notice to PROPERTY OWNER once the ELEVATION CONSTRUCTION CONTRACTOR has been awarded for the IMPROVEMENTS and they notify the COUNTY they will be ready to commence with construction within thirty (30) days.

18. **PRIMARY RESIDENCE** means a dwelling that the PROPERTY OWNER has actually lived in for eighty percent (80%) of the prior consecutive 365 days or eighty percent (80%) of the period of

Docusign Envelope ID: BA0D84D0-A9EF-4A40-8A17-B2EFF39C6775

ownership if the period of ownership is less than 365 days. Evidence of PRIMARY RESIDENCE may be established by providing copies of current driver's license, homestead exemption and/or like documents.

19. **PROGRAM** means the Galveston County Hazard Mitigation Grant Program (HMGP) where the COUNTY and the Texas Division of Emergency Management (TDEM) entered into contract number(s) DR-4332-0025 and DR-4332-0239 for the administration of this elevation grant program.

20. **PROJECT HARD COSTS** mean the total cost of the project including ELEVATION and NON-ELEVATION COSTS as identified in the FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS as well as TEMPORARY HOUSING.

21. **PROPERTY** means a specified parcel of real property that is the site of the structure to be elevated and includes the real property (land), the structure (e.g., home) and other improvements on the real property parcel.

22. **PROPERTY OWNER** means the eligible applicant(s) and recipient of the HMGP Elevation grant funds under this AGREEMENT as identified in the Introduction and Article II: Administrative Contacts of this AGREEMENT.

23. **RFQ** means **Request for Qualifications #B242004 issued by Galveston County** for the purpose of selecting and contracting with the ENGINEER to perform eligible engineering services under this AGREEMENT.

24. **TEMPORARY HOUSING** means a place to live for a limited period of time and for the purposes of this AGREEMENT and means the lodging costs incurred by the PROPERTY OWNER during the period of time that the PROPERTY OWNER is displaced from their PRIMARY RESIDENCE due to eligible elevation activities directly associated with this PROGRAM. TEMPORARY HOUSING is eligible for reimbursement to the PROPERTY OWNER only if the PROPERTY is proven to be the PRIMARY RESIDENCE of the PROPERTY OWNER and the costs are directly attributable to the period of time the PROPERTY OWNER is displaced from the PRIMARY RESIDENCE due to eligible activities directly associated with the FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS but does not include food, transportation costs or time associated with the activities associated with any NON-ELEVATION COSTS. TEMPORARY HOUSING costs eligible for reimbursement under the HMGP grant program are limited to reasonable lodging expenses and must be supported by receipts and proof of payment submitted by the PROPERTY OWNER to the COUNTY. These costs are eligible for **75% reimbursement through the HMGP grant**, with the **remaining 25% to be paid by the PROPERTY OWNER** as required by the program's cost-share requirements. TEMPORARY HOUSING costs are considered reasonable if the amounts are less than or equal to the per diem lodging rates established by the U.S. General Services Administration (GSA) for the WORKSITE location.

25. **WORK ORDER** means the work detail and project cost as defined in the FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS.

26. **WORKSITE** means the site within the PROPERTY where the elevation is occurring and any surrounding area within the PROPERTY necessary for the ELEVATION CONSTRUCTION CONTRACTOR's ingress to or egress from the property (entry or exit) to perform the elevation

Docusign Envelope ID: BA0D84D0-A9EF-4A40-8A17-B2EFF39C6775

activities as defined in the FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS.

ARTICLE IV. ENGINEERING SERVICES COST SHARING AND PAYMENT SCHEDULE

This Article outlines the engineering-related financial obligations only and does not authorize or initiate construction activities. See EXHIBIT A.

1. Financial Summary:

ENGINEERING COST ESTIMATE	$ 18,200
COUNTY's Financial Responsibility (75%)	$ 13,650
PROPERTY OWNER MATCH AMOUNT (25%)	$ 4,550

2. Payments from PROPERTY OWNER
   a. Payment of the required 25% match from the PROPERTY OWNER in the form of a cashier's check is due at the time this AGREEMENT is signed. Payments will be deposited in a designated account at the COUNTY and a NOTICE TO PROCEED will be issued to the ENGINEER, which will allow the ENGINEER to proceed with inspections, assessments, testing and engineering activities.

ARTICLE V. PROPERTY OWNER'S OBLIGATIONS

A. **MATCH AMOUNT**: As outlined in Article IV, the required 25% match must be paid by the Property Owner at the time of agreement execution.

B. **REIMBURSEMENT**: If it is determined through assessments, inspections, and testing that the structure is not suitable for elevation, the ENGINEER will notify the COUNTY. The COUNTY will, in turn, notify the PROPERTY OWNER. A portion of the MATCH AMOUNT paid by the PROPERTY OWNER may be eligible for reimbursement, subject to COUNTY review and approval, depending on the stage of engineering services performed and allowable costs under the HMGP grant.

C. **MAINTAIN NFIP INSURANCE: The PROPERTY OWNER agrees to maintain flood insurance through the National Flood Insurance Program (NFIP) and not through private flood insurance programs, to insure against the loss of the real property in an amount at least equal to the project cost or assessed value of the real property (whichever is higher), and up to the NFIP maximum of $250,000.**

D. The PROPERTY OWNER acknowledges and agrees that the following notice of NFIP flood insurance requirements shall be legally recorded in the Official Real Property Records of the Galveston County Clerk's Office and will include: 1) The name of the current PROPERTY OWNER, 2) The book and page reference to record the current title, and 3) The legal description of the PROPERTY, and will state the following:

> "This property has received Federal Hazard Mitigation Assistance. Federal Law requires that NFIP flood insurance coverage on this property must be maintained during the life of the property regardless of transfer of ownership of such property. Pursuant to 42 U.S.C. 515a, failure to maintain flood insurance on this property may prohibit the owner from receiving Federal disaster assistance with respect to this property in the event of a flood disaster. The property owner is also required to maintain this property in accordance with

Docusign Envelope ID: BA0D84D0-A9EF-4A40-8A17-B2EFF39C6775

the floodplain management criteria of 44 CFR Part 60.3 and City/County Ordinance/Order."

DC Initial

Failure to comply with the NFIP insurance requirement may result in a lien on the PROPERTY.

PROPERTY OWNER: DO NOT SIGN THIS AGREEMENT IF YOU DO NOT FULLY UNDERSTAND THIS PROVISION

E. **TAXES**: PROPERTY OWNER shall pay all real estate taxes and assessments of every kind on PROPERTY before they become delinquent. The COUNTY may require, at any time, that the PROPERTY OWNER provides evidence that taxes have been paid and are current. Property taxes must either:

1. Be paid in full and current,
2. Be under a formal deferral, or
3. Be under an active and current payment plan with the Galveston County Tax Assessor and Collector.

This ensures the PROPERTY OWNER remains eligible to move forward in the PROGRAM.

F. **COOPERATION**: PROPERTY OWNER will cooperate with the reasonable requests of the ENGINEER, COUNTY, COUNTY AGENTS and TDEM regarding requests related to activities required to develop the FINAL APPROVED ENGINEERING PLANS AND SPECIFICAITONS. Such requests include access to the property for inspections, assessments, testing, and any required site visits or progress reviews by the COUNTY and COUNTY AGENT.

G. **DUTY TO INFORM**: PROPERTY OWNER is responsible for informing the ENGINEER of any known PROPERTY hazards including but not limited to:

Hazard	Present	Not-Present	Unknown
Asbestos			
Lead Paint			
Buried Lines			
Septic Systems			
Water Wells			
Bees			
Propane Tanks			
Sinkholes			
Other (specify):			

The PROPERTY OWNER shall disclose any conditions that could impact testing, design, or field operations. This section references the responses provided by the PROPERTY OWNER on the DUTY TO INFORM form included as EXHIBIT D.

H. **MEDICAL NEEDS**: PROPERTY OWNER is responsible for notifying ENGINEER before signing this AGREEMENT of any medical issues in the family which could entitle the PROPERT OWNER to special types of accessibility accommodations. In a case where the PROPERTY OWNER or a member of the PROPERTY OWNER's family has a permanent physical disability,

Docusign Envelope ID: BA0D84D0-A9EF-4A40-8A17-B2EFF39C6775

the floodplain management criteria of 44 CFR Part 60.3 and City/County Ordinance/Order."

_____Initial

Failure to comply with the NFIP insurance requirement may result in a lien on the PROPERTY.

PROPERTY OWNER: DO NOT SIGN THIS AGREEMENT IF YOU DO NOT FULLY UNDERSTAND THIS PROVISION

E. **TAXES**: PROPERTY OWNER shall pay all real estate taxes and assessments of every kind on PROPERTY before they become delinquent. The COUNTY may require, at any time, that the PROPERTY OWNER provides evidence that taxes have been paid and are current. Property taxes must either:

1. Be paid in full and current,
2. Be under a formal deferral, or
3. Be under an active and current payment plan with the Galveston County Tax Assessor and Collector.

This ensures the PROPERTY OWNER remains eligible to move forward in the PROGRAM.

F. **COOPERATION**: PROPERTY OWNER will cooperate with the reasonable requests of the ENGINEER, COUNTY, COUNTY AGENTS and TDEM regarding requests related to activities required to develop the FINAL APPROVED ENGINEERING PLANS AND SPECIFICAITONS. Such requests include access to the property for inspections, assessments, testing, and any required site visits or progress reviews by the COUNTY and COUNTY AGENT.

G. **DUTY TO INFORM**: PROPERTY OWNER is responsible for informing the ENGINEER of any known PROPERTY hazards including but not limited to:

Hazard	Present	Not-Present	Unknown
Asbestos			
Lead Paint			
Buried Lines			
Septic Systems			
Water Wells			
Bees			
Propane Tanks			
Sinkholes			
Other (specify):			

The PROPERTY OWNER shall disclose any conditions that could impact testing, design, or field operations. This section references the responses provided by the PROPERTY OWNER on the DUTY TO INFORM form included as EXHIBIT D.

H. **MEDICAL NEEDS**: PROPERTY OWNER is responsible for notifying ENGINEER before signing this AGREEMENT of any medical issues in the family which could entitle the PROPERT OWNER to special types of accessibility accommodations. In a case where the PROPERTY OWNER or a member of the PROPERTY OWNER's family has a permanent physical disability,

Docusign Envelope ID: BA0D84D0-A9EF-4A40-8A17-B2EFF39C6775

a licensed physician's written certification is required before handicapped/special needs access facilities can be allowed as an eligible cost of the project. See EXHIBIT J – Mobility Accommodation Documentation

I. **NO CHANGES TO THE FINAL APPROVED ENIGINERING PLAN AND SPECIFICAITONS:** PROPERTY OWNERS will have the opportunity to meet with the ENGINEER to discuss the engineered design of the elevation project. A final version with a rendering will be presented to the PROPERTY OWNER for review and any possible changes. Once the FINAL APPROVED ENGINEERING PLAN AND SPECIFICAITONS have been signed off on, no changes may be made without prior written approval from the COUNTY due to cost control and grant regulations. Any possible changes must be requested in writing and approved in writing by the COUNTY prior to implementation.NO EXTRAS: No unauthorized scope changes or additional services will be permitted from the ENGINEER without the COUNTY's prior written consent. This AGREEMENT pertains solely to engineering services. Any reference to construction or non-engineering activities is beyond the scope of this AGREEMENT and must be addressed separately through COUNTY approval.

J. **PRIOR LIEN HOLDER RIGHTS:** PROPERTY OWNER is required to certify by affidavit on EXHIBIT F the existence or non-existence of any prior lien (e.g., mortgage, deed of trust) on the PROPERTY. If such a lien exists, the PROPERTY OWNER must notify and obtain written consent from the lien holder before executing this AGREEMENT. PROPERTY OWNER further acknowledges that any existing lien on PROPERTY may include restrictions that prohibit the PROPERTY OWNER from entering into or performing this AGREEMENT. Failure to obtain such consent may constitute an event of default under the lien and could result in legal consequences, including foreclosure or loss of the PROPERTY. The COUNTY is not responsible for determining the existence of any lien or for securing consent from the lien holder. These responsibilities lie solely with the PROPERTY OWNER.

PROPERTY OWNER: DO NOT SIGN THIS AGREEMENT IF YOU DO NOT FULLY UNDERSTAND THIS PROVISION.

K. **PROPERTY OWNER'S REPRESENTATIONS:** PROPERTY OWNER represents the following to the COUNTY and ENGINEER:

1. PROPERTY OWNER is the fee simple owner of the PROPERTY – meaning they are the complete and total owner of the PROPERTY, which gives them the right to do anything they wish on the land as long as it falls within the established easements and zoning laws.
2. PROPERTY OWNER affirms that, aside from a standard mortgage or first-lien deed of trust, the PROPERTY is free from additional liens, claims, unpaid assessments, or encumbrances that may affect participation in this PROGRAM. If required, the PROPERTY OWNER shall assist the COUNTY in obtaining any necessary documentation or notifications from lienholders.
3. No written contract (or affidavit regarding an oral contract) related to the engineering design or elevation of all or any portion of the IMPROVEMENTS has been recorded in the Office of the County Clerk of Galveston County. The PROPERTY OWNER affirms that no third-party agreements exist that may conflict with the scope, intent, or funding requirements of this AGREEMENT.
4. All warranties, representations and certifications made, and all information and material submitted or caused to be submitted to the COUNTY in connection with the MITIGATION OFFER are true and correct, and there have been no material changes in or conditions

Docusign Envelope ID: BA0D84D0-A9EF-4A40-8A17-B2EFF39C6775

affecting any of such warranties, representations, certifications, material or information prior to the date of the signing of this contract.

5. All financial statements delivered to the COUNTY by or on behalf of the PROPERTY OWNER are each true and correct in all respects and there has been no material adverse change in such statements as of the date of the signing of this contract.
6. PROPERTY OWNER is solvent, is not bankrupt, has not committed any act of bankruptcy, and has no outstanding liens, suits, garnishments, bankruptcies, or court actions which could render them insolvent. If solvency concerns exist or a bankruptcy has occurred, the PROPERTY OWNER must have disclosed them to the COUNTY prior to signing, and the COUNTY must execute this AGREEMENT with full awareness of such disclosures.

L. **ASSIGNMENTS:** PROPERTY OWNER shall not assign or otherwise transfer this AGREEMENT, in whole or in part, without prior written approval of the COUNTY. If such consent is granted, the COUNTY may require that the original PROPERTY OWNER remain responsible for obligations under this AGREEMENT unless the COUNTY approves a full substitution of parties in writing.

In the event of the death or incapacitation of the PROPERTY OWNER, any successor in interest (e.g., heir, executor, or legal representative) must promptly notify the COUNTY and submit documentation of legal authority. Such successor shall be required to either:

(a) assume full responsibility under this AGREEMENT, subject to COUNTY approval; or
(b) formally withdraw from the PROGRAM under COUNTY-defined procedures, which may include reimbursement obligations if Federal funds have been expended.

M. **FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS** will be presented to the PROPERTY OWNER for review, acceptance, and execution at the completion of the engineering phase. If the PROPERTY OWNER **accepts**, they must return an executed copy of the FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS to the COUNTY within **seven (7) calendar days** of the ENGINEER's presentation.

If the PROPERTY OWNER **does not accept**, they must provide written notice to the COUNTY within the same seven (7) calendar day period, stating the reason(s) for non-acceptance.

No further actions by the COUNTY or ENGINEER will proceed without written acceptance of the FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS by the PROPERTY OWNER.In cases where no response is received within the allotted time, the COUNTY reserves the right to determine the next steps, which may include pausing the project, issuing a formal withdrawal notice, or offering a limited extension.

N. **INDEMNITY:** To the extent permitted by law, the PROPERTY OWNER agrees to indemnify, defend, and hold harmless the COUNTY, the State of Texas, the ENGINEER, and any designated COUNTY AGENT from and against any and all claims, damages, losses, or expenses (including reasonable attorneys' fees) arising out of or resulting from the PROPERTY OWNER's negligent acts, errors, or omissions under this AGREEMENT.

O. **STATE PROVISIONS: PROPERTY** OWNER must comply with all applicable provisions listed in EXHIBIT G (TDEM-Specific Clauses) of this AGREEMENT.

ARTICLE VI. ENGINEER OBLIGATIONS

Docusign Envelope ID: BA0D84D0-A9EF-4A40-8A17-B2EFF39C6775

A. **Standards of Elevation:** In addition to the other requirements of this AGREEMENT, the IMPROVEMENTS will be engineered in a good and professional manner, fit for their intended purpose, fully equipped with materials of high quality, strictly in accordance with each of the following, as applicable: (i) the WORK ORDER; (ii) the FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS; (iii) the RFQ; (iv) the Environmental Standards; (v) FEMA Floodplain regulations; (vi) if applicable, TWIA requirements, and (vii) all applicable federal, state, and local laws, rules and regulations including the International Residential Code (IRC) and Minimum Property Standards (MPS).

B. **No changes to the Scope of Work:** Once the FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS are reviewed, agreed-upon, and signed, no changes shall be made except with the prior written approval of the COUNTY. This AGREEMENT does not authorize construction activities. Any construction or material changes made by an ELEVATION CONSTRUCTION CONTRACTOR or subcontractor must be addressed under a separate construction agreement and are subject to COUNTY review and approval.

C. **Corrective Action:** If the ENGINEER identifies any issues based on the engineering scope that may affect the design, safety, or feasibility of elevation activities, the ENGINEER shall promptly notify the COUNTY and recommend corrective actions as appropriate. ENGINEER shall maintain a detailed record of all such issues, including documentation of any pre-existing damages observed during inspections or assessments. These damages must be clearly noted in the FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS. The PROPERTY OWNER will be required to sign off on this documentation to acknowledge the condition of the property prior to elevation construction.

D. **Records Retention:** ENGINEER shall keep and maintain all records associated with this AGREEMENT for a minimum of seven (7) years from the formal closure of the grant project with the State, or for the duration required by applicable Federal, State, or Local laws — whichever period is longer. ENGINEER shall allow the COUNTY reasonable access to the records in the ENGINEER's possession, custody, or control that the COUNTY deems necessary to assist in auditing the services, costs, and payments provided under this AGREEMENT. ENGINEER shall also allow reasonable access to representatives of the State of Texas granting agency, the Office of Inspector General, the General Accounting Office, and other applicable State or Federal agencies, as applicable, that such entities deem necessary to facilitate review by such agencies.

E. **Prompt Payment:** ENGINEER will promptly pay all subcontractors or third-party professionals associated with assessments, preliminary elevation certificates (if applicable), testing, and other services associated with the development of the FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS.

F. **Allocation of Profit:** ENGINEER agrees that any monies received pursuant to this AGREEMENT shall first be applied to the payment of all outstanding invoices from subcontractors or service providers involved in assessments, testing, or other engineering tasks, before any portion is applied to ENGINEER's overhead or profit.

G. **Debarment and Suspension:** ENGINEER certifies that it is not ineligible for participation in federal or state assistance programs under Executive Order 12549, Debarment and Suspension, or any other applicable federal responsibility matters. ENGINEER agrees to include this certification in all contracts between itself and any subcontractors associated with surveying, testing, or other activities conducted under this AGREEMENT. If at any time ENGINEER becomes noncompliant with Executive Order 12549 or other applicable regulations, it shall immediately notify the COUNTY in writing and refund any payments received under this AGREEMENT during the period of ineligibility.

Docusign Envelope ID: BA0D84D0-A9EF-4A40-8A17-B2EFF39C6775

H. **Equal Opportunity / Non-Discrimination:** ENGINEER agrees to comply with all applicable Federal, State, and Local regulations relating to equal opportunity for all persons, without discrimination based on race, color, religion, national origin, sex, familial status, disability, or veteran status. ENGINEER further agrees to include this certification in all contracts with subcontractors or third parties engaged in surveying, testing, or other services performed under this AGREEMENT.

I. **Assignment:** ENGINEER shall not assign or otherwise transfer this AGREEMENT in whole or in part without the prior written approval of the COUNTY acting by and through its Commissioners Court. Such consent, if granted, shall not relieve the ENGINEER of any of its responsibilities under this AGREEMENT. A violation of this prohibition shall be a material default under the AGREEMENT and grounds for immediate termination of this AGREEMENT.

J. Latent Site Conditions: Under no circumstances will the ENGINEER be responsible for any costs incurred with respect to hidden or unknown defects that exist at the project site. Any and all costs incurred by the ENGINEER in connection with identifying, addressing, or mitigating such latent or unknown conditions shall be recoverable by the ENGINEER, subject to prior written approval by the COUNTY.

K. **Indemnity:** To the extent permitted by law, the ENGINEER agrees to indemnify, defend, and hold harmless the COUNTY, the State of Texas, and the PROPERTY OWNER from and against any claims, liabilities, damages, or expenses incurred by the COUNTY or PROPERTY OWNER, to the extent caused by the ENGINEER's negligent acts, errors, or omissions in connection with the performance of this AGREEMENT.

L. **Note:** This AGREEMENT pertains solely to engineering services. Any references to construction activities in Article VI are for context or coordination purposes only. They do not expand the ENGINEER's scope, responsibilities, or liability to include construction services. All construction activities are governed under a separate agreement.

M. **Conflict of Interest Disclosure**: The ENGINEER has completed and submitted a Conflict-of-Interest Questionnaire (CIQ) as required under Chapter 176 of the Texas Local Government Code. The completed CIQ is attached to this AGREEMENT as Exhibit K and is incorporated herein by reference. The ENGINEER agrees to update the CIQ within seven (7) days of any event that would require a change in the information disclosed. This obligation remains in effect throughout the term of this AGREEMENT.

N. **DUE DILIGENCE RESPONSIBILITY:** ENGINEER is solely responsible for determining whether elevation activities will interfere with any recorded instrument, deed restriction, easement, or regulation affecting the PROPERTY. The COUNTY makes no warranty regarding title or encumbrances.

ARTICLE VII. GALVESTON COUNTY'S LIMITED OBLIGATIONS

A. Limited Obligation of COUNTY: The COUNTY's obligation to the PROPERTY OWNER and ENGINEER, or either of them, is limited to disbursing the MITIGATION OFFER amount in accordance with the terms and conditions of this AGREEMENT. No additional obligation or liability is implied or assumed by the COUNTY beyond this disbursement.

B. **Non-Responsibility of COUNTY for Third-Party Actions:** The COUNTY is not responsible for any of the following (this list is illustrative, and not exclusive):
   a. The quality or timing of the ENGINEER's services to develop the FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS;
   b. The quality or timing of the elevation construction;
   c. Resolution of disputes between the ENGINEER and PROPERTY OWNER;

Docusign Envelope ID: BA0D84D0-A9EF-4A40-8A17-B2EFF39C6775

d. Enforcement of this AGREEMENT, or any other agreement between the ENGINEER and the PROPERTY OWNER;
e. Payment of PROPERTY OWNER's funds to ENGINEER regarding excess engineering costs above the MITIGATION OFFER amount;
f. Removal of liens;
g. Curing title defects;
h. Acts or omissions of the ENGINEER, PROPERTY OWNER, or other contractor or supplier.

C. **Actions Do Not Create Duty:** The COUNTY's funding activities under the PROGRAM do not create a legal duty to the ENGINEER or the PROPERTY OWNER. The COUNTY's actions or inactions in making inspections of the PROPERTY, procuring sworn statements and waivers of liens, screening ENGINEER and PROPERTY OWNER, approving contracts and subcontracts, and approving the FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS will be taken by the COUNTY solely for its own protection. Except for the COUNTY's express obligations under this AGREEMENT, nothing herein shall be construed to create any obligation or liability on the part of the COUNTY to the ENGINEER, PROPERTY OWNER, or any other person with respect to any action, proper construction of the IMPROVEMENTS, performance of contracts or subcontracts by the ENGINEER or subcontractors, or prevention of claims for mechanic's liens.

D. **Limitation of Warranties:** To the fullest extent allowed by law, the COUNTY makes no warranties of any kind, express or implied, to the PROPERTY OWNER, and the PROPERTY OWNER waives all warranties and representations from the COUNTY, whether oral or written, whether expressed or implied, concerning the PROPERTY or IMPROVEMENTS, including, without limitation, any warranty of habitability, fitness for a particular purpose, or construction in a good and workmanlike manner. Nothing herein shall be construed to limit the ENGINEER's responsibilities to the PROPERTY OWNER.

ARTICLE VIII. DEFAULT AND REMEDIES

A. **ENGINEER Default:** ENGINEER will be in default under this AGREEMENT upon the occurrence of any of the following events:
   (i) ENGINEER fails to perform the terms of this AGREEMENT, and such failure continues for three (3) business days after delivery of written notice of the failure;
   (ii) ENGINEER becomes insolvent or unable to pay its debts as they become due, or declares bankruptcy, or makes an assignment for the benefit of creditors; or
   (iii) ENGINEER commits a default under any other contract it has entered into with Galveston County.

In the event of the ENGINEER's default, Galveston County shall have the right, without prejudice to any other right or remedy, to take any, all, or none of the following actions, at its sole discretion:

a. Terminate this AGREEMENT on written notice to ENGINEER.
b. Compel the ENGINEER to stop the work under this AGREEMENT on written notice to the ENGINEER, whereupon the ENGINEER shall withdraw from the project and assign to the COUNTY all subcontractors as the COUNTY may request, and transfer all assessments, testing, permitting, plans, and specifications developed to date as the COUNTY may direct.

Docusign Envelope ID: BA0D84D0-A9EF-4A40-8A17-B2EFF39C6775

c. Complete the work, either with or without using ENGINEER's assessments, testing, permitting, plans, and specifications.
d. Withhold payment of any further sums due to ENGINEER under this AGREEMENT, until after FINAL COMPLETION of the IMPROVEMENTS, whereupon the COUNTY shall determine the amount, if any, of damages caused by the ENGINEER's default, the amount to which ENGINEER is entitled for its performance of the work up to the date of such termination, and the amount, with due regard to the circumstances of termination, sufficient to equitably compensate the ENGINEER for the use of the ENGINEER's assessments, testing, permitting, plans and specifications. Upon such determination, COUNTY shall pay to the ENGINEER the net amount which may be due, if any, in accordance with such determination.
e. Sue ENGINEER for damages, injunctive, or equitable relief.

In addition to the remedies stated here, the COUNTY has the right to pursue other remedies permitted by law or in equity. The COUNTY's waiver of any event of default under this AGREEMENT shall not operate as a waiver of any subsequent default under the terms of this AGREEMENT.

B. **PROPERTY OWNER's Default**: PROPERTY OWNER will be in default under this AGREEMENT upon the occurrence of any of the following events:
   a. PROPERTY OWNER fails to perform the terms of this AGREEMENT, and such failure continues for three (3) business days after delivery of written notice of the failure.
   b. PROPERTY OWNER becomes insolvent or unable to pay its debts as they become due, declares bankruptcy, or makes an assignment for the benefit of creditors.
   c. PROPERTY OWNER is in default under any other contract it has entered into with Galveston County.
   d. PROPERTY OWNER has misused the proceeds of this MITIGATION OFFER.
   e. PROPERTY OWNER has made material misrepresentations in connection with this AGREEMENT. In the event of PROPERTY OWNER's default, the COUNTY shall have the right, without prejudice to any other right or remedy, to take any, all, or none of the following actions at its sole discretion:
      i. Terminate this AGREEMENT upon written notice to the PROPERTY OWNER.
      ii. Direct the ENGINEER to stop the work under this AGREEMENT, either temporarily or permanently. Notwithstanding the foregoing, sums earned or incurred by the ENGINEER through the date of termination shall be preserved subject to COUNTY review.
      iii. Withhold payment of any further sums due to the ENGINEER for any unearned portion of the activities described under this AGREEMENT.
      iv. Pursue damages, injunctive, or equitable relief as permitted by law.

C. **COUNTY's Discretionary Termination:** The COUNTY reserves the right to terminate this AGREEMENT, in whole or in part, upon written notice to the ENGINEER and PROPERTY OWNER, if continued performance is determined to be contrary to federal or state grant requirements, administratively infeasible, or inconsistent with the COUNTY's mitigation program objectives. In such an event, the COUNTY will compensate the ENGINEER for all eligible and documented services satisfactorily performed up to the effective date of termination, subject to FEMA and TDEM approval.

Docusign Envelope ID: BA0D84D0-A9EF-4A40-8A17-B2EFF39C6775

ARTICLE IX. MISCELLANEOUS PROVISIONS

A. **Relationship of the parties to this AGREEMENT**: ENGINEER is an independent contractor in all respects with regard to this AGREEMENT. Nothing contained in this AGREEMENT shall be deemed or construed to create a partnership, joint venture, agency, employment, or other relationship between and among the parties, other than that of independent entities contracting with each other solely for the purpose of carrying out the provisions of this AGREEMENT.

B. **Immunity Retained:** The parties to this AGREEMENT agree that by entering into this AGREEMENT, the COUNTY has not waived any immunity it may have at common law or otherwise. The COUNTY specifically reserves any and all defenses, including but not limited to claims of sovereign, qualified, or official immunity, against any action arising in conjunction with this AGREEMENT. The COUNTY does not waive or in any way relinquish any immunity or defense on behalf of itself, its elected officials, officers, employees, or agents as a result of its execution of this AGREEMENT and performance of the covenants contained herein.

C. **Inspection:** Representatives from the Federal Government, the State, the COUNTY, and their designees shall have the right to inspect all work performed under this AGREEMENT. ENGINEER and PROPERTY OWNER shall take all steps necessary to ensure that representatives from the Federal Government, the State, the COUNTY, or their designees are permitted to examine and inspect all documentation, assessments, testing results, permits, plans, and specifications related to this AGREEMENT. Such inspections shall not constitute acceptance of work, nor shall they impose any responsibility on the Federal Government, the State, or the COUNTY for defective work, nor shall they relieve either party of liability for breach of this AGREEMENT.

D. **Notice:** Any notice required or permitted by this AGREEMENT shall be in writing and shall be delivered to the respective party or parties as addressed in ARTICLE II: ADMINISTRATIVE CONTACTS. Any notice shall be deemed delivered—whether actually received or not—when deposited in the United States mail, postage fully paid, via certified mail, and addressed to the intended recipient at the notice address set forth on the Cover Page and in ARTICLE II: ADMINISTRATIVE CONTACTS. Notice given in any other manner shall be effective only if and when received by the intended recipient. Any change of address for notice must be communicated in writing and delivered in accordance with the CHANGE ORDER process under this AGREEMENT.

E. **Entirety of Agreement:** This AGREEMENT contains the entire agreement and understanding among the parties and supersedes and replaces any and all prior or contemporaneous proposals, agreements, promises, negotiations, understandings, commitments, and/or representations of any kind, whether written or oral, relating to the subject matter of this AGREEMENT or the services or deliverables to be provided under it.

F. **Duty to Provide Additional Information:** PROPERTY OWNER and ENGINEER shall, within three (3) business days of receipt, furnish to the COUNTY copies of all notices received that pertain to the PROPERTY, including notices from any of the following:
    a. Any governmental or private authority having jurisdiction over the PROPERTY;
    b. Any insurance company carrying a policy pertaining to the PROPERTY;
    c. Any lender holding a lien or security interest against any part of the PROPERTY; or
    d. Any person asserting a claim against the PROPERTY OWNER, ENGINEER, or the PROPERTY.

Docusign Envelope ID: BA0D84D0-A9EF-4A40-8A17-B2EFF39C6775

G. **Governing Law and Venue:** This AGREEMENT and the rights and obligations of the parties shall be governed by and construed in accordance with the laws of the State of Texas, and venue shall lie exclusively in Galveston County, Texas.

H. **Severability:** If any provision of this AGREEMENT is held to be invalid, illegal, or unenforceable in any respect, such invalidity, illegality, or unenforceability shall not affect the validity of the remaining provisions, and this AGREEMENT shall be construed as if such invalid, illegal, or unenforceable provision had never been included.

I. **Validity/Enforceability:** If any current or future legal limitations affect the validity or enforceability of a provision of this AGREEMENT, then such legal limitations shall be deemed a part of this AGREEMENT and shall operate to amend or modify the affected provision to the minimum extent necessary to bring it into conformity with applicable law. As so modified, this AGREEMENT shall remain in full force and effect.

J. **Force Majeure:** No party to this AGREEMENT shall be liable for any failure or delay in performance of its obligations under this AGREEMENT to the extent such failure or delay is caused by acts of God, acts of public enemies, fires, floods, power outages, wars, civil disturbances, epidemics, pandemics, sabotage, terrorism, accidents, insurrections, blockades, embargoes, storms, explosions, labor disputes (regardless of whether employee demands are reasonable or within the party's power to satisfy), failures of common carriers, internet service providers, or other communication systems, cyberattacks, criminal acts, acts of governmental authorities (civil or military, domestic or foreign), or the failure or delay of third parties or agencies from whom a party must obtain approvals, licenses, permits, or materials (collectively, "Force Majeure Occurrences"). Any resulting delay shall not constitute a breach of this AGREEMENT, and all affected deadlines shall be extended for a period equal to the time lost due to such delays. No party shall be liable to the other for any claims, damages, or losses resulting from a Force Majeure Occurrence.

K. **Authority:** Each party to this AGREEMENT represents and warrants that the individual executing this AGREEMENT on its behalf has full power and authority to do so, and that this AGREEMENT constitutes the legal, valid, and binding obligation of each party.

L. **Amendment:** This AGREEMENT may be amended only by a **written instrument signed by all parties** to this AGREEMENT, with each party's authorization properly documented.

M. **Survival:** The provisions of **ARTICLES I, II, IV, VI(G), VII(C), (D), IX(B), (J), X, XI** and EXHIBIT G – TDEM Specific Clauses shall survive the termination or expiration of this AGREEMENT.

ARTICLE X. DUPLICATION OF BENEFITS & LEGAL SETTLEMENTS

The PROPERTY OWNER agrees to notify the COUNTY in writing of any financial settlement, insurance claim, grant payment, or legal judgment received that relates, in whole or in part, to the HMGP-funded elevation of the subject PROPERTY. The PROPERTY OWNER acknowledges and agrees that any such funds received for the same purpose as assistance provided under this AGREEMENT may constitute a Duplication of Benefits (DOB) and may result in a reduction of current or future grant funds or a required repayment to the COUNTY.

This includes, but is not limited to, payments or reimbursements from:

- Lawsuits related to structural damages or construction defects;

Docusign Envelope ID: BA0D84D0-A9EF-4A40-8A17-B2EFF39C6775

- Insurance claims following disasters;
- ICC (Increased Cost of Compliance) proceeds;
- Private grants or other FEMA-funded programs.

This obligation to disclose is required by Section 312 of the Robert T. Stafford Disaster Relief and Emergency Assistance Act (42 U.S.C. § 5155). Failure to disclose these funds may constitute a material breach of this AGREEMENT and could result in disqualification from future FEMA assistance or legal recovery actions by the COUNTY.

PROPERTY OWNER: DO NOT SIGN THIS AGREEMENT IF YOU DO NOT FULLY UNDERSTAND THIS PROVISION.

ARTICLE XI. DISPUTE RESOLUTION

In the event of a disagreement, dispute, or claim arising from or related to this AGREEMENT, including but not limited to the performance, interpretation, application, or breach of any term herein, the following process shall govern:

A. **Notice and Initial Resolution Effort:** The PARTY asserting a dispute shall notify the other PARTY/PARTIES in writing, clearly identifying the nature of the dispute, the impacted provisions of the AGREEMENT, and the requested resolution. Upon receipt of such notice, the PARTIES shall make a good faith effort to resolve the dispute through informal discussion within ten (10) business days.
B. **COUNTY Review and Determination:** If the dispute is not resolved informally, the COUNTY shall have the authority to review the matter and issue a written determination within fifteen (15) business days. The COUNTY's decision shall be based on applicable contract terms, FEMA program rules and regulations, and any supporting documentation submitted by the PARTIES.
C. **Non-Binding Mediation (Optional):** Should either the ENGINEER or PROPERTY OWNER disagree with the COUNTY's determination, the PARTY may submit a written request to enter into non-binding mediation. Mediation shall only proceed if the COUNTY agrees to participate. Mediation shall be conducted by a mutually agreed-upon mediator with FEMA or engineering contract expertise, and the process shall occur within thirty (30) calendar days of the request. Costs associated with mediation shall be shared equally by the requesting PARTIES. Nothing in this clause shall be construed to require the COUNTY's participation in disputes solely between the ENGINEER and the PROPERTY OWNER.
D. **No Waiver of Legal Rights:** Participation in any portion of this dispute resolution process does not waive any PARTY's legal rights, including the COUNTY's right to seek immediate injunctive relief or to terminate this AGREEMENT under ARTICLE VIII. This section is intended to provide a structured resolution process while preserving all remedies available at law or in equity.
E. **Continued Performance: Unless** otherwise directed by the COUNTY, all PARTIES shall continue to fulfill their obligations under this AGREEMENT during the dispute resolution process.
F. The County reserves the right to terminate this Agreement in the event of noncompliance, homeowner withdrawal, or failure to adhere to program timelines or requirements.

PROPERTY OWNER: DO NOT SIGN THIS AGREEMENT IF YOU DO NOT FULLY UNDERSTAND THIS PROVISION.

EXHIBIT B
CONTRACT BETWEEN COUNTY AND ENGINEER

Docusign Envelope ID: BA0D84D0-A9EF-4A40-8A17-B2EFF39C6775

State of Texas	§
	§
County of Galveston	§

AGREEMENT FOR ENGINEERING SERVICES

PARTIES

This Agreement for Engineering Services (the "Agreement") is made and entered into by and between the County of Galveston, a political subdivision of the State of Texas, acting by and through its Galveston County Commissioners Court (the "County"), and Aran Franklin Engineering, Inc. (the "Engineer"), each of whom is a Party hereto and who are collectively referred to herein as the Parties. This Agreement is to perform engineering services for home elevation within the County (the "Project"), which is further described herein and which such services are within the scope of the practice of engineering.

RECITALS

The County conducted a Request for Qualifications, Number RFQ #B242004, entitled "Galveston County Home Elevation Engineering Services" (the "RFQ"), to procure professional engineers to engineer-design the elevation of single-family dwellings impacted by Hurricane Harvey through the County to mitigate against future flooding (the "Project"), which is further described herein and which such services are within the scope of the practice of engineering. The terms of the RFQ and submitter's proposal are fully incorporated herein as part of the contract as if fully stated in this document.

The Engineer timely submitted a statement of qualifications in the RFQ, is a licensed engineer in the State of Texas, and wishes to perform said services.

Now Therefore, for and in consideration of the covenants and agreements contained herein, the receipt and sufficiency of which is hereby acknowledged, the Parties agree as follows:

CONTRACTUAL UNDERTAKINGS

SECTION I RETENTION OF ENGINEER

The County, by and through this Agreement, retains the Engineer to perform professional engineering services in connection with the Project, and the Engineer, by and through this Agreement, agrees to perform said professional engineering services in connection with the Project.

SECTION II
CHARACTER AND EXTENT OF SERVICES

The Engineer shall render professional engineering services necessary for the development of the Project, limited to the following and performed in accordance with existing local, State and Federal regulations, as set out in the Scope of Services attached hereto as Exhibit "A".

Docusign Envelope ID: BA0D84D0-A9EF-4A40-8A17-B2EFF39C6775

The Scope of Services and Response attached hereto as Exhibit "A" is also made a part of this Agreement for all purposes. But, if any terms of Exhibit "A" conflicts with any existing State of Texas, Texas Department of Transportation, local, or Federal laws, rules or regulations, the State, Federal or local laws, rules or regulations shall control.

The character and extent of services outlined above shall be considered complete upon approval by the County, acting by and through its Grants Administration Manager, of the various drawings, data, and tasks outlined in Exhibit "A".

All Services provided by Engineer shall be of good quality and shall be performed in a professional manner. The standard of care for all professional engineering and related Services performed or furnished by Engineer and the Response under this Agreement will be the care and skill ordinarily used by other competent engineers practicing under the same or similar circumstances and professional license. Engineer will re-perform any Services not meeting this standard without additional compensation. Engineer will perform its services as expeditiously as is prudent considering the ordinary professional skill and care of a competent engineer.

Additional services that may be required after approval of these documents by the County, or required by State or Federal regulations published in the State or Federal Register after the date of execution of this Agreement, shall not be considered as covered by the initial price and scope of this agreement. If the foregoing occurs or for any other required changes in scope, County and Engineer will attempt to negotiate a change order first on a flat fee basis.

SECTION III PERIOD OF SERVICES

This Agreement shall be effective upon execution by the County and by the Engineer, with the date of the Party signing last in time, and shall remain in force until satisfactory completion of all services described herein or termination under the provisions hereinafter provided in section VIII.

After execution of Agreement, Engineer shall submit a Project Time Schedule to the Grants Administration Manager, which shall be diligently followed during performance of services. It is understood by the County that the Engineer will make every effort to expedite completion of the Project.

SECTION IV
COORDINATION WITH THE COUNTY

The Engineer agrees to perform the services diligently after authorization to proceed. The Engineer agrees to perform all other services diligently and within the agreed upon time schedule.

The Engineer shall hold periodic conferences with the Grants Administration Manager to the end that the Project, as perfected, shall have full benefit of the County's experience and knowledge of existing needs and facilities and be consistent with the County's current policies and construction standards.

To implement this coordination, the Grants Administration Manager shall make available to the Engineer for use in the Project, all existing plans, maps, field notes, statistics, computations, and other data in its possession relative to the Project. Engineer shall submit a monthly progress report

Docusign Envelope ID: BA0D84D0-A9EF-4A40-8A17-B2EFF39C6775

of project status to the Grants Administration Manager and the Grants Administration Manager is the County's designated point of contact for this Agreement.

SECTION V
THE ENGINEERS'S COMPENSATION

As set forth in Exhibit "A" attached hereto, the County shall compensate the Engineer for services performed under this Agreement per the compensation amounts shown in Exhibit "A" for design and construction phase services.

Notwithstanding the foregoing, the maximum amount payable under this Contract is **$500,000.00** including expenses which the Engineer exceeds at its own risk. The maximum amount payable may be revised in the event of changes in extent, complexity, or character of work requiring such revisions upon the prior mutual, written agreement by the County and the Engineer. No revisions in the maximum amount payable will be permitted unless previously authorized in writing by the County.

Payments to the Engineer for authorized services will be made by the County within 45 calendar days upon presentation of monthly statements by the Engineer to the County reflecting Engineer's performance of such services, unless disputed by the County. Additionally, the County agrees that it shall review the monthly statements and if disputing, shall notify the Engineer of the County's dispute no later than thirty (30) days after the County's receipt of the monthly statement. All remittances shall be mailed or delivered to Engineer's office. Engineer further agrees that all monthly statements shall detail its services under this Agreement and, if this Agreement is funded through Federal dollars, comply with applicable Federal requirements associated with costs.

SECTION VI
OWNERSHIP OF DOCUMENTS

Original documents, plans, designs and survey notes ("Documents") belong to and remain the property of the County, in consideration of which it is mutually agreed that the County will use them solely in connection with the Project or as required by law, save with the express consent of the Engineer. The Engineer may retain copies of such Documents.

County contracts are subject to all legal requirements provided by county, state or federal statutes, rules and regulations.

Engineer acknowledges that Galveston County is a governmental entity which conducts its meetings in accordance with the Texas Open Meetings Act and whose certain records are available to the public under the Texas Public Information Act. In accordance with Title 5, Chapters 551 and 552 of the Texas Government Code, this Agreement is an open record under the Public Information Act and as such, will be discussed and voted upon in a public meeting. Any request made to either inspect or acquire a copy of this Agreement or the Documents produced as a result of this Agreement will not violate the terms of this Agreement.

Docusign Envelope ID: BA0D84D0-A9EF-4A40-8A17-B2EFF39C6775

SECTION VII
DISPUTE RESOLUTION

If a dispute arises out of or relates to a breach of this Agreement, and if the dispute cannot be settled through negotiation, then the Engineer and the County agree to submit the dispute to mediation. In the event the Engineer or the County desires to mediate any dispute, it shall notify the other Party in writing of the dispute desired to be mediated. If the Parties are unable to resolve their differences within ten days of the receipt of such notice, such dispute shall be submitted for mediation in accordance with the procedures and rules of the American Arbitration Association (or any successor organization) then in effect. The deadline for submitting the dispute to mediation can be changed if the Parties mutually agree in writing to extend the time between receipt of notice and submission of mediation. The expenses of the mediator shall be shared 50 percent by the Engineer and 50 percent by the County. This requirement to seek mediation shall be a condition required before filing an action at law or in equity.

SECTION VIII
TERMINATION

The County may terminate the Agreement with or without cause, or for convenience by giving to the Engineer at least thirty (30) calendar days' advance notice in writing. Upon receipt or delivery of such notice, the Engineer shall discontinue all services in connection with the performance of this Agreement and shall proceed to cancel promptly all existing orders and contracts insofar as such orders or contracts are chargeable to this Agreement. As soon as practicable after receipt of notice of termination, the Engineer shall submit a statement showing in detail, the services performed under this Agreement to the date of termination.

The County shall then pay the Engineer promptly for that portion of the prescribed charges which the services actually performed under this Agreement bear to the total services called for under the Agreement, less such payments on account of the charges as have been previously made. Copies of all completed or partially completed surveys, reports, designs, plans, specifications and all other documents prepared under this Agreement shall be delivered to the County Engineer when and if this agreement is terminated, but subject to the restrictions, as to their use, as set forth in Section VI.

SECTION IX
INSURANCE

The Engineer shall obtain and maintain, throughout the term of the Agreement, insurance of the types and in the minimum amounts set forth below.

The Engineer shall, upon request by the County, furnish certificates of insurance to the County evidencing compliance with the insurance requirements herein. Certificates shall indicate name of the Engineer, name of insurance company, policy number, and terms and limits of coverage. The Engineer shall cause its insurance companies to provide the County with at least thirty (30) days' prior written notice of any reduction in the limit of liability by endorsement of the policy, cancellation or non-renewal of the insurance coverage required under this Agreement. The Engineer

Docusign Envelope ID: BA0D84D0-A9EF-4A40-8A17-B2EFF39C6775

shall obtain such insurance from such companies having a Best's rating of B+/VII or better, licensed or approved to transact business in the state in which the Services shall be performed, Texas, and shall obtain such insurance of the following types and minimum limits.

a. Workers' Compensation insurance in accordance with the Laws of the State of Texas, or state of hire/location of Services, and Employer's Liability coverage with a limit of not less than $500,000 each employee for Occupational Disease; $500,000 policy limit for Occupational Disease; and Employer's Liability of $500,000 each accident.

b. Commercial General Liability insurance including coverage for Products/Completed Operations, Blanket Contractual, Contractors' Protective Liability, Broad Form Property Damage, Personal Injury/Advertising Liability, and Bodily Injury and Property Damage with limits of not less than:

$2,000,000	general aggregate limit
$1,000,000	each occurrence, combined single limit
$1,000,000	aggregate Products, combined single limit
$1,000,000	aggregate Personal Injury/Advertising Liability
$50,000	Fire Legal Liability
$5,000	Premises Medical

c. Business Automobile Liability coverage applying to owned, non-owned and hired automobiles with limits not less than $1,000,000 each occurrence combined single limit for Bodily Injury and Property Damage combined.

d. Umbrella Excess Liability insurance written as excess of Employer's Liability, with limits not less than $1,000,000 each occurrence combined single limit.

e. Professional Liability insurance with limits not less than $1,000,000 each claim/annual aggregate.

The County and the County's agents and employees shall be added as additional insureds to all coverages required above, except for those requirements in paragraphs "a" and "e". All policies written on behalf of the Engineer shall contain a waiver of subrogation in favor of the County and the County's agents and employees, with the exception of insurance required under paragraph "e". Additionally, the Contractor's commercial general liability insurance must provide any defense provided by the policy to Galveston County, its officials, employees, and agents.

SECTION X
VENUE AND CHOICE OF LAW

This Agreement shall be construed and enforced for all purposes pursuant to the laws of the State of Texas. Venue shall lie exclusively in a court of competent jurisdiction in Galveston County, Texas.

Docusign Envelope ID: BA0D84D0-A9EF-4A40-8A17-B2EFF39C6775

SECTION XI
ADDRESS OF NOTICES AND COMMUNICATIONS

All notices and communications under this Agreement to be mailed or delivered to Engineer shall be to the following address:

Chandra Franklin Womack, P.E.
Aran & Franklin Engineering, Inc.
8419 Emmett F. Lowry
Texas City, TX 77591-2249

All notices and communications under this Agreement to be mailed or delivered to the County shall be to the following address:

Mark Henry, Galveston County Judge
Galveston County Courthouse
722 Moody, 2nd Floor
Galveston, Texas 77550

With a copy to:

Grants Administration Manager,
Professional Services
722 Moody Ave., 3rd Floor
Galveston, Texas 77550

SECTION XII
SECTION CAPTIONS

Each section under the contractual undertakings has been supplied with a caption to serve only as a guide to the contents. The caption does not control the meaning of any section or in any way determine its interpretation or application.

SECTION XIII
SUCCESSORS AND ASSIGNS

The County and the Engineer each binds itself and its successors, and assigns to the other Party of this Agreement and to the successors, and assigns of such other Party in respect to all provisions of this Agreement. Except as above, neither the County nor the Engineer shall assign, subcontract, or otherwise transfer their interest in this Agreement without the prior written consent of the other Party. Nothing herein shall be construed as creating any personal liability on the part of any officer or agent of any public body which may be a party thereto.

SECTION XIV
ADDITIONAL TERMS

Docusign Envelope ID: BA0D84D0-A9EF-4A40-8A17-B2EFF39C6775

14.1 PROCUREMENT REQUIREMENTS

Engineer shall comply with all applicable local, State, and Federal laws, rules, regulations, orders, and ordinances. This includes, but is not limited to, that Engineer shall comply with the Galveston County Purchasing Policies & Procedures Manual approved by Order of the Commissioners Court on March 7, 2018, including without limitation, applicable provisions within Chapter Nine of said Manual as this contract is made pursuant to a federal award.

14.2 CONFLICT OF INTEREST

a. No member of the County's governing body, and no employee, officer, or agent of the County shall participate in the selection or in the award of administration of a subcontract supported by grant funds if a conflict of interest, real or apparent, would be involved. Such a conflict of interest would arise when: 1.) the employee, officer, or agent, 2.) any member of his or her immediate family, 3.) his or her partner, or 4.) any organization which employs, or is about to employ any of the above; has a financial or other interest in the firm or person selected to perform the subcontract.

b. In all cases not governed by Subsection (a) of this Section, no person specified in subsection (c) of this Section, who exercises any functions or responsibilities in connection with the planning and carrying out of the project, or who are in a position to participate in decision making process or gain inside information with regard to activities under this Agreement as Amended, may obtain a financial interest or benefit from the activity, or have an interest or benefit from the activity, or have any interest in any contract, subcontract, or agreement with respect thereto, or the proceeds thereunder, either for themselves or those with whom they have family or business ties during their tenure or for (1) year thereafter.

c. The conflict of interest provisions of Subsection (b) apply to any person who is an employee, agent, consultant, officer, elected official, or appointed official of the County or of the Contractor.

14.3 AUTHORITY TO BIND

Each Party represents and warrants for itself that the individual executing this Agreement on its behalf has the full power and authority to do so and to legally bind the Party to all the terms and provisions of this Agreement and that this Agreement constitutes the legal, valid, and binding agreement of each Party hereto.

14.4 IMMUNITY RETAINED

The County does not waive or relinquish any immunity or defense on behalf of itself, its trustees, officers, employees, and agents as a result of its execution of this Agreement and performance of the covenants contained herein. The County specifically reserves any claim it may have to sovereign, qualified, or official immunity as a defense to any action arising in conjunction with this Agreement.

Docusign Envelope ID: BA0D84D0-A9EF-4A40-8A17-B2EFF39C6775

14.5 NO THIRD-PARTY BENEFICIARY

This Agreement inures only to the benefit of Galveston County and Contractor. This Agreement does not create, is not intended to create, and shall not be deemed or construed to create, any rights or benefits in third parties.

14.6 SEVERABILITY

If a provision contained in this Agreement is held invalid for any reason by a court of competent jurisdiction, the invalidity shall not affect other provisions of the Agreement that may be given effect without the invalid provision, and to this end the provisions of this Agreement are severable.

14.7 VALIDITY/ENFORCABILITY

If any current or future legal limitations affect the validity or enforceability of a provision of this Agreement, then the legal limitations are made a part of this Agreement and shall operate to amend this Agreement to the minimum extent necessary to bring this Agreement into conformity with the requirements of the limitation, and as so modified, this Agreement shall continue in full force and effect.

This Agreement is hereby EXECUTED by the Parties to be effective upon full execution with the date of the Party signing last in time.

Exhibit A

Pricing proposal for Galveston County September 20, 2024

Home elevations – Scope

Preliminary Design Inspections- photos of all 4 sides, field verify measurements of the house based on survey, measure and sketch location of all windows and doors, plate heights, roof slopes, etc.

Design Drawings – perimeter wall layouts, elevations of all 4 sides (existing and proposed), 3D Renderings in accordance with the NFIP standards in 44 CFR Part 60 and to the latest published edition of ASCE 24 or its equivalent criteria. Compare to original architectural plans, if available.

Structural Layout Plans – layout-based field Inspections and draw original structural plans. Lay out, sub pile locations, grade beams, footings, chain wall, stair & landing locations, ac decks, garage tie in, etc. Lay out flood vent plan design.

Windstorm and Structural Engineering Design – make engineering changes based on structural layouts and design drawings. Calculate vents needed for air and flood. Stamp and issue 100% plans and specifications for construction bids.

Inspections and Confirmations –

1. 30%/Milestone 2 Inspection and invoice certification (Dig and Lift)
2. 60% Completion Inspection (Piers pushed and formed Grade Beams)
3. 90%/Milestone 3 – Completion Inspection invoice certification (house fully lifted and secured)
4. 100%/Milestone 4 – Completion Inspection and invoice certification (all construction and documents complete)

Letter – vent plan letter for City of Galveston for any/all houses within the Galveston City Limits.

As-Builts- structural plans will be reissued "as-built" based on inspections and plan changes during construction provided to construction contractor for permit closeout.

One contract with individual task orders will be issued per address.

Changes to scope after design drawings are approved will incur:

- CAD charges of $90/hr.
- Design at $90/hr.
- Structural at $125/hr.

LUMP SUM PRICING DESIGN:

- 1 story houses up to 5,500 SF under roof - $4,500.00
- Large 1 story and all 2 story houses - $5,750.00
- Higher elevations (structures above 6' require additional engineering) with larger spans add - $1,600.00

LUMP SUM PRICING INSPECTIONS AND WINDSTORM CERTIFICATION:

- All home sizes $2,500.00
- Additional letters $100 each unless inspections are required
- Failed inspections - contractor will have to pay a $400.00 reinspection fee as approved by Galveston County.

Geo-Technical Report* (Soils Report- includes up to (3) 25' borings)

- $3,800.00 / Lot

Surveying Pricing*: (Note: Topo pricing to be determined on a case-by-case basis based on lot size)

- Elevation Certificate: $400.00 each (need preliminary, mid lift and final)
- Topographical Survey: $+/- $850.00 - +/- $1,600.00
- Final Survey: $500.00 (showing elevated home and all access structures- as needed)

Use of existing elevation certificates and topographical surveys will be assessed on a case by case basis and pricing reduced accordingly if found to be acceptable for use on the project.

Ground Penetrating Radar* (slab scans- price varies based on home size)

- $2000.00 - $2750.00

RFQ (help design RFQ):

Assist in providing guidance for qualification of contractor pool.
Includes half day consultation on contractor qualification criteria and performance expectations and final review of RFQ specifications prior to issuance. $3500 (one time fee)

* Typical turnaround times for receipt of outsourced services are 3-4 weeks and weather dependent. We cannot finalize our plans without this information so this will affect the overall deliverable timeframes.

POWER OR ATORNEY
OR
LETTERS OF APPOINTMENT AS GUARDIAN OF ESTATE

(If Applicable)

Docusign Envelope ID: BA0D84D0-A9EF-4A40-8A17-B2EFF39C6775

STATUTORY DURABLE POWER OF ATTORNEY

NOTICE: THE POWERS GRANTED BY THIS DOCUMENT ARE BROAD AND SWEEPING. THEY ARE EXPLAINED IN THE DURABLE POWER OF ATTORNEY ACT, SUBTITLE P, TITLE 2, ESTATES CODE. IF YOU HAVE ANY QUESTIONS ABOUT THESE POWERS, OBTAIN COMPETENT LEGAL ADVICE. THIS DOCUMENT DOES NOT AUTHORIZE ANYONE TO MAKE MEDICAL AND OTHER HEALTH-CARE DECISIONS FOR YOU. YOU MAY REVOKE THIS POWER OF ATTORNEY IF YOU LATER WISH TO DO SO. IF YOU WANT YOUR AGENT TO HAVE THE AUTHORITY TO SIGN HOME EQUITY LOAN DOCUMENTS ON YOUR BEHALF, THIS POWER OF ATTORNEY MUST BE SIGNED BY YOU AT THE OFFICE OF THE LENDER, AN ATTORNEY AT LAW, OR A TITLE COMPANY.

You should select someone you trust to serve as your agent (attorney in fact). Unless you specify otherwise, generally the agent's (attorney in fact's) authority will continue until:

(1) you die or revoke the power of attorney;
(2) your agent (attorney in fact) resigns or is unable to act for you; or
(3) a guardian is appointed for your estate.

I, **DEAN RAY CHILES, 30 Lakeside Drive, Hitchcock, Texas 77563,** appoint ALYSA MARIE CHILES, 30 Lakeside Drive, Hitchcock, Texas 77563, as my agent (attorney in fact) to act for me in any lawful way with respect to all of the following powers that I have initialed below. I do hereby revoke any and all former Statutory Durable Power of Attorney documents that may have been made by me at any time before the date of this Statutory Durable Power of Attorney.

YOU MAY APPOINT CO-AGENTS. UNLESS YOU PROVIDE OTHERWISE, CO-AGENTS MAY ACT INDEPENDENTLY.

TO GRANT ALL OF THE FOLLOWING POWERS, INITIAL THE LINE IN FRONT OF (N) AND IGNORE THE LINES IN FRONT OF THE OTHER POWERS LISTED IN (A) THROUGH (M).

TO GRANT A POWER, YOU MUST INITIAL THE LINE IN FRONT OF THE POWER YOU ARE GRANTING.

TO WITHHOLD A POWER, DO NOT INITIAL THE LINE IN FRONT OF THE POWER. YOU MAY, BUT DO NOT NEED TO, CROSS OUT EACH POWER WITHHELD.

(A) _____ Real property transactions;

(B) _____ Tangible personal property transactions;

(C) _____ Stock and bond transactions;

(D) _____ Commodity and option transactions;

Docusign Envelope ID: BA0D84D0-A9EF-4A40-8A17-B2EFF39C6775

(E) _____ Banking and other financial institution transactions;

(F) _____ Business operating transactions;

(G) _____ Insurance and annuity transactions;

(H) _____ Estate, trust, and other beneficiary transactions;

(I) _____ Claims and litigation;

(J) _____ Personal and family maintenance;

(K) _____ Benefits from social security, Medicare, Medicaid, or other governmental programs or civil or military service;

(L) _____ Retirement plan transactions;

(M) _____ Tax matters;

(N) DC ALL THE POWERS LISTED IN (A) THROUGH (M). YOU DO NOT HAVE TO INITIAL THE LINE IN FRONT OF ANY OTHER POWER IF YOU INITIAL LINE (N).

Special Instructions

Special instructions applicable to **agent compensation** (initial in front of one of the following sentences to have it apply; if no selection is made, each agent will be entitled to compensation that is reasonable under the circumstances):

_____ My agent is entitled to reimbursement of reasonable expenses incurred on my behalf and to compensation that is reasonable under the circumstances.

DC My agent is entitled to reimbursement of reasonable expenses incurred on my behalf but shall receive no compensation for serving as my agent.

Special instructions applicable to **co-agents** (if you have appointed co-agents to act, initial in front of one of the following sentences to have it apply; if no selection is made, each agent will be entitled to act independently):

_____ Each of my co-agents may act independently for me.

_____ My co-agents may act for me only if the co-agents act jointly.

_____ My co-agents may act for me only if a majority of the co-agents act jointly.

ON THE FOLLOWING LINES YOU MAY GIVE SPECIAL INSTRUCTIONS LIMITING

Docusign Envelope ID: BA0D84D0-A9EF-4A40-8A17-B2EFF39C6775

OR EXTENDING THE POWERS GRANTED TO YOUR AGENT :

NONE

UNLESS YOU DIRECT OTHERWISE BELOW, THIS POWER OF ATTORNEY IS EFFECTIVE IMMEDIATELY AND WILL CONTINUE UNTIL IT TERMINATES.

CHOOSE ONE OF THE FOLLOWING ALTERNATIVES BY CROSSING OUT THE ALTERNATIVE NOT CHOSEN:

DC ~~(A) This power of attorney is not affected by my subsequent disability or incapacity.~~

(B) This power of attorney becomes effective upon my disability or incapacity.

YOU SHOULD CHOOSE ALTERNATIVE (A) IF THIS POWER OF ATTORNEY IS TO BECOME EFFECTIVE ON THE DATE IT IS EXECUTED.

IF NEITHER (A) NOR (B) IS CROSSED OUT, IT WILL BE ASSUMED THAT YOU CHOSE ALTERNATIVE (A).

If Alternative (B) is chosen and a definition of my disability or incapacity is not contained in this power of attorney, I shall be considered disabled or incapacitated for purposes of this durable power of attorney if a physician certifies in writing at a date later than the date this durable power of attorney is executed that, based on the physician's medical examination of me, I am mentally incapable of managing my financial affairs. I authorize the physician who examines me for this purpose to disclose my physical or mental condition to another person for purposes of this durable power of attorney. A third party who accepts this power of attorney is fully protected from any action taken under this durable power of attorney that is based on the determination made by a physician of my disability or incapacity.

Granting of Specific Authority

My agent MAY NOT do any of the following specific acts for me UNLESS I have INITIALED the specific authority listed below:

(CAUTION: Granting any of the following will give your agent the authority to take actions that could significantly reduce your property or change how your property is distributed at your death. INITIAL ONLY the specific authority you WANT to give your agent. If you DO NOT want to grant your agent one or more of the following powers, you may also CROSS OUT a power you DO NOT want to grant.)

Docusign Envelope ID: BA0D84D0-A9EF-4A40-8A17-B2EFF39C6775

DC

_____ Create, amend, revoke or terminate an inter vivos trust.

_____ The power to apply my property to make gifts outright to or for the benefit of a person, including by the exercise of a presently exercisable general power of appointment held by me, except that the amount of a gift to an individual may not exceed the amount of annual exclusions allowed from the federal gift tax for the calendar year of the gift. This power is subject to the limitations of Section 751.032 of the Durable Power of Attorney Act (Section 751.032, Estates Code) and any special instructions in this power of attorney.

_____ Create or change rights of survivorship.

_____ Create or change a beneficiary designation.

_____ Authorize another person to exercise the authority granted under this power of attorney.

Termination of this Statutory Durable Power of Attorney

I agree that any third party who receives a copy of this document may act under it. Termination of this statutory durable power of attorney is not effective as to a third party until the third party has actual knowledge of the termination. I agree to indemnify the third party for any claims that arise against the third party because of reliance on this power of attorney.

If any agent named by me dies, becomes incapacitated, resigns, or refuses to act, or if my marriage to an agent named by me is dissolved by a court decree of divorce or annulment or is declared void by a court (unless I provided in this document that the dissolution or declaration does not terminate the agent's authority to act under this power of attorney), I name the following (each to act alone and successively, in the order named) as successor(s) to that agent: First Successor: ANNLYN SOPHIA GUNN. Second Successor: NONE.

Signed this 18 day of Sept., 2025.

FEDERAL EMERGENCY MANAGEMENT AGENCY
NATIONAL FLOOD INSURANCE PROGRAM

ELEVATION CERTIFICATE

O.M.B. No. 3067-0077
Expires July 31, 2002

Important: Read the instructions on pages 1 - 7.

SECTION A - PROPERTY OWNER INFORMATION

BUILDING OWNER'S NAME	For Insurance Company Use:
	Policy Number
BUILDING STREET ADDRESS (Including Apt., Unit, Suite, and/or Bldg. No.) OR P.O. ROUTE AND BOX NO.	Company NAIC Number
CITY STATE ZIP CODE	

PROPERTY DESCRIPTION (Lot and Block Numbers, Tax Parcel Number, Legal Description, etc.)

BUILDING USE (e.g., Residential, Non-residential, Addition, Accessory, etc. Use a Comments area, if necessary.)

LATITUDE/LONGITUDE (OPTIONAL) (##° - ##' - ##.##" or ##.#####°) HORIZONTAL DATUM: |__| NAD 1927 |__| NAD 1983 SOURCE: |__| GPS (Type):_____ |__| USGS Quad Map |__| Other:_____

SECTION B - FLOOD INSURANCE RATE MAP (FIRM) INFORMATION

B1. NFIP COMMUNITY NAME & COMMUNITY NUMBER	B2. COUNTY NAME	B3. STATE

B4. MAP AND PANEL NUMBER	B5. SUFFIX	B6. FIRM INDEX DATE	B7. FIRM PANEL EFFECTIVE/REVISED DATE	B8. FLOOD ZONE(S)	B9. BASE FLOOD ELEVATION(S) (Zone AO, use depth of flooding)

B10. Indicate the source of the Base Flood Elevation (BFE) data or base flood depth entered in B9.
|__| FIS Profile |__| FIRM |__| Community Determined |__| Other (Describe): _____

B11. Indicate the elevation datum used for the BFE in B9: |__| NGVD 1929 |__| NAVD 1988 |__| Other (Describe): _____

B12. Is the building located in a Coastal Barrier Resources System (CBRS) area or Otherwise Protected Area (OPA)? |__| Yes |__| No
Designation Date:_____

SECTION C - BUILDING ELEVATION INFORMATION (SURVEY REQUIRED)

C1. Building elevations are based on: |__|Construction Drawings* |__|Building Under Construction* |__|Finished Construction
*A new Elevation Certificate will be required when construction of the building is complete.

C2. Building Diagram Number _____ (Select the building diagram most similar to the building for which this certificate is being completed - see pages 6 and 7. If no diagram accurately represents the building, provide a sketch or photograph.)

C3. Elevations – Zones A1-A30, AE, AH, A (with BFE), VE, V1-V30, V (with BFE), AR, AR/A, AR/AE, AR/A1-A30, AR/AH, AR/AO
Complete Items C3.a-i below according to the building diagram specified in Item C2. State the datum used. If the datum is different from the datum used for the BFE in Section B, convert the datum to that used for the BFE. Show field measurements and datum conversion calculation. Use the space provided or the Comments area of Section D or Section G, as appropriate, to document the datum conversion.
Datum _____ Conversion/Comments _____
Elevation reference mark used_____ Does the elevation reference mark used appear on the FIRM? |__| Yes |__| No

- ❑ a) Top of bottom floor (including basement or enclosure) _____ . ___ ft.(m)
- ❑ b) Top of next higher floor _____ . ___ ft.(m)
- ❑ c) Bottom of lowest horizontal structural member (V zones only) _____ . ___ ft.(m)
- ❑ d) Attached garage (top of slab) _____ . ___ ft.(m)
- ❑ e) Lowest elevation of machinery and/or equipment servicing the building (Describe in a Comments area.) _____ . ___ ft.(m)
- ❑ f) Lowest adjacent (finished) grade (LAG) _____ . ___ ft.(m)
- ❑ g) Highest adjacent (finished) grade (HAG) _____ . ___ ft.(m)
- ❑ h) No. of permanent openings (flood vents) within 1 ft. above adjacent grade _____
- ❑ i) Total area of all permanent openings (flood vents) in C3.h _____ sq. in. (sq. cm)

License Number, Embossed Seal, Signature, and Date

SECTION D - SURVEYOR, ENGINEER, OR ARCHITECT CERTIFICATION

This certification is to be signed and sealed by a land surveyor, engineer, or architect authorized by law to certify elevation information.
I certify that the information in Sections A, B, and C on this certificate represents my best efforts to interpret the data available.
I understand that any false statement may be punishable by fine or imprisonment under 18 U.S. Code, Section 1001.

CERTIFIER'S NAME LICENSE NUMBER

TITLE COMPANY NAME

ADDRESS CITY STATE ZIP CODE

SIGNATURE DATE TELEPHONE

IMPORTANT: In these spaces, copy the corresponding information from Section A.			For Insurance Company Use:
BUILDING STREET ADDRESS (Including Apt., Unit, Suite, and/or Bldg. No.) OR P.O. ROUTE AND BOX NO.			Policy Number
CITY	STATE	ZIP CODE	Company NAIC Number

SECTION D - SURVEYOR, ENGINEER, OR ARCHITECT CERTIFICATION (CONTINUED)

Copy both sides of this Elevation Certificate for (1) community official, (2) insurance agent/company, and (3) building owner.

COMMENTS

SECTION E - BUILDING ELEVATION INFORMATION (SURVEY NOT REQUIRED) FOR ZONE AO AND ZONE A (WITHOUT BFE)

For Zone AO and Zone A (without BFE), complete Items E1. through E4. If the Elevation Certificate is intended for use as supporting information for a LOMA or LOMR-F, Section C must be completed.

E1. Building Diagram Number _____ (Select the building diagram most similar to the building for which this certificate is being completed – see pages 6 and 7. If no diagram accurately represents the building, provide a sketch or photograph.)

E2. The top of the bottom floor (including basement or enclosure) of the building is |__|__| ft.(m) |__|__|in.(cm) |__| above or |__| below (check one) the highest adjacent grade. (Use natural grade, if available.)

E3. For Building Diagrams 6-8 with openings (see page 7), the next higher floor or elevated floor (elevation b) of the building is |__|__| ft.(m) |__|__|in.(cm) above the highest adjacent grade. Complete Items C3.h and C3.i on front of form.

E4. For Zone AO only: If no flood depth number is available, is the top of the bottom floor elevated in accordance with the community's floodplain management ordinance? |__| Yes |__| No |__| Unknown. The local official must certify this information in Section G.

SECTION F - PROPERTY OWNER (OR OWNER'S REPRESENTATIVE) CERTIFICATION

The property owner or owner's authorized representative who completes Sections A, B, C (Items C3.h and C3.i only), and E for Zone A (without a FEMA-issued or community-issued BFE) or Zone AO must sign here. *The statements in Sections A, B, C, and E are correct to the best of my knowledge.*

PROPERTY OWNER'S OR OWNER'S AUTHORIZED REPRESENTATIVE'S NAME

SECTION G - COMMUNITY INFORMATION (OPTIONAL)

The local official who is authorized by law or ordinance to administer the community's floodplain management ordinance can complete Sections A, B, C (or E), and G of this Elevation Certificate. Complete the applicable item(s) and sign below.

G1. |__| The information in Section C was taken from other documentation that has been signed and embossed by a licensed surveyor, engineer, or architect who is authorized by state or local law to certify elevation information. (Indicate the source and date of the elevation data in the Comments area below.)

G2. |__| A community official completed Section E for a building located in Zone A (without a FEMA-issued or community-issued BFE) or Zone AO.

G3. |__| The following information (Items G4-G9) is provided for community floodplain management purposes.

G4. PERMIT NUMBER	G5. DATE PERMIT ISSUED	G6. DATE CERTIFICATE OF COMPLIANCE/OCCUPANCY ISSUED

G7. This permit has been issued for: |__| New Construction |__| Substantial Improvement

G8. Elevation of as-built lowest floor (including basement) of the building is: _____ . ___ ft.(m) Datum: _____

G9. BFE or (in Zone AO) depth of flooding at the building site is: _____ . ___ ft.(m) Datum: _____

EXAMPLE MITIGATION OFFER/DECLINATION NOTICE

Docusign Envelope ID: BA0D84D0-A9EF-4A40-8A17-B2EFF39C6775

Texas Division of Emergency Management (TDEM)
Hazard Mitigation Grant Program (HMGP)
Final MITIGATION OFFER

S A M P L E

State Grantee: Texas Division of Emergency Management

Subgrantee: Galveston County, Texas

PROPERTY OWNER(s);
>>>>>

>>>>>

>>>>>

>>>>>

PROPERTY: >>>>>

NFIP Policy Number: >>>>> Repetitive Loss Number: >>>>>

This form documents the formal MITIGATION OFFER for the HMGP Program.

1. A mitigation grant has been awarded to Galveston County under the Hazard Mitigation Grant Program (HMGP) from the Texas Division of Emergency Management (TDEM) for the elevation of properties within the Galveston County limits.

2. The HMGP grant program is a voluntary program.

3. All information related to you and/or your individual property that is collected during the consultation and offer processes shall be protected at a level consistent with the Federal Privacy Act and similar State and local laws and ordinances.

4. The estimated amounts for elevation of the PROPERTY in the grant application are now finalized in this MITIGATION OFFER.

The MITIGATION Offer is provided to you for the elevation of the above-referenced PROPERTY.

MITIGATION OFFER	**$ >>>>>**

Docusign Envelope ID: BA0D84D0-A9EF-4A40-8A17-B2EFF39C6775

Your final MITIGATION OFFER amount is based on the following amounts:

Eligible Engineering Costs	$ >>>>>
Eligible Elevation Construction Costs	$ >>>>>
Subtotal	$ >>>>>
Deductions (ICC, Flood Insurance, SB7, other Duplicated Benefits)	$ >>>>>
MITIGATION OFFER	$ >>>>>
REQUIRED MATCH FROM PROPERTY OWNER	$ >>>>>
GRANT FUNDED AMOUNT	$ >>>>>

Any ineligible cost featured in an extra work agreement with the ENGINEER or ELEVATION CONSTRUCTION CONTRACTOR must be pre-approved in writing by the COUNTY and will be considered to be a cost to be borne solely by the PROPERTY OWNER under a separate contract and are not part of this MITIGATION OFFER.

TEMPORARY LIVING EXPENSES that exceed the daily maximum allowable cost or the total maximum costs will also be considered a cost to be borne solely by the PROPERTY OWNER.

The PROPERTY OWNER is accountable for maintenance and insurance requirements for the PORPERTY during and after the mitigation project implementation (i.e., maintaining NFIP insurance on the PROPERTY for the life of the Property).

The PROPERTY OWNERs additional responsibilities may include securing a contractor, receiving funds in a back account for the TEMPORARY LIVING EXPENSES, keeping receipts for the project in accordance with grant and AGREEMENT requirements, and other programmatic requirements as specified by the COUNTY.

Date: _____

Statement of Non-Participation

I/We, the undersigned, acknowledge that we were offered the opportunity to participate in the FEMA Hazard Mitigation Grant Program (HMGP) for the elevation of our home located at _____. After receiving information regarding the program's requirements, cope, and potential benefits, I/we have decided **not to move forward** with the elevation project at this time.

I/We understand that:

- By declining participation, no further HMGP elevation work will be performed at the property.
- This decision is **voluntary** and made without coercion or pressure from the County, its representatives, or GrantWorks, Inc.
- I/We may not be eligible for re-enrollment under this funding cycle, and future program participation (if any) will be subject to FEMA and County policy and funding availability.

Reason for Withdrawal (Optional):

- ◯ Financial concerns
- ◯ Personal/family circumstances
- ◯ Structural or site concerns
- ◯ Timeline/delays
- ◯ Other: _____

EXHIBIT G
GRANT/TDEM-SPECIFIC CLAUSES

1. **Federal and State Funding Disclaimer:** This project is funded by the FEMA Hazard Mitigation Grant Program (HMGP), administered by the Texas Division of Emergency Management (TDEM), and is contingent on continued eligibility under the terms and conditions of DR-4332.

2. **Non-Duplication of Benefits (DOB) Clause:** The Homeowner certifies that they have not and will not receive funding from any other source (e.g., ICC, SBA, insurance, legal settlement) for the same purpose. Any funds received that duplicate FEMA assistance must be reported and may be subject to recapture.

3. **FEMA Model Deed Restriction Acknowledgment** (Attachment): The Homeowner acknowledges receipt of and agrees to execute the required Acknowledgment of Conditions for Mitigation, including the requirement to maintain flood insurance in perpetuity.

4. **Flood Insurance Requirement (NFIP)**: The Homeowner agrees to maintain flood insurance on the property in accordance with 44 CFR § 206.252 and the NFIP, for the life of the property, regardless of transfer of ownership

5. **Construction & Reimbursement Contingency Clause:** All work must be within the approved scope of work as authorized by FEMA and TDEM. Any unauthorized work may result in non-reimbursement and possible removal from the program.

6. **Procurement & Conflict of Interest Compliance:** The parties acknowledge that the Contractor/Engineer was procured in accordance with 2 CFR §§ 200.318–200.326 and applicable state procurement laws. The Contractor affirms that no conflict of interest exists.

7. **Compliance with 2 CFR 200 and HMA Guidance:** The parties agree to comply with all applicable provisions of 2 CFR Part 200, FEMA Hazard Mitigation Assistance (HMA) Program Guidance, and TDEM's implementation requirements for HMGP DR-4332.

Re: Project review under Section 106 of the National Historic Preservation Act of 1966, Review of Elevation/Reconstruction of 50 Residences, Hazard Mitigation Grant Program, Galveston County, Texas (FEMA)

Dear Mr. Gentile,

Thank you for your correspondence, submitted via eTRAC on June 29, 2018, regarding the above-referenced projects. This letter serves as comment on the proposed undertakings from the State Historic Preservation Officer (SHPO), the Executive Director of the Texas Historical Commission.

The review staff, led by Kelly Little, has completed its review of the material submitted. It is our understanding that Galveston County proposes to elevate or reconstruct 200 residences through the county; at present, 50 properties have been submitted for SHPO review. SHPO was provided with photographs of each of the 50 buildings, a spreadsheet with addresses and construction dates, and a map.

Based on the information submitted and application of federal criteria for historical designation, staff has determined that the following buildings are **not eligible** for listing in the National Register of Historic Places. Undertakings at these properties will have **no effect on historic resources** and no further consultation is necessary with our agency under Section 106 of the National Historic Preservation Act:

1 Highland Drive, Hitchcock , TX 77563
10402 Jay Road, Hitchcock , TX 77563
1209 Esther Street, Kemah, TX 77565
1209 Shady Oak Lane, Dickinson, TX 77539
1211 Esther Street, Kemah, TX 77565
1212 Esther Street, Kemah, TX 77565
1215 Esther Street, Kemah, TX 77565
1216 Esther Street, Kemah, TX 77565
1317 Sunset Drive, Dickinson, TX 77539
16 Perthuis Farms Road, La Marque, TX 77568
202 Merry Way, Alvin, TX 77511
209 Old Bayou Drive, Dickinson, TX 77539
2101 Wimcrest Street, Galveston, TX 77551
2118 Cove Park Drive, League City, TX 77573
2124 59th Street, Galveston, TX 77551
2127 E Winn Street, League City, TX 77565
214 12th Street, San Leon, TX 77539
2150 Cove Park Drive, Kemah, TX 77565
2154 Cove Park Drive, League City, TX 77573
21914 Matagorda Drive, Galveston, TX 77554

Docusign Envelope ID: BA0D84D0-A9EF-4A40-8A17-B2EFF39C6775

23 Edgewater Drive, Hitchcock , TX 77563
2429 Avenue D , San Leon, TX 77539
2809 Avenue H , Dickinson, TX 77539
2817 Belmont Street, Dickinson, TX 77539
2819 Frostwood Circle, Dickinson, TX 77539
2922 Colonial Drive, Dickinson, TX 77539
2924 Colonial Drive, Dickinson, TX 77539
30 Lakeside Drive, Hitchcock , TX 77563
3122 Avenue H , Dickinson, TX 77539
3318 Maple Drive, Dickinson, TX 77539
3526 Elm Drive, Dickinson, TX 77539
3722 Bayou Circle, Dickinson, TX 77539
3919 Liggio Street, Dickinson, TX 77539
3951 Wagon Road, Dickinson, TX 77539
4210 Country Club Drive, Dickinson, TX 77539
4302 Edward Street, Texas City, TX 77591
4402 Edward Street, Texas City, TX 77591
4517 Bayou Bend, Drive, Dickinson, TX 77539
4524 Bayou Bend Drive, Dickinson, TX 77539
4607 East 28th Street, Dickinson, TX 77539
4927 Alamo Drive, Galveston, TX 77551
506 E. Shore Drive, Clear Lake Shores, TX 77565
518 Lakeside Drive, League City, TX 77565
618 Bel Road, Kemah, TX 77565
6810 Wayside Drive, Hitchcock , TX 77563
717 Narcissus Road, Clear Lake Shores, TX 77565
7621 2nd Street, Hitchcock , TX 77563
8001 Meadowbrook Drive, Hitchcock , TX 77563
920 4th Street, League City, TX 77573

4409 Avenue K is located within an area that is **eligible** for listing in the National Register of Historic Places as a historic district. Despite the noted construction date of 1975, this house appears to be of older construction and would be a contributing resource to the district. SHPO will need additional information to determine the effect of the undertaking on the historic building; please provide more specific information on what will take place at this property so that we may complete our review. Demolition would be considered an adverse effect and would require further consultation to resolve. Elevation would likely be found to have no adverse effect provided it is accomplished in a way that does not damage the integrity of the historic house.

Thank you for your participation in this federal review process, and for your efforts to preserve the irreplaceable heritage of Texas. If you have any questions concerning this review or if we can be of further assistance, please contact Kelly Little at kelly.little@thc.texas.gov or 202-717-7419.

Sincerely,

Kelly Little, Historian
For: Mark Wolfe, State Historic Preservation Officer

PROOF OF MEDICAL NEED

Docusign Envelope ID: BA0D84D0-A9EF-4A40-8A17-B2EFF39C6775

Mobility Accommodation Documentation
Galveston County Hazard Mitigation Grant Program

Dear Homeowner,

As part of the Hazard Mitigation Grant Program (HMGP), your home will be elevated above base flood elevation to reduce flood risk. When a home is elevated, access is normally provided through stairs and landings, which are standard program costs covered under the FEMA grant.

However, if a homeowner, or another permanent resident of the homes, has a **permanent medical condition** that prevents or severely limits their ability to safely use stairs, the program may allow for a **ramp** or, in specific cases, a **mechanical lift** to be installed as a reasonable accommodation under the Americans with Disabilities Act (ADA).

To document this need, the County requires the attached **Mobility Need Verification Form** to be completed by your licensed physician. This form verifies that a **permanent medical condition** exists and that a ramp or lift is medically necessary for safe access into your elevated home.

Why is this necessary?

- FEMA and the County must have medical documentation on file to approve the additional cost of a ramp or possible lift.
- The physician's verification protects both the homeowner and the County by ensuring compliance with ADA requirements.
- Without proper documentation, FEMA will not reimburse the County for ramp or lift *installation.*

What you need to do:

1. Take the attached form to your licensed physician.
2. Ask your physician to complete and sign the certification.

Docusign Envelope ID: BA0D84D0-A9EF-4A40-8A17-B2EFF39C6775

3. Return the completed form to the County as soon as possible (instructions for return will be provided).

If you have questions about the form or the process, please contact the County or GrantWorks staff. We are here to help guide you through the steps and ensure your home is completed safely and in compliance with all program requirements.

Thank you for your cooperation and for participating in the Elevation Program.

Physician Certification of Mobility Limitation

Instructions for Physician: Please complete the section below to confirm whether your patient has a **permanent medical condition** that prevents or severely limits the ability to safely climb stairs into their elevated residence.

- Patient Name: Dean R. Chiles
- Does the Patient have a **permanent** mobility limitation?
  ☑ Yes ☐ No
- Does this condition create a **substantial mobility limitation** with respect to climbing stairs into their elevated home?
  ☑ Yes ☐ No
- If Yes, in your professional medical judgment, is a **ramp or mechanical lift** medically required to provide safe access into the home?
  ☑ Yes ☐ No
- In your professional medical judgment, is a **ramp suitable** to provide safe access into the home?
  ☐ Yes ☑ No
- If *No*, in your professional medical judgment is a **mechanical lift** medically required to provide safe access into the home?
  ☑ Yes ☐ No

Legal Description - ABST 7C Bundick SUR Lot 30 Bayou Vista ADDN 2

As a recipient of Federally-funded hazard mitigation assistance under the Hazard Mitigation Grant Program, as authorized by 42 U.S.C. §5170c / Pre-Disaster Mitigation Program, as authorized by 42 U.S.C. §5133 / Flood Mitigation Assistance Program, as authorized by 42 U.S.C. §4104c / Severe Repetitive Loss, as authorized by 42 U.S.C. §4102a, the Property Owner accepts the following conditions:

1. That the Property Owner has insured all structures that will **not** be demolished or relocated out of the SFHA for the above-mentioned property to an amount at least equal to the project cost or to the maximum limit of coverage made available with respect to the particular property, whichever is less, through the National Flood Insurance Program (NFIP), as authorized by 42 U.S.C. §4001 *et seq.*, as long as the Property Owner holds title to the property as required by 42 U.S.C. §4012a.

2. That the Property Owner will maintain all structures on the above-mentioned property in accordance with the flood plain management criteria set forth in Title 44 of the Code of Federal Regulations (CFR) Part 60.3 and City/County Ordinance as long as the Property Owner holds title to the property. These criteria include, but are not limited to, the following measures:

    i. Enclosed areas below the Base Flood Elevation will only be used for parking of vehicles, limited storage, or access to the building;
    ii. All interior walls and floors below the Base Flood Elevation will be unfinished or constructed of flood resistant materials;
    iii. No mechanical, electrical, or plumbing devices will be installed below the Base Flood Elevation; and
    iv. All enclosed areas below Base Flood Elevation must be equipped with vents permitting the automatic entry and exit of flood water.

    For a complete, detailed list of these criteria, see City/County Ordinance attached to this document.

3. The above conditions are binding for the life of the property. To provide notice to subsequent purchasers of these conditions, the Property Owner agrees that the City/County will legally record with the county or appropriate jurisdiction's land

Docusign Envelope ID: BA0D84D0-A9EF-4A40-8A17-B2EFF39C6775

records a notice that includes the name of the current property owner (including book/page reference to record of current title, if readily available), a legal description of the property, and the following notice of flood insurance requirements:

> "This property has received Federal hazard mitigation assistance. Federal law requires that flood insurance coverage on this property must be maintained during the life of the property regardless of transfer of ownership of such property. Pursuant to 42 U.S.C. §5154a, failure to maintain flood insurance on this property may prohibit the owner from receiving Federal disaster assistance with respect to this property in the event of a flood disaster. The Property Owner is also required to maintain this property in accordance with the flood plain management criteria of Title 44 of the Code of Federal Regulations Part 60.3 and City/County Ordinance."

4. Failure to abide by the above conditions may prohibit the Property Owner and/or any subsequent purchasers from receiving Federal disaster assistance with respect to this property in the event of any future flood disasters. If the above conditions are not met, FEMA may recoup the amount of the grant award with respect to the subject property, and the Property Owner may be liable to repay such amounts.

This Agreement shall be binding upon the respective parties' heirs, successors, personal representatives, and assignees.

TRI-PARTY ELEVATION ENGINEERING AGREEMENT

Texas Division of Emergency Management
Hazard Mitigation Grant Program (HMGP)
Awarding Federal Agency: Federal Emergency Management Agency
Contract Number: DR-4332-0025 & 0239

INTRODUCTION OF CONTRACT PARTIES

This Tri-Party Elevation Engineering Agreement (further known as AGREEMENT) is made by, between, and among the **County of Galveston, Texas** (further known as COUNTY),

Gregory Wilson (further known as PROPERTY OWNER) and **Aran & Franklin Engineering, Inc.** (further known as ENGINEER), each of whom is a PARTY to this agreement and who are collectively further known as the PARTIES, and this agreement is effective upon the full execution of this AGREEMENT with the date of the last PARTY's signature.

This AGREEMENT pertains solely to engineering services under the HMGP program and does not include construction services.

PROPERTY OWNER

All persons and/or entities listed on the official real property Title/Deed filed at the Galveston County Clerk's Office must sign and acknowledge receipt of this agreement and any associated communications.

All owners listed on the deed must be verified through official property records prior to execution. Title/Deed for the PROPERTY lists the following as the official address for the property:
LOTS 1076, 1077, 1083, 1084, AND THE EAST 1/2 OF LOT 1075, AND THE SOUTH 1/2 OF LOT 1085, OF CLEAR LAKE SHORES, A SUBDIVISION OUT OF M. MULDOON 2 LEAGUE GRANT, IN GALVESTON COUNTY, TEXAS, ACCORDING SAID SUBDIVISION OF RECORD IN VOLUME 254, PAGE 92 IN THE OFFICE OF THE COUNTY CLERK OF GALVESTON COUNTY, TEXAS.
Parcel ID Number: 262000001076001

Title/Deed for the PROPERTY lists the following person(s)/entity(s) name(s):

Gregory Wilson

In exchange for the mutual promises contained in this agreement, and other good and valuable considerations, the receipt and sufficiency of which are hereby acknowledged and confessed, the PARTIES agree to the following:

ARTICLE I. DESCRIPTION OF PROFESSIONAL SERVICES

ENGINEER shall perform professional services associated with testing and engineering design for the structure located at **1212 Esther St., Kemah, TX 77565**, as described in EXHIBIT A – ENGINEER'S COST ESTIMATE.

The NOTICE TO PROCEED shall be issued after a Purchase Order for this property has been issued by the COUNTY's Purchasing Agent.
The services shall be provided subject to the terms and conditions of this AGREEMENT and the contract between the COUNTY and the ENGINEER attached as EXHIBIT B.

ARTICLE II. ADMINISTRATIVE CONTACTS

The following persons are designated by each respective PARTY to serve as the PARTY's contact for purposes of administering this AGREEMENT:

GALVESTON COUNTY:

Elizabeth (Betsy) Thomas
722 Moody, 3rd Floor
Galveston, Texas 77550
409-770-5355
Elizabeth.thomas@co.galveston.tx.us

Aran & Franklin Engineering, Inc.

Chandra Franklin Womack, PE
8419 Emmett F Lowry Expressway
Texas City, TX 77591
409-935-5200
chandra@aranfranklin.com

COUNTY AGENT:

Faisel Nofal
722 Moody, 3rd Floor
Galveston, Texas 77550
409-770-2497
Faisel.nofal@galvestoncountytx.gov

COUNTY AGENT:

Rebecca Whitlock, GrantWorks
2201 Northland Drive
Austin, Texas 78756
346-471-5828
rebecca.whitlock@grantworks.net

PROPERTY OWNER ADMINISTRATIVE CONTACT(S)*:

Name(s): Gregory Wilson and Deborah A. Wilson
Address: 1212 Esther St., Kemah, TX 77565
Phone: 281-682-0864 or 713-562-5568
Email: willyg103@yahoo.com

*Only those persons/entities listed within the real property records on file in the Office of the Galveston County Clerk as a Grantee of the PROPERTY may serve as the PROPERTY OWNER'S designated contact(s) under the AGREEMENT. If the PROPERTY OWNER's wish to designate any other person, the PROPERTY OWNER must provide a certified copy of a Power of Attorney covering such transaction to the COUNTY or provide a certified copy of Letters of Appointment as Guardian of the Estate covering the person listed as the Grantee of the

PROPERTY. Such certified documents must be on file with the COUNTY prior to the execution of this AGREEMENT and a copy attached as EXHIBIT C.

ARTICLE III. ACRONYMS AND DEFINITIONS

A. Acronyms. The following acronyms have the meanings ascribed below for the purpose of this AGREEMENT:

1. ADA means the American with Disabilities Act and implementing regulations.
2. FEMA means the United States Department of Homeland Security Federal Emergency Management Agency.
3. GSA means the United States General Services Administration.
4. HMA Unified Guidance means the Hazard Mitigation Assistance Unified Guidance published June 1, 2010, by FEMA, which governs HMGP program implementation requirements.
5. ICC means Increased Cost of Compliance and refers to the coverage under the National Flood Insurance Program.
6. NFIA means the National Flood Insurance Act of 1968, as amended.
7. NFIP means the National Flood Insurance Program.
8. HMGP means the Hazard Mitigation Grant Program.
9. TDEM means the Texas Division of Emergency Management.
10. TWIA means the Texas Windstorm Insurance Association.

B. Definitions. The following terms shall have the meanings ascribed herein for the purposes of this AGREEMENT. Defined terms are also indicated by the use of all capitalized letters or parenthesis.

1. **AGREEMENT** means this Tri-Party Elevation Engineering Agreement. All EXHIBITS attached hereto are incorporated into and made a part of this AGREEMENT. The following EXHIBITS are included:
    a. EXHIBIT A. ENGINEER'S COST ESTIMATE
    b. EXHIBIT B. Contract between the COUNTY and ENGINEER
    c. EXHIBIT C. Any applicable Power of Attorney or Letters of Appointment as Guardian of Estate
    d. EXHIBIT D. DUTY TO INFORM form from PROPERTY OWNER
    e. EXHIBIT E. Blank FEMA Elevation Certificate and Instruction (2012 Edition) (FEMA Form 086-0-33) as an example.
    f. EXHIBIT F. EXAMPLE - MITIGATION OFFER/Declination Notice
    g. EXHIBIT G. TDEM-specific clauses
    h. EXHIBIT H. FEMA Record of Environmental Consideration
    i. EXHIBIT I. Sample Engineering and Construction Schedule
    j. EXHIBIT J. Proof of Medical Need
    k. EXHIBIT K. Conflict of Interest Disclosure
    l. EXHIBIT L. Model Acknowledgement of Conditions
    m. EXHIBIT M. Galveston County Appraisal Document

2. **CHANGE ORDER** means any change to the elements of this AGREEMENT, which requires review, agreement, and signature by all three PARTIES: the COUNTY, the ENGINEER, and the PROPERTY OWNER.

3. **COMMENCEMENT DATE** means the date represented on the NOTICE TO PROCEED from the COUNTY to the ENGINEER, which **marks the official start of the engineer-design process as authorized by the COUNTY. The NOTICE TO PROCEED will not be issued until the COUNTY's Purchasing Agent has approved and issued a Purchase Order.**

4. **COMPLETION DATE** means the expected date the engineering design will be complete. Any additional time needed for engineering design will require a CHANGE ORDER to this agreement. All extensions must be reviewed and approved by the COUNTY.

5. **COUNTY** means the County of Galveston, Texas, a political subdivision of the State of Texas, **serving as the subrecipient under TDEM and providing program oversight through its contracted grant administrator.**

6. **COUNTY AGENT** means any person, department, or contractor assigned or authorized by the COUNTY to perform duties under this AGREEMENT, including grant administration.

7. **ENGINEERING COST ESTIMATE** means the **projected amount** from the ENGINEER to inspect, assess, test, and **design the FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS** for the PROPERTY.

8. **ENVIRONMENTAL STANDARDS** means the applicable environmental standards established under 1) the National Environmental Policy Act of 1969 (P.L. 91-190) and Executive Order 11514; 2) notification of violating facilities pursuant to Executive Order 11738; 3) protection of wetlands pursuant to Executive Order 11990; 4) the Clean Air Act of 1970, as amended, 42 U.S.C. 7401 et seq; 5) the Federal Water Pollution Control Act, as amended, 33 U.S.C. 1251, et. Seq.; 6) Environmental Protection Agency regulations, 40 CFR, Part 50, as amended; 7) protection of underground sources of drinking water under the Safe Drinking Water Act of 1974, as amended (P.L. 93-523); and 8) protection of endangered species under the Endangered Species Act of 1973, as amended (P.L. 93-205), as applicable to engineering-related assessments and documentation under this AGREEMENT.

9. **FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS** means the engineered design from the ENGINEER for an individual property that has been reviewed, approved, **sealed by the licensed ENGINEER**, and signed by **an authorized representative of the COUNTY**. The plans **must not include any design elements outside the scope of work approved in the grant agreement.**

10. **FINAL COMPLETION** means the point when the ENGINEER has fulfilled all obligations under this AGREEMENT and the FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS have been accepted by an authorized representative of the COUNTY. The plans must not include any design elements outside the scope of work

approved by the grant agreement. Final Completion occurs when the following have been completed and submitted to the COUNTY:

a. Engineering deliverables outlined in the FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS.

b. All field reports, inspection notes, and verification of engineered recommendations provided.

c. A complete list of any subcontractors or third-party professionals who performed work on, or contributed to, the engineering deliverables.

d. Confirmation that all utilities and access conditions relevant to the design scope were properly assessed.

e. A preliminary elevation certificate or benchmark recommendation may be included by the ENGINEER, but the final FEMA Elevation Certificate (FEMA Form 086-0-33; see EXHIBIT E) will be provided post-construction.

f. Any additional items specifically required by the COUNTY under this AGREEMENT.

11. **FULL ELEVATION CONTRACT AMOUNT** means the total amount for both phases:

    a. the **ENGINEERING PHASE**, which includes initial inspections, testing, and the development of the **FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS**; and

    b. the **CONSTRUCTION PHASE**, which includes the bidding process, assessments, and elevation of the structure as identified in the **FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS** produced during Phase One.

This amount does not include any work beyond the FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS

12. **IMPROVEMENTS** mean the structure and related improvements on the PROPERTY that are eligible for elevation under the HMGP grant program guidelines, as outlined in the FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS. The HMGP grant program guidelines state elevation of a structure may consist of the following:
    a. Slab elevation.
    b. Slab separation and elevation.
    c. Pier and beam elevation.
    d. Piling and beam elevation.
    e. Demolition/Removal.
    f. Engineering Design.
    g. Construction, and/or
    h. Other required items as specified in the FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS.

13. **MATCH AMOUNT** means the 25% match required to be paid by the PROPERTY OWNER as required by the HMGP grant guidelines.

14. **MITIGATION OFFER** means the amount equal-to the "Total Budgeted PROJECT HARD COSTS minus NON-ELEVATION COSTS" as described in the FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS, in accordance with the terms and condition of this AGREEMENT. The price for specific items of work will be stated in the FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS.

15. **MODEL ACKNOWLEDGEMENT OF CONDITIONS FOR MITIGATION OF PROPERTY IN A SPECIAL FLOOD HAZARD AREA** means the mandatory form recorded with the property deed that confirms the PROPERTY OWNER's acceptance of grant program conditions, including the ongoing requirement to maintain National Flood Insurance Program (NFIP) coverage and comply with applicable floodplain management regulations.

16. **NON-ELEVATION COSTS** mean costs related to assessments, inspections, or recommendations made by the ENGINEER that are **outside the FEMA-approved scope** for elevation under the HMGP program. These may include recommendations for cosmetic repairs, remodels, additions, or unrelated code upgrades that are not essential to the elevation design. Such costs are **not reimbursable** under the HMGP grant and must be excluded from the FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS.

17. **NOTICE TO TEMPORARILY VACATE** means the notice to PROPERTY OWNER once the ELEVATION CONSTRUCTION CONTRACTOR has been awarded for the IMPROVEMENTS and they notify the COUNTY they will be ready to commence with construction within thirty (30) days.

18. **PRIMARY RESIDENCE** means a dwelling that the PROPERTY OENER has actually lived in for eighty percent (80%) of the prior consecutive 365 days or eighty percent (80%) of the period of ownership if the period of ownership is less than 365 days. Evidence of PRIMARY RESIDENCE may be established by providing copies of current driver's license, homestead exemption and/or like documents.

19. **PROGRAM** means the Galveston County Hazard Mitigation Grant Program (HMGP) where the COUNTY and the Texas Division of Emergency Management (TDEM) entered into contract number(s) DR-4332-0025 and DR-4332-0239 for the administration of this elevation grant program.

20. **PROJECT HARD COSTS** mean the total cost of the project including ELEVATION and NON-ELEVATION COSTS as identified in the FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS as well as TEMPORARY HOUSING.

21. **PROPERTY** means a specified parcel of real property that is the site of the structure to be elevated and includes the real property (land), the structure (e.g., home) and other improvements on the real property parcel.

22. **PROPERTY OWNER** means the eligible applicant(s) and recipient of the HMGP Elevation grant funds under this AGREEMENT as identified in the Introduction and Article II: Administrative Contacts of this AGREEMENT.

23. **RFQ** means **Request for Qualifications #B242004 issued by Galveston County** for the purpose of selecting and contracting with the ENGINEER to perform eligible engineering services under this AGREEMENT.

24. **TEMPORARY HOUSING** means a place to live for a limited period of time and for the purposes of this AGREEMENT and means the lodging costs incurred by the PROPERTY OWNER during the period of time that the PROPERTY OWNER is displaced from their PRIMARY RESIDENCE due to eligible elevation activities directly associated with this PROGRAM. TEMPORARY HOUSING is eligible for reimbursement to the PROPERTY OWNER only if the PROPERTY is proven to be the PRIMARY RESIDENCE of the PROPERTY OWNER and the costs are directly attributable to the period of time the PROPERTY OWNER is displaced from the PRIMARY RESIDENCE due to eligible activities directly associated with the FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS but does not include food, transportation costs or time associated with the activities associated with any NON-ELEVATION COSTS. TEMPORARY HOUSING costs eligible for reimbursement under the HMGP grant program are limited to reasonable lodging expenses and must be supported by receipts and proof of payment submitted by the PROPERTY OWNER to the COUNTY. These costs are eligible for **75% reimbursement through the HMGP grant**, with the **remaining 25% to be paid by the PROPERTY OWNER** as required by the program's cost-share requirements. TEMPORARY HOUSING costs are considered reasonable if the amounts are less than or equal to the per diem lodging rates established by the U.S. General Services Administration (GSA) for the WORKSITE location.

25. **WORK ORDER** means the work detail and project cost as defined in the FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS.

26. **WORKSITE** means the site within the PROPERTY where the elevation is occurring and any surrounding area within the PROPERTY necessary for the ELEVATION CONSTRUCTION CONTRACTOR's ingress to or egress from the property (entry or exit) to perform the elevation activities as defined in the FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS.

ARTICLE IV. ENGINEERING SERVICES COST SHARING AND PAYMENT SCHEDULE

This Article outlines the engineering-related financial obligations only and does not authorize or initiate construction activities.

1. Financial Summary:

ENGINEERING COST ESTIMATE	$ 17,200.00
COUNTY's Financial Responsibility (75%)	$ 12,900.00
PROPERTY OWNER MATCH AMOUNT (25%)	$ 4,300.00

2. Payments from PROPERTY OWNER
   a. Payment of the required 25% match from the PROPERTY OWNER in the form of a cashier's check is due at the time this AGREEMENT is signed. Payments will be deposited in a designated account at the COUNTY and a NOTICE TO PROCEED will be issued to the ENGINEER, which will allow the ENGINEER to proceed with inspections, assessments, testing and engineering activities.

ARTICLE V. PROPERTY OWNER'S OBLIGATIONS

A. **MATCH AMOUNT**: As outlined in Article IV, the required 25% match must be paid by the Property Owner at the time of agreement execution.

B. **REIMBURSEMENT**: If it is determined through assessments, inspections, and testing that the structure is not suitable for elevation, the ENGINEER will notify the COUNTY. The COUNTY will, in turn, notify the PROPERTY OWNER. A portion of the MATCH AMOUNT paid by the PROPERTY OWNER may be eligible for reimbursement, subject to COUNTY review and approval, depending on the stage of engineering services performed and allowable costs under the HMGP grant.

C. **MAINTAIN NFIP INSURANCE: The PROPERTY OWNER agrees to maintain flood insurance through the National Flood Insurance Program (NFIP) and not through private flood insurance programs, to insure against the loss of the real property in an amount at least equal to the project cost or assessed value of the real property (whichever is higher), and up to the NFIP maximum of $250,000.**

D. The PROPERTY OWNER acknowledges and agrees that the following notice of NFIP flood insurance requirements shall be legally recorded in the Official Real Property Records of the Galveston County Clerk's Office and will include: 1) The name of the current PROPERTY OWNER, 2) The book and page reference to record the current title, and 3) The legal description of the PROPERTY, and will state the following:

"This property has received Federal Hazard Mitigation Assistance. Federal Law requires that NFIP flood insurance coverage on this property must be maintained during the life of the property regardless of transfer of ownership of such property. Pursuant to 42 U.S.C. 515a, failure to maintain flood insurance on this property may prohibit the owner from receiving Federal disaster assistance with respect to this property in the event of a flood disaster. The property owner is also required to maintain this property in accordance with the floodplain management criteria of 44 CFR Part 60.3 and City/County Ordinance/Order."

Failure to comply with the NFIP insurance requirement may result in a lien on the PROPERTY.

PROPERTY OWNER: DO NOT SIGN THIS AGREEMENT IF YOU DO NOT FULLY UNDERSTAND THIS PROVISION

E. **TAXES**: PROPERTY OWNER shall pay all real estate taxes and assessments of every kind on PROPERTY before they become delinquent. The COUNTY may require, at any time, that the PROPERTY OWNER provides evidence that taxes have been paid and are current. Property taxes must either:

1. Be paid in full and current,
2. Be under a formal deferral, or
3. Be under an active and current payment plan with the Galveston County Tax Assessor and Collector.

This ensures the PROPERTY OWNER remains eligible to move forward in the PROGRAM.

F. **COOPERATION**: PROPERTY OWNER will cooperate with the reasonable requests of the ENGINEER, COUNTY, COUNTY AGENTS and TDEM regarding requests related to activities required to develop the FINAL APPROVED ENGINEERING PLANS AND SPECIFICAITONS. Such requests include access to the property for inspections, assessments, testing, and any required site visits or progress reviews by the COUNTY and COUNTY AGENT.

G. **DUTY TO INFORM**: PROPERTY OWNER is responsible for informing the ENGINEER of any known PROPERTY hazards including but not limited to:

Hazard	Present	Not-Present	Unknown
Asbestos		✓	
Lead Paint		✓	
Buried Lines	✓		
Septic Systems		✓	
Water Wells		✓	
Bees		✓	
Propane Tanks		✓	
Sinkholes		✓	
Other (specify):		✓	

The PROPERTY OWNER shall disclose any conditions that could impact testing, design, or field operations. This section references the responses provided by the PROPERTY OWNER on the DUTY TO INFORM form included as EXHIBIT D.

H. **MEDICAL NEEDS:** PROPERTY OWNER is responsible for notifying ENGINEER before signing this AGREEMENT of any medical issues in the family which could entitle the PROPERT OWNER to special types of accessibility accommodations. In a case where the PROPERTY OWNER or a member of the PROPERTY OWNER's family has a permanent physical disability, a licensed physician's written certification is required before handicapped/special needs access facilities can be allowed as an eligible cost of the project. Attach a copy of the Physician's written prescription for a medical need.

Person	Qualifying Disability	Physician's Written Certificate
Debra Wilson	Breathing, ASTHMA hip, joint	

I. **NO CHANGES TO THE FINAL APPROVED ENIGINERING PLAN AND SPECIFICAITONS:** PROPERTY OWNERS will have the opportunity to meet with the ENGINEER to discuss the engineered design of the elevation project. A final version with a rendering will be presented to the PROPERTY OWNER for review and any possible changes. Once the FINAL APPROVED ENGINEERING PLAN AND SPECIFICAITONS have been signed off on, no changes may be made without prior written approval from the COUNTY due to cost control and grant regulations. Any possible changes must be requested in writing and approved in writing by the COUNTY prior to implementation.NO EXTRAS: No unauthorized scope changes or additional services will be permitted from the ENGINEER without the COUNTY's prior written consent. This AGREEMENT pertains solely to engineering services. Any reference to construction or non-engineering activities is beyond the scope of this AGREEMENT and must be addressed separately through COUNTY approval.

J. **PRIOR LIEN HOLDER RIGHTS:** PROPERTY OWNER is required to certify by affidavit on EXHIBIT F the existence or non-existence of any prior lien (e.g., mortgage, deed of trust) on the PROPERTY. If such a lien exists, the PROPERTY OWNER must notify and obtain written consent from the lien holder before executing this AGREEMENT. PROPERTY OWNER further acknowledges that any existing lien on PROPERTY may include restrictions that prohibit the PROPERTY OWNER from entering into or performing this AGREEMENT. Failure to obtain such consent may constitute an event of default under the lien and could result in legal consequences, including foreclosure or loss of the PROPERTY. The COUNTY is not responsible for determining the existence of any lien or for securing consent from the lien holder. These responsibilities lie solely with the PROPERTY OWNER.

PROPERTY OWNER: DO NOT SIGN THIS AGREEMENT IF YOU DO NOT FULLY UNDERSTAND THIS PROVISION.

K. **PROPERTY OWNER'S REPRESENTATIONS:** PROPERTY OWNER represents the following to the COUNTY and ENGINEER:

1. PROPERTY OWNER is the fee simple owner of the PROPERTY – meaning they are the complete and total owner of the PROPERTY, which gives them the right to do anything they wish on the land as long as it falls within the established easements and zoning laws.
2. PROPERTY OWNER affirms that, aside from a standard mortgage or first-lien deed of trust, the PROPERTY is free from additional liens, claims, unpaid assessments, or encumbrances that may affect participation in this PROGRAM. If required, the PROPERTY OWNER shall assist the COUNTY in obtaining any necessary documentation or notifications from lienholders.
3. No written contract (or affidavit regarding an oral contract) related to the engineering design or elevation of all or any portion of the IMPROVEMENTS has been recorded in the Office of the County Clerk of Galveston County. The PROPERTY OWNER affirms that no third-party agreements exist that may conflict with the scope, intent, or funding requirements of this AGREEMENT.
4. All warranties, representations and certifications made, and all information and material submitted or caused to be submitted to the COUNTY in connection with the MITIGATION OFFER are true and correct, and there have been no material changes in or conditions affecting any of such warranties, representations, certifications, material or information prior to the date of the signing of this contract.
5. All financial statements delivered to the COUNTY by or on behalf of the PROPERTY OWNER are each true and correct in all respects and there has been no material adverse change in such statements as of the date of the signing of this contract.
6. PROPERTY OWNER is solvent, is not bankrupt, has not committed any act of bankruptcy, and has no outstanding liens, suits, garnishments, bankruptcies, or court actions which could render them insolvent. If solvency concerns exist or a bankruptcy has occurred, the PROPERTY OWNER must have disclosed them to the COUNTY prior to signing, and the COUNTY must execute this AGREEMENT with full awareness of such disclosures.

L. **ASSIGNMENTS:** PROPERTY OWNER shall not assign or otherwise transfer this AGREEMENT, in whole or in part, without prior written approval of the COUNTY. If such consent is granted, the COUNTY may require that the original PROPERTY OWNER remain responsible for obligations under this AGREEMENT unless the COUNTY approves a full substitution of parties in writing.

In the event of the death or incapacitation of the PROPERTY OWNER, any successor in interest (e.g., heir, executor, or legal representative) must promptly notify the COUNTY and submit documentation of legal authority. Such successor shall be required to either:

(a) assume full responsibility under this AGREEMENT, subject to COUNTY approval; or
(b) formally withdraw from the PROGRAM under COUNTY-defined procedures, which may include reimbursement obligations if Federal funds have been expended.

M. **FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS** will be presented to the PROPERTY OWNER for review, acceptance, and execution at the completion of the engineering phase. If the PROPERTY OWNER **accepts**, they must return an executed copy of the FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS to the COUNTY within **seven (7) calendar days** of the ENGINEER's presentation.

If the PROPERTY OWNER **does not accept**, they must provide written notice to the COUNTY within the same seven (7) calendar day period, stating the reason(s) for non-acceptance.

No further actions by the COUNTY or ENGINEER will proceed without written acceptance of the FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS by the PROPERTY OWNER.In cases where no response is received within the allotted time, the COUNTY reserves the right to determine the next steps, which may include pausing the project, issuing a formal withdrawal notice, or offering a limited extension.

N. **INDEMNITY:** To the extent permitted by law, the PROPERTY OWNER agrees to indemnify, defend, and hold harmless the COUNTY, the State of Texas, the ENGINEER, and any designated COUNTY AGENT from and against any and all claims, damages, losses, or expenses (including reasonable attorneys' fees) arising out of or resulting from the PROPERTY OWNER's negligent acts, errors, or omissions under this AGREEMENT.

O. **STATE PROVISIONS: PROPERTY** OWNER must comply with all applicable provisions listed in EXHIBIT G (TDEM-Specific Clauses) of this AGREEMENT.

ARTICLE VI. ENGINEER OBLIGATIONS

A. **Standards of Elevation:** In addition to the other requirements of this AGREEMENT, the IMPROVEMENTS will be engineered in a good and professional manner, fit for their intended purpose, fully equipped with materials of high quality, strictly in accordance with each of the following, as applicable: (i) the WORK ORDER; (ii) the FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS; (iii) the RFQ; (iv) the Environmental Standards; (v) FEMA Floodplain regulations; (vi) if applicable, TWIA requirements, and (vii) all applicable federal, state, and local laws, rules and regulations including the International Residential Code (IRC) and Minimum Property Standards (MPS).

B. **No changes to the Scope of Work:** Once the FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS are reviewed, agreed-upon, and signed, no changes shall be made except with the prior written approval of the COUNTY. This AGREEMENT does not authorize construction activities. Any construction or material changes made by an ELEVATION CONSTRUCTION CONTRACTOR or subcontractor must be addressed under a separate construction agreement and are subject to COUNTY review and approval.

C. **Corrective Action:** If the ENGINEER identifies any issues based on the engineering scope that may affect the design, safety, or feasibility of elevation activities, the ENGINEER

shall promptly notify the COUNTY and recommend corrective actions as appropriate. ENGINEER shall maintain a detailed record of all such issues, including documentation of any pre-existing damages observed during inspections or assessments. These damages must be clearly noted in the FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS. The PROPERTY OWNER will be required to sign off on this documentation to acknowledge the condition of the property prior to elevation construction.

D. **Records Retention:** ENGINEER shall keep and maintain all records associated with this AGREEMENT for a minimum of seven (7) years from the formal closure of the grant project with the State, or for the duration required by applicable Federal, State, or Local laws — whichever period is longer. ENGINEER shall allow the COUNTY reasonable access to the records in the ENGINEER's possession, custody, or control that the COUNTY deems necessary to assist in auditing the services, costs, and payments provided under this AGREEMENT. ENGINEER shall also allow reasonable access to representatives of the State of Texas granting agency, the Office of Inspector General, the General Accounting Office, and other applicable State or Federal agencies, as applicable, that such entities deem necessary to facilitate review by such agencies.

E. **Prompt Payment:** ENGINEER will promptly pay all subcontractors or third-party professionals associated with assessments, preliminary elevation certificates (if applicable), testing, and other services associated with the development of the FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS.

F. **Allocation of Profit:** ENGINEER agrees that any monies received pursuant to this AGREEMENT shall first be applied to the payment of all outstanding invoices from subcontractors or service providers involved in assessments, testing, or other engineering tasks, before any portion is applied to ENGINEER's overhead or profit.

G. **Debarment and Suspension:** ENGINEER certifies that it is not ineligible for participation in federal or state assistance programs under Executive Order 12549, Debarment and Suspension, or any other applicable federal responsibility matters. ENGINEER agrees to include this certification in all contracts between itself and any subcontractors associated with surveying, testing, or other activities conducted under this AGREEMENT. If at any time ENGINEER becomes noncompliant with Executive Order 12549 or other applicable regulations, it shall immediately notify the COUNTY in writing and refund any payments received under this AGREEMENT during the period of ineligibility.

H. **Equal Opportunity / Non-Discrimination:** ENGINEER agrees to comply with all applicable Federal, State, and Local regulations relating to equal opportunity for all persons, without discrimination based on race, color, religion, national origin, sex, familial status, disability, or veteran status. ENGINEER further agrees to include this certification in all contracts with subcontractors or third parties engaged in surveying, testing, or other services performed under this AGREEMENT.

I. **Assignment:** ENGINEER shall not assign or otherwise transfer this AGREEMENT in whole or in part without the prior written approval of the COUNTY acting by and through its Commissioners Court. Such consent, if granted, shall not relieve the ENGINEER of any of its responsibilities under this AGREEMENT. A violation of this prohibition shall be a

material default under the AGREEMENT and grounds for immediate termination of this AGREEMENT.

J. **Latent Site Conditions:** Under no circumstances will the ENGINEER be responsible for any costs incurred with respect to hidden or unknown defects that exist at the project site. Any and all costs incurred by the ENGINEER in connection with identifying, addressing, or mitigating such latent or unknown conditions shall be recoverable by the ENGINEER, subject to prior written approval by the COUNTY.

K. **Indemnity:** To the extent permitted by law, the ENGINEER agrees to indemnify, defend, and hold harmless the COUNTY, the State of Texas, and the PROPERTY OWNER from and against any claims, liabilities, damages, or expenses incurred by the COUNTY or PROPERTY OWNER, to the extent caused by the ENGINEER's negligent acts, errors, or omissions in connection with the performance of this AGREEMENT.

L. **Note:** This AGREEMENT pertains solely to engineering services. Any references to construction activities in Article VI are for context or coordination purposes only. They do not expand the ENGINEER's scope, responsibilities, or liability to include construction services. All construction activities are governed under a separate agreement.

M. **Conflict of Interest Disclosure**: The ENGINEER has completed and submitted a Conflict-of-Interest Questionnaire (CIQ) as required under Chapter 176 of the Texas Local Government Code. The completed CIQ is attached to this AGREEMENT as Exhibit K and is incorporated herein by reference. The ENGINEER agrees to update the CIQ within seven (7) days of any event that would require a change in the information disclosed. This obligation remains in effect throughout the term of this AGREEMENT.

N. **DUE DILIGENCE RESPONSIBILITY:** ENGINEER is solely responsible for determining whether elevation activities will interfere with any recorded instrument, deed restriction, easement, or regulation affecting the PROPERTY. The COUNTY makes no warranty regarding title or encumbrances.

ARTICLE VII. GALVESTON COUNTY'S LIMITED OBLIGATIONS

A. Limited Obligation of COUNTY: The COUNTY's obligation to the PROPERTY OWNER and ENGINEER, or either of them, is limited to disbursing the MITIGATION OFFER amount in accordance with the terms and conditions of this AGREEMENT. No additional obligation or liability is implied or assumed by the COUNTY beyond this disbursement.

B. **Non-Responsibility of COUNTY for Third-Party Actions:** The COUNTY is not responsible for any of the following (this list is illustrative, and not exclusive):
   a. The quality or timing of the ENGINEER's services to develop the FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS;
   b. The quality or timing of the elevation construction;
   c. Resolution of disputes between the ENGINEER and PROPERTY OWNER;
   d. Enforcement of this AGREEMENT, or any other agreement between the ENGINEER and the PROPERTY OWNER;
   e. Payment of PROPERTY OWNER's funds to ENGINEER regarding excess engineering costs above the MITIGATION OFFER amount;
   f. Removal of liens;
   g. Curing title defects;

h. Acts or omissions of the ENGINEER, PROPERTY OWNER, or other contractor or supplier.

C. **Actions Do Not Create Duty:** The COUNTY's funding activities under the PROGRAM do not create a legal duty to the ENGINEER or the PROPERTY OWNER. The COUNTY's actions or inactions in making inspections of the PROPERTY, procuring sworn statements and waivers of liens, screening ENGINEER and PROPERTY OWNER, approving contracts and subcontracts, and approving the FINAL APPROVED ENGINEERED PLANS AND SPECIFICATIONS will be taken by the COUNTY solely for its own protection. Except for the COUNTY's express obligations under this AGREEMENT, nothing herein shall be construed to create any obligation or liability on the part of the COUNTY to the ENGINEER, PROPERTY OWNER, or any other person with respect to any action, proper construction of the IMPROVEMENTS, performance of contracts or subcontracts by the ENGINEER or subcontractors, or prevention of claims for mechanic's liens.

D. **Limitation of Warranties:** To the fullest extent allowed by law, the COUNTY makes no warranties of any kind, express or implied, to the PROPERTY OWNER, and the PROPERTY OWNER waives all warranties and representations from the COUNTY, whether oral or written, whether expressed or implied, concerning the PROPERTY or IMPROVEMENTS, including, without limitation, any warranty of habitability, fitness for a particular purpose, or construction in a good and workmanlike manner. Nothing herein shall be construed to limit the ENGINEER's responsibilities to the PROPERTY OWNER.

ARTICLE VIII. DEFAULT AND REMEDIES

A. **ENGINEER Default:** ENGINEER will be in default under this AGREEMENT upon the occurrence of any of the following events:

(i) ENGINEER fails to perform the terms of this AGREEMENT, and such failure continues for three (3) business days after delivery of written notice of the failure;

(ii) ENGINEER becomes insolvent or unable to pay its debts as they become due, or declares bankruptcy, or makes an assignment for the benefit of creditors; or

(iii) ENGINEER commits a default under any other contract it has entered into with Galveston County.

In the event of the ENGINEER's default, Galveston County shall have the right, without prejudice to any other right or remedy, to take any, all, or none of the following actions, at its sole discretion:

a. Terminate this AGREEMENT on written notice to ENGINEER.
b. Compel the ENGINEER to stop the work under this AGREEMENT on written notice to the ENGINEER, whereupon the ENGINEER shall withdraw from the project and assign to the COUNTY all subcontractors as the COUNTY may request, and transfer all assessments, testing, permitting, plans, and specifications developed to date as the COUNTY may direct.

c. Complete the work, either with or without using ENGINEER's assessments, testing, permitting, plans, and specifications.
d. Withhold payment of any further sums due to ENGINEER under this AGREEMENT, until after FINAL COMPLETION of the IMPROVEMENTS, whereupon the COUNTY shall determine the amount, if any, of damages caused by the ENGINEER's default, the amount to which ENGINEER is entitled for its performance of the work up to the date of such termination, and the amount, with due regard to the circumstances of termination, sufficient to equitably compensate the ENGINEER for the use of the ENGINEER's assessments, testing, permitting, plans and specifications. Upon such determination, COUNTY shall pay to the ENGINEER the net amount which may be due, if any, in accordance with such determination.
e. Sue ENGINEER for damages, injunctive, or equitable relief.

In addition to the remedies stated here, the COUNTY has the right to pursue other remedies permitted by law or in equity. The COUNTY's waiver of any event of default under this AGREEMENT shall not operate as a waiver of any subsequent default under the terms of this AGREEMENT.

B. **PROPERTY OWNER's Default**: PROPERTY OWNER will be in default under this AGREEMENT upon the occurrence of any of the following events:
   a. PROPERTY OWNER fails to perform the terms of this AGREEMENT, and such failure continues for three (3) business days after delivery of written notice of the failure.
   b. PROPERTY OWNER becomes insolvent or unable to pay its debts as they become due, declares bankruptcy, or makes an assignment for the benefit of creditors.
   c. PROPERTY OWNER is in default under any other contract it has entered into with Galveston County.
   d. PROPERTY OWNER has misused the proceeds of this MITIGATION OFFER.
   e. PROPERTY OWNER has made material misrepresentations in connection with this AGREEMENT. In the event of PROPERTY OWNER's default, the COUNTY shall have the right, without prejudice to any other right or remedy, to take any, all, or none of the following actions at its sole discretion:
      i. Terminate this AGREEMENT upon written notice to the PROPERTY OWNER.
      ii. Direct the ENGINEER to stop the work under this AGREEMENT, either temporarily or permanently. Notwithstanding the foregoing, sums earned or incurred by the ENGINEER through the date of termination shall be preserved subject to COUNTY review.
      iii. Withhold payment of any further sums due to the ENGINEER for any unearned portion of the activities described under this AGREEMENT.
      iv. Pursue damages, injunctive, or equitable relief as permitted by law.

C. **COUNTY's Discretionary Termination:** The COUNTY reserves the right to terminate this AGREEMENT, in whole or in part, upon written notice to the ENGINEER and PROPERTY OWNER, if continued performance is determined to be contrary to federal or state grant requirements, administratively infeasible, or inconsistent with the COUNTY's mitigation program objectives. In such an event, the COUNTY will compensate the ENGINEER for all eligible and documented services satisfactorily performed up to the effective date of termination, subject to FEMA and TDEM approval.

ARTICLE IX. MISCELLANEOUS PROVISIONS

A. **Relationship of the parties to this AGREEMENT**: ENGINEER is an independent contractor in all respects with regard to this AGREEMENT. Nothing contained in this AGREEMENT shall be deemed or construed to create a partnership, joint venture, agency, employment, or other relationship between and among the parties, other than that of independent entities contracting with each other solely for the purpose of carrying out the provisions of this AGREEMENT.

B. **Immunity Retained:** The parties to this AGREEMENT agree that by entering into this AGREEMENT, the COUNTY has not waived any immunity it may have at common law or otherwise. The COUNTY specifically reserves any and all defenses, including but not limited to claims of sovereign, qualified, or official immunity, against any action arising in conjunction with this AGREEMENT. The COUNTY does not waive or in any way relinquish any immunity or defense on behalf of itself, its elected officials, officers, employees, or agents as a result of its execution of this AGREEMENT and performance of the covenants contained herein.

C. **Inspection:** Representatives from the Federal Government, the State, the COUNTY, and their designees shall have the right to inspect all work performed under this AGREEMENT. ENGINEER and PROPERTY OWNER shall take all steps necessary to ensure that representatives from the Federal Government, the State, the COUNTY, or their designees are permitted to examine and inspect all documentation, assessments, testing results, permits, plans, and specifications related to this AGREEMENT. Such inspections shall not constitute acceptance of work, nor shall they impose any responsibility on the Federal Government, the State, or the COUNTY for defective work, nor shall they relieve either party of liability for breach of this AGREEMENT.

D. **Notice:** Any notice required or permitted by this AGREEMENT shall be in writing and shall be delivered to the respective party or parties as addressed in ARTICLE II: ADMINISTRATIVE CONTACTS. Any notice shall be deemed delivered—whether actually received or not—when deposited in the United States mail, postage fully paid, via certified mail, and addressed to the intended recipient at the notice address set forth on the Cover Page and in ARTICLE II: ADMINISTRATIVE CONTACTS. Notice given in any other manner shall be effective only if and when received by the intended recipient. Any change of address for notice must be communicated in writing and delivered in accordance with the CHANGE ORDER process under this AGREEMENT.

E. **Entirety of Agreement:** This AGREEMENT contains the entire agreement and understanding among the parties and supersedes and replaces any and all prior or contemporaneous proposals, agreements, promises, negotiations, understandings, commitments, and/or representations of any kind, whether written or oral, relating to the subject matter of this AGREEMENT or the services or deliverables to be provided under it.

F. **Duty to Provide Additional Information:** PROPERTY OWNER and ENGINEER shall, within three (3) business days of receipt, furnish to the COUNTY copies of all notices received that pertain to the PROPERTY, including notices from any of the following:
   a. Any governmental or private authority having jurisdiction over the PROPERTY;
   b. Any insurance company carrying a policy pertaining to the PROPERTY;
   c. Any lender holding a lien or security interest against any part of the PROPERTY; or
   d. Any person asserting a claim against the PROPERTY OWNER, ENGINEER, or the PROPERTY.

G. **Governing Law and Venue:** This AGREEMENT and the rights and obligations of the parties shall be governed by and construed in accordance with the laws of the State of Texas, and venue shall lie exclusively in Galveston County, Texas.

H. **Severability:** If any provision of this AGREEMENT is held to be invalid, illegal, or unenforceable in any respect, such invalidity, illegality, or unenforceability shall not affect the validity of the remaining provisions, and this AGREEMENT shall be construed as if such invalid, illegal, or unenforceable provision had never been included.

I. **Validity/Enforceability:** If any current or future legal limitations affect the validity or enforceability of a provision of this AGREEMENT, then such legal limitations shall be deemed a part of this AGREEMENT and shall operate to amend or modify the affected provision to the minimum extent necessary to bring it into conformity with applicable law. As so modified, this AGREEMENT shall remain in full force and effect.

J. **Force Majeure:** No party to this AGREEMENT shall be liable for any failure or delay in performance of its obligations under this AGREEMENT to the extent such failure or delay is caused by acts of God, acts of public enemies, fires, floods, power outages, wars, civil disturbances, epidemics, pandemics, sabotage, terrorism, accidents, insurrections, blockades, embargoes, storms, explosions, labor disputes (regardless of whether employee demands are reasonable or within the party's power to satisfy), failures of common carriers, internet service providers, or other communication systems, cyberattacks, criminal acts, acts of governmental authorities (civil or military, domestic or foreign), or the failure or delay of third parties or agencies from whom a party must obtain approvals, licenses, permits, or materials (collectively, "Force Majeure Occurrences"). Any resulting delay shall not constitute a breach of this AGREEMENT, and all affected deadlines shall be extended for a period equal to the time lost due to such delays. No party shall be liable to the other for any claims, damages, or losses resulting from a Force Majeure Occurrence.

K. **Authority:** Each party to this AGREEMENT represents and warrants that the individual executing this AGREEMENT on its behalf has full power and authority to do so, and that this AGREEMENT constitutes the legal, valid, and binding obligation of each party.

L. **Amendment:** This AGREEMENT may be amended only by a **written instrument signed by all parties** to this AGREEMENT, with each party's authorization properly documented.

M. **Survival:** The provisions of **ARTICLES I, II, IV, VI(G), VII(C), (D), IX(B), (J), X, XI** and EXHIBIT G – TDEM Specific Clauses shall survive the termination or expiration of this AGREEMENT.

ARTICLE X. DUPLICATION OF BENEFITS & LEGAL SETTLEMENTS

The PROPERTY OWNER agrees to notify the COUNTY in writing of any financial settlement, insurance claim, grant payment, or legal judgment received that relates, in whole or in part, to the HMGP-funded elevation of the subject PROPERTY. The PROPERTY OWNER acknowledges and agrees that any such funds received for the same purpose as assistance provided under this AGREEMENT may constitute a Duplication of Benefits (DOB) and may result in a reduction of current or future grant funds or a required repayment to the COUNTY.

This includes, but is not limited to, payments or reimbursements from:

- Lawsuits related to structural damages or construction defects;
- Insurance claims following disasters;
- ICC (Increased Cost of Compliance) proceeds;
- Private grants or other FEMA-funded programs.

This obligation to disclose is required by Section 312 of the Robert T. Stafford Disaster Relief and Emergency Assistance Act (42 U.S.C. § 5155). Failure to disclose these funds may constitute a material breach of this AGREEMENT and could result in disqualification from future FEMA assistance or legal recovery actions by the COUNTY.

PROPERTY OWNER: DO NOT SIGN THIS AGREEMENT IF YOU DO NOT FULLY UNDERSTAND THIS PROVISION.

ARTICLE XI. DISPUTE RESOLUTION

In the event of a disagreement, dispute, or claim arising from or related to this AGREEMENT, including but not limited to the performance, interpretation, application, or breach of any term herein, the following process shall govern:

A. **Notice and Initial Resolution Effort:** The PARTY asserting a dispute shall notify the other PARTY/PARTIES in writing, clearly identifying the nature of the dispute, the impacted provisions of the AGREEMENT, and the requested resolution. Upon receipt of such notice, the PARTIES shall make a good faith effort to resolve the dispute through informal discussion within ten (10) business days.

B. **COUNTY Review and Determination:** If the dispute is not resolved informally, the COUNTY shall have the authority to review the matter and issue a written determination within fifteen (15) business days. The COUNTY's decision shall be based on applicable contract terms, FEMA program rules and regulations, and any supporting documentation submitted by the PARTIES.

C. **Non-Binding Mediation (Optional):** Should either the ENGINEER or PROPERTY OWNER disagree with the COUNTY's determination, the PARTY may submit a written request to enter into non-binding mediation. Mediation shall only proceed if the COUNTY agrees to participate. Mediation shall be conducted by a mutually agreed-upon mediator with FEMA or engineering contract expertise, and the process shall occur within thirty (30) calendar days of the request. Costs associated with mediation shall be shared equally by the requesting PARTIES. Nothing in this clause shall be construed to require the COUNTY's participation in disputes solely between the ENGINEER and the PROPERTY OWNER.

D. **No Waiver of Legal Rights:** Participation in any portion of this dispute resolution process does not waive any PARTY's legal rights, including the COUNTY's right to seek immediate injunctive relief or to terminate this AGREEMENT under ARTICLE VIII. This section is intended to provide a structured resolution process while preserving all remedies available at law or in equity.

E. **Continued Performance: Unless** otherwise directed by the COUNTY, all PARTIES shall continue to fulfill their obligations under this AGREEMENT during the dispute resolution process.

F. The County reserves the right to terminate this Agreement in the event of noncompliance, homeowner withdrawal, or failure to adhere to program timelines or requirements.

PROPERTY OWNER: DO NOT SIGN THIS AGREEMENT IF YOU DO NOT FULLY UNDERSTAND THIS PROVISION.

AGREEMENT FOR ENGINEERING SERVICES

PARTIES

This Agreement for Engineering Services (the "Agreement") is made and entered into by and between the County of Galveston, a political subdivision of the State of Texas, acting by and through its Galveston County Commissioners Court (the "County"), and Aran Franklin Engineering, Inc. (the "Engineer"), each of whom is a Party hereto and who are collectively referred to herein as the Parties. This Agreement is to perform engineering services for home elevation within the County (the "Project"), which is further described herein and which such services are within the scope of the practice of engineering.

RECITALS

The County conducted a Request for Qualifications, Number RFQ #B242004, entitled "Galveston County Home Elevation Engineering Services" (the "RFQ"), to procure professional engineers to engineer-design the elevation of single-family dwellings impacted by Hurricane Harvey through the County to mitigate against future flooding (the "Project"), which is further described herein and which such services are within the scope of the practice of engineering. The terms of the RFQ and submitter's proposal are fully incorporated herein as part of the contract as if fully stated in this document.

The Engineer timely submitted a statement of qualifications in the RFQ, is a licensed engineer in the State of Texas, and wishes to perform said services.

Now Therefore, for and in consideration of the covenants and agreements contained herein, the receipt and sufficiency of which is hereby acknowledged, the Parties agree as follows:

CONTRACTUAL UNDERTAKINGS

SECTION I RETENTION OF ENGINEER

The County, by and through this Agreement, retains the Engineer to perform professional engineering services in connection with the Project, and the Engineer, by and through this Agreement, agrees to perform said professional engineering services in connection with the Project.

SECTION II
CHARACTER AND EXTENT OF SERVICES

The Engineer shall render professional engineering services necessary for the development of the Project, limited to the following and performed in accordance with existing local, State and Federal regulations, as set out in the Scope of Services attached hereto as Exhibit "A".

The Scope of Services and Response attached hereto as Exhibit "A" is also made a part of this Agreement for all purposes. But, if any terms of Exhibit "A" conflicts with any existing State of Texas, Texas Department of Transportation, local, or Federal laws, rules or regulations, the State, Federal or local laws, rules or regulations shall control.

The character and extent of services outlined above shall be considered complete upon approval by the County, acting by and through its Grants Administration Manager, of the various drawings, data, and tasks outlined in Exhibit "A".

All Services provided by Engineer shall be of good quality and shall be performed in a professional manner. The standard of care for all professional engineering and related Services performed or furnished by Engineer and the Response under this Agreement will be the care and skill ordinarily used by other competent engineers practicing under the same or similar circumstances and professional license. Engineer will re-perform any Services not meeting this standard without additional compensation. Engineer will perform its services as expeditiously as is prudent considering the ordinary professional skill and care of a competent engineer.

Additional services that may be required after approval of these documents by the County, or required by State or Federal regulations published in the State or Federal Register after the date of execution of this Agreement, shall not be considered as covered by the initial price and scope of this agreement. If the foregoing occurs or for any other required changes in scope, County and Engineer will attempt to negotiate a change order first on a flat fee basis.

SECTION III PERIOD OF SERVICES

This Agreement shall be effective upon execution by the County and by the Engineer, with the date of the Party signing last in time, and shall remain in force until satisfactory completion of all services described herein or termination under the provisions hereinafter provided in section VIII.

After execution of Agreement, Engineer shall submit a Project Time Schedule to the Grants Administration Manager, which shall be diligently followed during performance of services. It is understood by the County that the Engineer will make every effort to expedite completion of the Project.

SECTION IV
COORDINATION WITH THE COUNTY

The Engineer agrees to perform the services diligently after authorization to proceed. The Engineer agrees to perform all other services diligently and within the agreed upon time schedule.

The Engineer shall hold periodic conferences with the Grants Administration Manager to the end that the Project, as perfected, shall have full benefit of the County's experience and knowledge of existing needs and facilities and be consistent with the County's current policies and construction standards.

To implement this coordination, the Grants Administration Manager shall make available to the Engineer for use in the Project, all existing plans, maps, field notes, statistics, computations, and other data in its possession relative to the Project. Engineer shall submit a monthly progress report

of project status to the Grants Administration Manager and the Grants Administration Manager is the County's designated point of contact for this Agreement.

SECTION V
THE ENGINEERS'S COMPENSATION

As set forth in Exhibit "A" attached hereto, the County shall compensate the Engineer for services performed under this Agreement per the compensation amounts shown in Exhibit "A" for design and construction phase services.

Notwithstanding the foregoing, the maximum amount payable under this Contract is $500,000.00 including expenses which the Engineer exceeds at its own risk. The maximum amount payable may be revised in the event of changes in extent, complexity, or character of work requiring such revisions upon the prior mutual, written agreement by the County and the Engineer. No revisions in the maximum amount payable will be permitted unless previously authorized in writing by the County.

Payments to the Engineer for authorized services will be made by the County within 45 calendar days upon presentation of monthly statements by the Engineer to the County reflecting Engineer's performance of such services, unless disputed by the County. Additionally, the County agrees that it shall review the monthly statements and if disputing, shall notify the Engineer of the County's dispute no later than thirty (30) days after the County's receipt of the monthly statement. All remittances shall be mailed or delivered to Engineer's office. Engineer further agrees that all monthly statements shall detail its services under this Agreement and, if this Agreement is funded through Federal dollars, comply with applicable Federal requirements associated with costs.

SECTION VI
OWNERSHIP OF DOCUMENTS

Original documents, plans, designs and survey notes ("Documents") belong to and remain the property of the County, in consideration of which it is mutually agreed that the County will use them solely in connection with the Project or as required by law, save with the express consent of the Engineer. The Engineer may retain copies of such Documents.

County contracts are subject to all legal requirements provided by county, state or federal statutes, rules and regulations.

Engineer acknowledges that Galveston County is a governmental entity which conducts its meetings in accordance with the Texas Open Meetings Act and whose certain records are available to the public under the Texas Public Information Act. In accordance with Title 5, Chapters 551 and 552 of the Texas Government Code, this Agreement is an open record under the Public Information Act and as such, will be discussed and voted upon in a public meeting. Any request made to either inspect or acquire a copy of this Agreement or the Documents produced as a result of this Agreement will not violate the terms of this Agreement.

SECTION VII
DISPUTE RESOLUTION

If a dispute arises out of or relates to a breach of this Agreement, and if the dispute cannot be settled through negotiation, then the Engineer and the County agree to submit the dispute to mediation. In the event the Engineer or the County desires to mediate any dispute, it shall notify the other Party in writing of the dispute desired to be mediated. If the Parties are unable to resolve their differences within ten days of the receipt of such notice, such dispute shall be submitted for mediation in accordance with the procedures and rules of the American Arbitration Association (or any successor organization) then in effect. The deadline for submitting the dispute to mediation can be changed if the Parties mutually agree in writing to extend the time between receipt of notice and submission of mediation. The expenses of the mediator shall be shared 50 percent by the Engineer and 50 percent by the County. This requirement to seek mediation shall be a condition required before filing an action at law or in equity.

SECTION VIII
TERMINATION

The County may terminate the Agreement with or without cause, or for convenience by giving to the Engineer at least thirty (30) calendar days' advance notice in writing. Upon receipt or delivery of such notice, the Engineer shall discontinue all services in connection with the performance of this Agreement and shall proceed to cancel promptly all existing orders and contracts insofar as such orders or contracts are chargeable to this Agreement. As soon as practicable after receipt of notice of termination, the Engineer shall submit a statement showing in detail, the services performed under this Agreement to the date of termination.

The County shall then pay the Engineer promptly for that portion of the prescribed charges which the services actually performed under this Agreement bear to the total services called for under the Agreement, less such payments on account of the charges as have been previously made. Copies of all completed or partially completed surveys, reports, designs, plans, specifications and all other documents prepared under this Agreement shall be delivered to the County Engineer when and if this agreement is terminated, but subject to the restrictions, as to their use, as set forth in Section VI.

SECTION IX
INSURANCE

The Engineer shall obtain and maintain, throughout the term of the Agreement, insurance of the types and in the minimum amounts set forth below.

The Engineer shall, upon request by the County, furnish certificates of insurance to the County evidencing compliance with the insurance requirements herein. Certificates shall indicate name of the Engineer, name of insurance company, policy number, and terms and limits of coverage. The Engineer shall cause its insurance companies to provide the County with at least thirty (30) days' prior written notice of any reduction in the limit of liability by endorsement of the policy, cancellation or non-renewal of the insurance coverage required under this Agreement. The Engineer

shall obtain such insurance from such companies having a Best's rating of B+/VII or better, licensed or approved to transact business in the state in which the Services shall be performed, Texas, and shall obtain such insurance of the following types and minimum limits.

a. Workers' Compensation insurance in accordance with the Laws of the State of Texas, or state of hire/location of Services, and Employer's Liability coverage with a limit of not less than $500,000 each employee for Occupational Disease; $500,000 policy limit for Occupational Disease; and Employer's Liability of $500,000 each accident.

b. Commercial General Liability insurance including coverage for Products/Completed Operations, Blanket Contractual, Contractors' Protective Liability, Broad Form Property Damage, Personal Injury/Advertising Liability, and Bodily Injury and Property Damage with limits of not less than:

$2,000,000	general aggregate limit
$1,000,000	each occurrence, combined single limit
$1,000,000	aggregate Products, combined single limit
$1,000,000	aggregate Personal Injury/Advertising Liability
$50,000	Fire Legal Liability
$5,000	Premises Medical

c. Business Automobile Liability coverage applying to owned, non-owned and hired automobiles with limits not less than $1,000,000 each occurrence combined single limit for Bodily Injury and Property Damage combined.

d. Umbrella Excess Liability insurance written as excess of Employer's Liability, with limits not less than $1,000,000 each occurrence combined single limit.

e. Professional Liability insurance with limits not less than $1,000,000 each claim/annual aggregate.

The County and the County's agents and employees shall be added as additional insureds to all coverages required above, except for those requirements in paragraphs "a" and "e". All policies written on behalf of the Engineer shall contain a waiver of subrogation in favor of the County and the County's agents and employees, with the exception of insurance required under paragraph "e". Additionally, the Contractor's commercial general liability insurance must provide any defense provided by the policy to Galveston County, its officials, employees, and agents.

SECTION X
VENUE AND CHOICE OF LAW

This Agreement shall be construed and enforced for all purposes pursuant to the laws of the State of Texas. Venue shall lie exclusively in a court of competent jurisdiction in Galveston County, Texas.

SECTION XI
ADDRESS OF NOTICES AND COMMUNICATIONS

All notices and communications under this Agreement to be mailed or delivered to Engineer shall be to the following address:

Chandra Franklin Womack, P.E.
Aran & Franklin Engineering, Inc.
8419 Emmett F. Lowry
Texas City, TX 77591-2249

All notices and communications under this Agreement to be mailed or delivered to the County shall be to the following address:

Mark Henry, Galveston County Judge
Galveston County Courthouse
722 Moody, 2nd Floor
Galveston, Texas 77550

With a copy to:

Grants Administration Manager,
Professional Services
722 Moody Ave., 3rd Floor
Galveston, Texas 77550

SECTION XII
SECTION CAPTIONS

Each section under the contractual undertakings has been supplied with a caption to serve only as a guide to the contents. The caption does not control the meaning of any section or in any way determine its interpretation or application.

SECTION XIII
SUCCESSORS AND ASSIGNS

The County and the Engineer each binds itself and its successors, and assigns to the other Party of this Agreement and to the successors, and assigns of such other Party in respect to all provisions of this Agreement. Except as above, neither the County nor the Engineer shall assign, subcontract, or otherwise transfer their interest in this Agreement without the prior written consent of the other Party. Nothing herein shall be construed as creating any personal liability on the part of any officer or agent of any public body which may be a party thereto.

SECTION XIV
ADDITIONAL TERMS

14.1 PROCUREMENT REQUIREMENTS

Engineer shall comply with all applicable local, State, and Federal laws, rules, regulations, orders, and ordinances. This includes, but is not limited to, that Engineer shall comply with the Galveston County Purchasing Policies & Procedures Manual approved by Order of the Commissioners Court on March 7, 2018, including without limitation, applicable provisions within Chapter Nine of said Manual as this contract is made pursuant to a federal award.

14.2 CONFLICT OF INTEREST

a. No member of the County's governing body, and no employee, officer, or agent of the County shall participate in the selection or in the award of administration of a subcontract supported by grant funds if a conflict of interest, real or apparent, would be involved. Such a conflict of interest would arise when: 1.) the employee, officer, or agent, 2.) any member of his or her immediate family, 3.) his or her partner, or 4.) any organization which employs, or is about to employ any of the above; has a financial or other interest in the firm or person selected to perform the subcontract.

b. In all cases not governed by Subsection (a) of this Section, no person specified in subsection (c) of this Section, who exercises any functions or responsibilities in connection with the planning and carrying out of the project, or who are in a position to participate in decision making process or gain inside information with regard to activities under this Agreement as Amended, may obtain a financial interest or benefit from the activity, or have an interest or benefit from the activity, or have any interest in any contract, subcontract, or agreement with respect thereto, or the proceeds thereunder, either for themselves or those with whom they have family or business ties during their tenure or for (1) year thereafter.

c. The conflict of interest provisions of Subsection (b) apply to any person who is an employee, agent, consultant, officer, elected official, or appointed official of the County or of the Contractor.

14.3 AUTHORITY TO BIND

Each Party represents and warrants for itself that the individual executing this Agreement on its behalf has the full power and authority to do so and to legally bind the Party to all the terms and provisions of this Agreement and that this Agreement constitutes the legal, valid, and binding agreement of each Party hereto.

14.4 IMMUNITY RETAINED

The County does not waive or relinquish any immunity or defense on behalf of itself, its trustees, officers, employees, and agents as a result of its execution of this Agreement and performance of the covenants contained herein. The County specifically reserves any claim it may have to sovereign, qualified, or official immunity as a defense to any action arising in conjunction with this Agreement.

14.5 NO THIRD-PARTY BENEFICIARY

This Agreement inures only to the benefit of Galveston County and Contractor. This Agreement does not create, is not intended to create, and shall not be deemed or construed to create, any rights or benefits in third parties.

14.6 SEVERABILITY

If a provision contained in this Agreement is held invalid for any reason by a court of competent jurisdiction, the invalidity shall not affect other provisions of the Agreement that may be given effect without the invalid provision, and to this end the provisions of this Agreement are severable.

14.7 VALIDITY/ENFORCABILITY

If any current or future legal limitations affect the validity or enforceability of a provision of this Agreement, then the legal limitations are made a part of this Agreement and shall operate to amend this Agreement to the minimum extent necessary to bring this Agreement into conformity with the requirements of the limitation, and as so modified, this Agreement shall continue in full force and effect.

This Agreement is hereby EXECUTED by the Parties to be effective upon full execution with the date of the Party signing last in time.

Exhibit A

Pricing proposal for Galveston County September 20, 2024

Home elevations – Scope

Preliminary Design Inspections- photos of all 4 sides, field verify measurements of the house based on survey, measure and sketch location of all windows and doors, plate heights, roof slopes, etc.

Design Drawings – perimeter wall layouts, elevations of all 4 sides (existing and proposed), 3D Renderings in accordance with the NFIP standards in 44 CFR Part 60 and to the latest published edition of ASCE 24 or its equivalent criteria. Compare to original architectural plans, if available.

Structural Layout Plans – layout-based field Inspections and draw original structural plans. Lay out, sub pile locations, grade beams, footings, chain wall, stair & landing locations, ac decks, garage tie in, etc. Lay out flood vent plan design.

Windstorm and Structural Engineering Design – make engineering changes based on structural layouts and design drawings. Calculate vents needed for air and flood. Stamp and issue 100% plans and specifications for construction bids.

Inspections and Confirmations –

1. 30%/Milestone 2 Inspection and invoice certification (Dig and Lift)
2. 60% Completion Inspection (Piers pushed and formed Grade Beams)
3. 90%/Milestone 3 – Completion Inspection invoice certification (house fully lifted and secured)
4. 100%/Milestone 4 – Completion Inspection and invoice certification (all construction and documents complete)

Letter – vent plan letter for City of Galveston for any/all houses within the Galveston City Limits.

As-Builts- structural plans will be reissued "as-built" based on inspections and plan changes during construction provided to construction contractor for permit closeout.

One contract with individual task orders will be issued per address.

AranFranklin.com
8419 Emmett F Lowry Expy
Texas City, TX 77591

Changes to scope after design drawings are approved will incur:

- CAD charges of $90/hr.
- Design at $90/hr.
- Structural at $125/hr.

LUMP SUM PRICING DESIGN:

- 1 story houses up to 5,500 SF under roof - $4,500.00
- Large 1 story and all 2 story houses - $5,750.00
- Higher elevations (structures above 6' require additional engineering) with larger spans add - $1,600.00

LUMP SUM PRICING INSPECTIONS AND WINDSTORM CERTIFICATION:

- All home sizes $2,500.00
- Additional letters $100 each unless inspections are required
- Failed inspections - contractor will have to pay a $400.00 reinspection fee as approved by Galveston County.

Geo-Technical Report* (Soils Report- includes up to (3) 25' borings)

- $3,800.00 / Lot

Surveying Pricing*: (Note: Topo pricing to be determined on a case-by-case basis based on lot size)

- Elevation Certificate: $400.00 each (need preliminary, mid lift and final)
- Topographical Survey: $+/- $850.00 - +/- $1,600.00
- Final Survey: $500.00 (showing elevated home and all access structures- as needed)

Use of existing elevation certificates and topographical surveys will be assessed on a case by case basis and pricing reduced accordingly if found to be acceptable for use on the project.

Ground Penetrating Radar* (slab scans- price varies based on home size)

- $2000.00 - $2750.00

RFQ (help design RFQ):

Assist in providing guidance for qualification of contractor pool.
Includes half day consultation on contractor qualification criteria and performance expectations and final review of RFQ specifications prior to issuance. $3500 (one time fee)

* Typical turnaround times for receipt of outsourced services are 3-4 weeks and weather dependent. We cannot finalize our plans without this information so this will affect the overall deliverable timeframes.

SECTION A - PROPERTY OWNER INFORMATION

For Insurance Company Use:

BUILDING OWNER'S NAME — Policy Number

BUILDING STREET ADDRESS (Including Apt., Unit, Suite, and/or Bldg. No.) OR P.O. ROUTE AND BOX NO. — Company NAIC Number

CITY — STATE — ZIP CODE

PROPERTY DESCRIPTION (Lot and Block Numbers, Tax Parcel Number, Legal Description, etc.)

BUILDING USE (e.g., Residential, Non-residential, Addition, Accessory, etc. Use a Comments area, if necessary.)

LATITUDE/LONGITUDE (OPTIONAL) (##° - ##' - ##.##" or ##.#####°) — HORIZONTAL DATUM: |__| NAD 1927 |__| NAD 1983 — SOURCE: |__| GPS (Type):_____ |__| USGS Quad Map |__| Other:_____

SECTION B - FLOOD INSURANCE RATE MAP (FIRM) INFORMATION

B1. NFIP COMMUNITY NAME & COMMUNITY NUMBER	B2. COUNTY NAME	B3. STATE

B4. MAP AND PANEL NUMBER	B5. SUFFIX	B6. FIRM INDEX DATE	B7. FIRM PANEL EFFECTIVE/REVISED DATE	B8. FLOOD ZONE(S)	B9. BASE FLOOD ELEVATION(S) (Zone AO, use depth of flooding)

B10. Indicate the source of the Base Flood Elevation (BFE) data or base flood depth entered in B9.
|__| FIS Profile |__| FIRM |__| Community Determined |__| Other (Describe): _____

B11. Indicate the elevation datum used for the BFE in B9: |__| NGVD 1929 |__| NAVD 1988 |__| Other (Describe): _____

B12. Is the building located in a Coastal Barrier Resources System (CBRS) area or Otherwise Protected Area (OPA)? |__| Yes |__| No
Designation Date:_____

SECTION C - BUILDING ELEVATION INFORMATION (SURVEY REQUIRED)

C1. Building elevations are based on: |__|Construction Drawings* |__|Building Under Construction* |__|Finished Construction
*A new Elevation Certificate will be required when construction of the building is complete.

C2. Building Diagram Number _____ (Select the building diagram most similar to the building for which this certificate is being completed - see pages 6 and 7. If no diagram accurately represents the building, provide a sketch or photograph.)

C3. Elevations – Zones A1-A30, AE, AH, A (with BFE), VE, V1-V30, V (with BFE), AR, AR/A, AR/AE, AR/A1-A30, AR/AH, AR/AO
Complete Items C3.a-i below according to the building diagram specified in Item C2. State the datum used. If the datum is different from the datum used for the BFE in Section B, convert the datum to that used for the BFE. Show field measurements and datum conversion calculation. Use the space provided or the Comments area of Section D or Section G, as appropriate, to document the datum conversion.
Datum _____ Conversion/Comments _____
Elevation reference mark used_____ Does the elevation reference mark used appear on the FIRM? |__| Yes |__| No

- ❑ a) Top of bottom floor (including basement or enclosure) _____ . ___ ft.(m)
- ❑ b) Top of next higher floor _____ . ___ ft.(m)
- ❑ c) Bottom of lowest horizontal structural member (V zones only) _____ . ___ ft.(m)
- ❑ d) Attached garage (top of slab) _____ . ___ ft.(m)
- ❑ e) Lowest elevation of machinery and/or equipment servicing the building (Describe in a Comments area.) _____ . ___ ft.(m)
- ❑ f) Lowest adjacent (finished) grade (LAG) _____ . ___ ft.(m)
- ❑ g) Highest adjacent (finished) grade (HAG) _____ . ___ ft.(m)
- ❑ h) No. of permanent openings (flood vents) within 1 ft. above adjacent grade _____
- ❑ i) Total area of all permanent openings (flood vents) in C3.h _____ sq. in. (sq. cm)

License Number, Embossed Seal, Signature, and Date

SECTION D - SURVEYOR, ENGINEER, OR ARCHITECT CERTIFICATION

This certification is to be signed and sealed by a land surveyor, engineer, or architect authorized by law to certify elevation information.
I certify that the information in Sections A, B, and C on this certificate represents my best efforts to interpret the data available.
I understand that any false statement may be punishable by fine or imprisonment under 18 U.S. Code, Section 1001.

CERTIFIER'S NAME — LICENSE NUMBER

TITLE — COMPANY NAME

ADDRESS — CITY — STATE — ZIP CODE

SIGNATURE — DATE — TELEPHONE

IMPORTANT: In these spaces, copy the corresponding information from Section A.	For Insurance Company Use:
BUILDING STREET ADDRESS (Including Apt., Unit, Suite, and/or Bldg. No.) OR P.O. ROUTE AND BOX NO.	Policy Number
CITY STATE ZIP CODE	Company NAIC Number

SECTION D - SURVEYOR, ENGINEER, OR ARCHITECT CERTIFICATION (CONTINUED)

Copy both sides of this Elevation Certificate for (1) community official, (2) insurance agent/company, and (3) building owner.

EXHIBIT F
EXAMPLE MITIGATION OFFER/DECLINATION NOTICE

Texas Division of Emergency Management (TDEM)
Hazard Mitigation Grant Program (HMGP)
Final MITIGATION OFFER

S A M P L E

State Grantee: **Texas Division of Emergency Management**

Subgrantee: **Galveston County, Texas**

PROPERTY OWNER(s);
>>>>>

>>>>>

>>>>>

>>>>>

PROPERTY: >>>>>

NFIP Policy Number: >>>>> **Repetitive Loss Number:** >>>>>

This form documents the formal MITIGATION OFFER for the HMGP Program.

1. A mitigation grant has been awarded to Galveston County under the Hazard Mitigation Grant Program (HMGP) from the Texas Division of Emergency Management (TDEM) for the elevation of properties within the Galveston County limits.

2. The HMGP grant program is a voluntary program.

3. All information related to you and/or your individual property that is collected during the consultation and offer processes shall be protected at a level consistent with the Federal Privacy Act and similar State and local laws and ordinances.

4. The estimated amounts for elevation of the PROPERTY in the grant application are now finalized in this MITIGATION OFFER.

The MITIGATION Offer is provided to you for the elevation of the above-referenced PROPERTY.

MITIGATION OFFER	**$ >>>>>**

Your final MITIGATION OFFER amount is based on the following amounts:

Eligible Engineering Costs	$ >>>>>
Eligible Elevation Construction Costs	$ >>>>>
Subtotal	$ >>>>>
Deductions (ICC, Flood Insurance, SB7, other Duplicated Benefits)	$ >>>>>
MITIGATION OFFER	$ >>>>>
REQUIRED MATCH FROM PROPERTY OWNER	$ >>>>>
GRANT FUNDED AMOUNT	$ >>>>>

Any ineligible cost featured in an extra work agreement with the ENGINEER or ELEVATION CONSTRUCTION CONTRACTOR must be pre-approved in writing by the COUNTY and will be considered to be a cost to be borne solely by the PROPERTY OWNER under a separate contract and are not part of this MITIGATION OFFER.

TEMPORARY LIVING EXPENSES that exceed the daily maximum allowable cost or the total maximum costs will also be considered a cost to be borne solely by the PROPERTY OWNER.

The PROPERTY OWNER is accountable for maintenance and insurance requirements for the PORPERTY during and after the mitigation project implementation (i.e., maintaining NFIP insurance on the PROPERTY for the life of the Property).

The PROPERTY OWNERs additional responsibilities may include securing a contractor, receiving funds in a back account for the TEMPORARY LIVING EXPENSES, keeping receipts for the project in accordance with grant and AGREEMENT requirements, and other programmatic requirements as specified by the COUNTY.

PROPERTY OWNER must sign and file the attached MODEL ACKNOWLEDGEMENT OF CONDITIONS FOR MITIGATION OF PROPERTY IN A SPECIAL FLOOD HAZARD AREA.

All holders of recorded interest in the property have been notified of the MITIGATION OFFER. The holders of recorded interest are:

Hazard Mitigation Grant Program (HMGP) – DR4332-25/239
Galveston County, Texas

Homeowner Name(s): _____
Project Address: _____
HMGP Project Number: _____
Project #: _____
Date: _____

Statement of Non-Participation

I/We, the undersigned, acknowledge that we were offered the opportunity to participate in the FEMA Hazard Mitigation Grant Program (HMGP) for the elevation of our home located at _____. After receiving information regarding the program's requirements, scope, and potential benefits, I/we have decided **not to move forward** with the elevation project at this time.

I/We understand that:

- By declining participation, no further HMGP elevation work will be performed at the property.
- This decision is **voluntary** and made without coercion or pressure from the County, its representatives, or GrantWorks, Inc.
- I/We may not be eligible for re-enrollment under this funding cycle, and future program participation (if any) will be subject to FEMA and County policy and funding availability.

Reason for Withdrawal (Optional):

☐ Financial concerns
☐ Personal/family circumstances
☐ Structural or site concerns
☐ Timeline/delays
☐ Other: _____

Homeowner Signature(s):

_____ Date: _____

_____ Date: _____

County Representative Name & Title:

_____

Signature: _____ Date: _____

_____

For Official Use Only:

☐ Project removed from elevation roster
☐ Notified Engineering/Construction team
☐ Withdrawal documented in project file
☐ FEMA/TDEM notified

EXHIBIT G
GRANT/TDEM-SPECIFIC CLAUSES

1. **Federal and State Funding Disclaimer:** This project is funded by the FEMA Hazard Mitigation Grant Program (HMGP), administered by the Texas Division of Emergency Management (TDEM), and is contingent on continued eligibility under the terms and conditions of DR-4332.

2. **Non-Duplication of Benefits (DOB) Clause:** The Homeowner certifies that they have not and will not receive funding from any other source (e.g., ICC, SBA, insurance, legal settlement) for the same purpose. Any funds received that duplicate FEMA assistance must be reported and may be subject to recapture.

3. **FEMA Model Deed Restriction Acknowledgment** (Attachment): The Homeowner acknowledges receipt of and agrees to execute the required Acknowledgment of Conditions for Mitigation, including the requirement to maintain flood insurance in perpetuity.

4. **Flood Insurance Requirement (NFIP)**: The Homeowner agrees to maintain flood insurance on the property in accordance with 44 CFR § 206.252 and the NFIP, for the life of the property, regardless of transfer of ownership

5. **Construction & Reimbursement Contingency Clause:** All work must be within the approved scope of work as authorized by FEMA and TDEM. Any unauthorized work may result in non-reimbursement and possible removal from the program.

6. **Procurement & Conflict of Interest Compliance:** The parties acknowledge that the Contractor/Engineer was procured in accordance with 2 CFR §§ 200.318–200.326 and applicable state procurement laws. The Contractor affirms that no conflict of interest exists.

7. **Compliance with 2 CFR 200 and HMA Guidance:** The parties agree to comply with all applicable provisions of 2 CFR Part 200, FEMA Hazard Mitigation Assistance (HMA) Program Guidance, and TDEM's implementation requirements for HMGP DR-4332.

Re: Project review under Section 106 of the National Historic Preservation Act of 1966, Review of Elevation/ Reconstruction of 50 Residences, Hazard Mitigation Grant Program, Galveston County, Texas (FEMA)

Dear Mr. Gentile,

Thank you for your correspondence, submitted via eTRAC on June 29, 2018, regarding the above-referenced projects. This letter serves as comment on the proposed undertakings from the State Historic Preservation Officer (SHPO), the Executive Director of the Texas Historical Commission.

The review staff, led by Kelly Little, has completed its review of the material submitted. It is our understanding that Galveston County proposes to elevate or reconstruct 200 residences through the county; at present, 50 properties have been submitted for SHPO review. SHPO was provided with photographs of each of the 50 buildings, a spreadsheet with addresses and construction dates, and a map.

Based on the information submitted and application of federal criteria for historical designation, staff has determined that the following buildings are **not eligible** for listing in the National Register of Historic Places. Undertakings at these properties will have **no effect on historic resources** and no further consultation is necessary with our agency under Section 106 of the National Historic Preservation Act:

1 Highland Drive, Hitchcock , TX 77563
10402 Jay Road, Hitchcock , TX 77563
1209 Esther Street, Kemah, TX 77565
1209 Shady Oak Lane, Dickinson, TX 77539
1211 Esther Street, Kemah, TX 77565
1212 Esther Street, Kemah, TX 77565
1215 Esther Street, Kemah, TX 77565
1216 Esther Street, Kemah, TX 77565
1317 Sunset Drive, Dickinson, TX 77539
16 Perthuis Farms Road, La Marque, TX 77568
202 Merry Way, Alvin, TX 77511
209 Old Bayou Drive, Dickinson, TX 77539
2101 Wimcrest Street, Galveston, TX 77551
2118 Cove Park Drive, League City, TX 77573
2124 59th Street, Galveston, TX 77551
2127 E Winn Street, League City, TX 77565
214 12th Street, San Leon, TX 77539
2150 Cove Park Drive, Kemah, TX 77565
2154 Cove Park Drive, League City, TX 77573
21914 Matagorda Drive, Galveston, TX 77554

23 Edgewater Drive, Hitchcock , TX 77563
2429 Avenue D , San Leon, TX 77539
2809 Avenue H , Dickinson, TX 77539
2817 Belmont Street, Dickinson, TX 77539
2819 Frostwood Circle, Dickinson, TX 77539
2922 Colonial Drive, Dickinson, TX 77539
2924 Colonial Drive, Dickinson, TX 77539
30 Lakeside Drive, Hitchcock , TX 77563
3122 Avenue H , Dickinson, TX 77539
3318 Maple Drive, Dickinson, TX 77539
3526 Elm Drive, Dickinson, TX 77539
3722 Bayou Circle, Dickinson, TX 77539
3919 Liggio Street, Dickinson, TX 77539
3951 Wagon Road, Dickinson, TX 77539
4210 Country Club Drive, Dickinson, TX 77539
4302 Edward Street, Texas City, TX 77591
4402 Edward Street, Texas City, TX 77591
4517 Bayou Bend, Drive, Dickinson, TX 77539
4524 Bayou Bend Drive, Dickinson, TX 77539
4607 East 28th Street, Dickinson, TX 77539
4927 Alamo Drive, Galveston, TX 77551
506 E. Shore Drive, Clear Lake Shores, TX 77565
518 Lakeside Drive, League City, TX 77565
618 Bel Road, Kemah, TX 77565
6810 Wayside Drive, Hitchcock , TX 77563
717 Narcissus Road, Clear Lake Shores, TX 77565
7621 2nd Street, Hitchcock , TX 77563
8001 Meadowbrook Drive, Hitchcock , TX 77563
920 4th Street, League City, TX 77573

4409 Avenue K is located within an area that is **eligible** for listing in the National Register of Historic Places as a historic district. Despite the noted construction date of 1975, this house appears to be of older construction and would be a contributing resource to the district. SHPO will need additional information to determine the effect of the undertaking on the historic building; please provide more specific information on what will take place at this property so that we may complete our review. Demolition would be considered an adverse effect and would require further consultation to resolve. Elevation would likely be found to have no adverse effect provided it is accomplished in a way that does not damage the integrity of the historic house.

Thank you for your participation in this federal review process, and for your efforts to preserve the irreplaceable heritage of Texas. If you have any questions concerning this review or if we can be of further assistance, please contact Kelly Little at kelly.little@thc.texas.gov or 202-717-7419.

Sincerely,

Kelly Little, Historian
For: Mark Wolfe, State Historic Preservation Officer

Base Flood Elevation at the site is _____ feet (NGVD).
Map Panel Number _____, effective date _____

As a recipient of Federally-funded hazard mitigation assistance under the Hazard Mitigation Grant Program, as authorized by 42 U.S.C. §5170c / Pre-Disaster Mitigation Program, as authorized by 42 U.S.C. §5133 / Flood Mitigation Assistance Program, as authorized by 42 U.S.C. §4104c / Severe Repetitive Loss, as authorized by 42 U.S.C. §4102a, the Property Owner accepts the following conditions:

1. That the Property Owner has insured all structures that will **not** be demolished or relocated out of the SFHA for the above-mentioned property to an amount at least equal to the project cost or to the maximum limit of coverage made available with respect to the particular property, whichever is less, through the National Flood Insurance Program (NFIP), as authorized by 42 U.S.C. §4001 *et seq.*, as long as the Property Owner holds title to the property as required by 42 U.S.C. §4012a.

2. That the Property Owner will maintain all structures on the above-mentioned property in accordance with the flood plain management criteria set forth in Title 44 of the Code of Federal Regulations (CFR) Part 60.3 and City/County Ordinance as long as the Property Owner holds title to the property. These criteria include, but are not limited to, the following measures:

    i. Enclosed areas below the Base Flood Elevation will only be used for parking of vehicles, limited storage, or access to the building;
    ii. All interior walls and floors below the Base Flood Elevation will be unfinished or constructed of flood resistant materials;
    iii. No mechanical, electrical, or plumbing devices will be installed below the Base Flood Elevation; and
    iv. All enclosed areas below Base Flood Elevation must be equipped with vents permitting the automatic entry and exit of flood water.

    For a complete, detailed list of these criteria, see City/County Ordinance attached to this document.

3. The above conditions are binding for the life of the property. To provide notice to subsequent purchasers of these conditions, the Property Owner agrees that the City/County will legally record with the county or appropriate jurisdiction's land

records a notice that includes the name of the current property owner (including book/page reference to record of current title, if readily available), a legal description of the property, and the following notice of flood insurance requirements:

> "This property has received Federal hazard mitigation assistance. Federal law requires that flood insurance coverage on this property must be maintained during the life of the property regardless of transfer of ownership of such property. Pursuant to 42 U.S.C. §5154a, failure to maintain flood insurance on this property may prohibit the owner from receiving Federal disaster assistance with respect to this property in the event of a flood disaster. The Property Owner is also required to maintain this property in accordance with the flood plain management criteria of Title 44 of the Code of Federal Regulations Part 60.3 and City/County Ordinance."

4. Failure to abide by the above conditions may prohibit the Property Owner and/or any subsequent purchasers from receiving Federal disaster assistance with respect to this property in the event of any future flood disasters. If the above conditions are not met, FEMA may recoup the amount of the grant award with respect to the subject property, and the Property Owner may be liable to repay such amounts.

This Agreement shall be binding upon the respective parties' heirs, successors, personal representatives, and assignees.

MEMORANDUM

To: Galveston County Commissioners' Court

From: Betsy Thomas, Grant Writer

Court Date: November 10, 2025

RE: Parks & Cultural Services – Senior Services
FY 2026 HGAC Area Agency on Aging Senior Meal Grant
Data Use Agreement

BACKGROUND

In 1976 Galveston County established the Senior Citizens Program to serve adults aged 60 and older. This program has been under Parks and Cultural Services since 2003. The Senior Program staff consists of highly qualified employees who provide congregate meals, transportation services, information and referral, education, fitness, and recreation at the centers. This program is supported by federal and state funds via the Older Americans Act, Title III programs, which are administered by the Texas Health and Human Services Commission and passed-through the Houston-Galveston Area Council (HGAC).
Galveston County Senior Centers directly affected by this application are located at the following locations:

- Wayne Johnson Community Center in La Marque
- Bayside Regional Community Center
- Dickinson Community Center
- City of Friendswood – Friendswood Senior Center
- City of League City – Hometown Heroes Park – Senior Program
- City of Texas City – Nessler Center Seniors Program

NOTE: The County also supports the congregate meal program at the Santa Fe Senior Center as well as the Bay Area Meals on Wheels and the Interfaith Ministries for Greater Houston home-delivered meal programs.

SUMMARY

The attached Data Use Agreement is a requirement for the FY 2026 grant award contract. Once it is reviewed and signed, it will be provided to HGAC to become a part of the FY 2026 agreement.

FINANCIAL SUMMARY

Grant Application	$588,355.00
County Discretionary Match	$8,017.00
County Mandatory Match	$60,000.00
	$656,37200

County Match is met through Parks and Cultural Services Mandatory Match as well as a portion of the salary and benefits for the Senior Citizens Department personnel.

RECOMMENDATIONS

Grants Administration requests the Court consider authorization for the County Judge to sign the FY 2026 Data Use Agreement for the HGAC Area Agency on Aging Senior Meals grant.

ATTACHEMENTS FOR WET SIGNATURE

- ☐ Data Usage Agreement

ATTACHMENT "A"

DATA USE AGREEMENT
BETWEEN THE
TEXAS HEALTH AND HUMAN SERVICES ENTERPRISE
AND
HOUSTON-GALVESTON AREA COUNCIL

This Data Use Agreement ("DUA") entered into by and between the Texas Health and Human Services Enterprise ("HHS") agency, the Department of Aging and Disability Services (DADS) and Houston-Galveston Area Council ("CONTRACTOR"), and incorporated into the terms of DADS Contract No.539-11-0024-00001, in Travis County, Texas (the "Base Contract").

ARTICLE 1. PURPOSE; APPLICABILITY; ORDER OF PRECEDENCE

ATTACHMENT 1. THE PURPOSE OF THIS DUA IS TO FACILITATE CREATION, RECEIPT, MAINTENANCE, USE, DISCLOSURE OR ACCESS TO CONFIDENTIAL INFORMATION WITH CONTRACTOR, AND DESCRIBE CONTRACTOR'S RIGHTS AND OBLIGATIONS WITH RESPECT TO THE CONFIDENTIAL INFORMATION AND THE LIMITED PURPOSES FOR WHICH THE CONTRACTOR MAY CREATE, RECEIVE, MAINTAIN, USE, DISCLOSE OR HAVE ACCESS TO CONFIDENTIAL INFORMATION. ***45 CFR 164.504(E)(1)-(3)*** **THIS DUA ALSO DESCRIBES HHS'S REMEDIES IN THE EVENT OF CONTRACTOR'S NONCOMPLIANCE WITH ITS OBLIGATIONS UNDER THIS DUA. THIS DUA APPLIES TO BOTH BUSINESS ASSOCIATES AND CONTRACTORS WHO ARE NOT BUSINESS ASSOCIATES WHO CREATE, RECEIVE, MAINTAIN, USE, DISCLOSE OR HAVE ACCESS TO CONFIDENTIAL INFORMATION ON BEHALF OF HHS, ITS PROGRAMS OR CLIENTS AS DESCRIBED IN THE BASE CONTRACT.**

As of the Effective Date of this DUA, if any provision of the Base Contract, including any General Provisions or Standard Contract Terms and Conditions, conflicts with this DUA, this DUA controls.

ARTICLE 2. DEFINITIONS

For the purposes of this DUA, **capitalized, underlined terms have the meanings set forth in the following:** Health Insurance Portability and Accountability Act of 1996, Public Law 104-191 (42 U.S.C. §1320d, *et seq.*) and regulations there under in 45 CFR Parts 160 and 164, including all amendments, regulations and guidance issued thereafter; The Social Security Act, including Section 1137 (42 U.S.C. §§ 1320b-7), Title XVI of the Act; The Privacy Act of 1974, as amended by the Computer Matching and Privacy Protection Act of 1988, 5 U.S.C. § 552a and regulations and guidance there under; Internal Revenue Code, Title 26 of the United States Code and regulations and publications adopted under that code, including IRS Publication 1075; OMB Memorandum 07-18; Texas Business and Commerce Code Ch. 521; Texas Government Code, Ch. 552, and Texas Government Code §2054.1125. In addition, the following terms in this DUA are defined as follows:

"Authorized Purpose" means the specific purpose or purposes described in the Scope of Work of the Base Contract for CONTRACTOR to fulfill its obligations under the Base Contract, or any other purpose expressly authorized by HHS in writing in advance.

"Authorized User" means a Person:

(1) Who is authorized to create, receive, maintain, have access to, process, view, handle, examine, interpret, or analyze Confidential Information pursuant to this DUA;

(2) For whom CONTRACTOR warrants and represents has a demonstrable need to create, receive, maintain, use, disclose or have access to the Confidential Information; and

(3) Who has agreed in writing to be bound by the disclosure and use limitations pertaining to the Confidential Information as required by this DUA.

"Confidential Information" means any communication or record (whether oral, written, electronically stored or transmitted, or in any other form) provided to or made available to CONTRACTOR or that CONTRACTOR may create, receive, maintain, use, disclose or have access to on behalf of HHS that consists of or includes any or all of the following:

(1) Client Information;

(2) Protected Health Information in any form including without limitation, Electronic Protected Health Information or Unsecured Protected Health Information;

(3) Sensitive Personal Information defined by Texas Business and Commerce Code Ch. 521;

(4) Federal Tax Information;

(5) Personally Identifiable Information;

(6) Social Security Administration Data, including, without limitation, Medicaid information;

(7) All privileged work product;

(8) All information designated as confidential under the constitution and laws of the State of Texas and of the United States, including the Texas Health & Safety Code and the Texas Public Information Act, Texas Government Code, Chapter 552.

"Legally Authorized Representative" of the Individual, as defined by Texas law, including as provided in 45 CFR 435.923 (Medicaid); 45 CFR 164.502(g)(1) (HIPAA); Tex. Occ. Code § 151.002(6); Tex. H. & S. Code §166.164; Estates Code Ch. 752 and Texas Prob. Code § 3.

ARTICLE 3. CONTRACTOR'S DUTIES REGARDING CONFIDENTIAL INFORMATION

Section 3.01 *Obligations of CONTRACTOR*

CONTRACTOR agrees that:

(A) CONTRACTOR will exercise reasonable care and no less than the same degree of care CONTRACTOR uses to protect its own confidential, proprietary and trade secret information to prevent any portion of the Confidential Information from being used in a manner that is not expressly an Authorized Purpose under this DUA or as Required by Law. ***45 CFR 164.502(b)(1); 45 CFR 164.514(d)***

(B) CONTRACTOR will not, without HHS's prior written consent, disclose or allow access to any portion of the Confidential Information to any Person or other entity, other than Authorized User's Workforce or Subcontractors of CONTRACTOR who have completed training in confidentiality, privacy, security and the importance of promptly reporting any Event or Breach to CONTRACTOR's management, to carry out the Authorized Purpose or as Required by Law.

HHS, at its election, may assist CONTRACTOR in training and education on specific or unique HHS processes, systems and/or requirements. CONTRACTOR will produce evidence of completed training to HHS upon request. ***45 C.F.R. 164.308(a)(5)(i); Texas Health & Safety Code §181.101***

(C) CONTRACTOR will establish, implement and maintain appropriate sanctions against any member of its Workforce or Subcontractor who fails to comply with this DUA, the Base Contract or

applicable law. CONTRACTOR will maintain evidence of sanctions and produce it to HHS upon request.***45 C.F.R. 164.308(a)(1)(ii)(C); 164.530(e); 164.410(b); 164.530(b)(1)***

(D) CONTRACTOR will not, without prior written approval of HHS, disclose or provide access to any Confidential Information on the basis that such act is Required by Law without notifying HHS so that HHS may have the opportunity to object to the disclosure or access and seek appropriate relief. If HHS objects to such disclosure or access, CONTRACTOR will refrain from disclosing or providing access to the Confidential Information until HHS has exhausted all alternatives for relief. ***45 CFR 164.504(e)(2)(ii)(A)***

(E) CONTRACTOR will not attempt to re-identify or further identify Confidential Information or De-identified Information, or attempt to contact any Individuals whose records are contained in the Confidential Information, except for an Authorized Purpose, without express written authorization from HHS or as expressly permitted by the Base Contract. ***45 CFR 164.502(d)(2)(i) and (ii)*** CONTRACTOR will not engage in prohibited marketing or sale of Confidential Information. ***45 CFR 164.501, 164.508(a)(3) and (4); Texas Health & Safety Code Ch. 181.002***

(F) CONTRACTOR will not permit, or enter into any agreement with a Subcontractor to, create, receive, maintain, use, disclose, have access to or transmit Confidential Information, on behalf of CONTRACTOR without requiring that Subcontractor first execute the Form Subcontractor Agreement,

Attachment 1, which ensures that the Subcontractor will comply with the identical terms, conditions, safeguards and restrictions as contained in this DUA for PHI and any other relevant Confidential Information and which permits more strict limitations; and ***45 CFR 164.502(e)(1)(1)(ii); 164.504(e)(1)(i) and (2)***

(G) CONTRACTOR is directly responsible for compliance with, and enforcement of, all conditions for creation, maintenance, use, disclosure, transmission and Destruction of Confidential Information and the acts or omissions of Subcontractors as may be reasonably necessary to prevent unauthorized use. ***45 CFR 164.504(e)(5); 42 CFR 431.300, et seq.***

(H) If CONTRACTOR maintains PHI in a Designated Record Set, CONTRACTOR will make PHI available to HHS in a Designated Record Set or, as directed by HHS, provide PHI to the Individual, or Legally Authorized Representative of the Individual who is requesting PHI in compliance with the requirements of the HIPAA Privacy Regulations. CONTRACTOR will make other Confidential Information in CONTRACTOR's possession available pursuant to the requirements of HIPAA or other applicable law upon a determination of a Breach of Unsecured PHI as defined in HIPAA. ***45 CFR 164.524and 164.504(e)(2)(ii)(E)***

(I) CONTRACTOR will make PHI as required by HIPAA available to HHS for amendment and incorporate any amendments to this information that HHS directs or agrees to pursuant to the HIPAA. ***45 CFR 164.504(e)(2)(ii)(E) and (F)***

(J) CONTRACTOR will document and make available to HHS the PHI required to provide access, an accounting of disclosures or amendment in compliance with the requirements of the HIPAA Privacy Regulations. ***45 CFR 164.504(e)(2)(ii)(G) and 164.528***

(K) If CONTRACTOR receives a request for access, amendment or accounting of PHI by any Individual subject to this DUA, it will promptly forward the request to HHS; however, if it would violate HIPAA to forward the request, CONTRACTOR will promptly notify HHS of the request and of CONTRACTOR's response. Unless CONTRACTOR is prohibited by law from forwarding a request, HHS will respond to all such requests, unless HHS has given prior written consent for CONTRACTOR to respond to and account for all such requests. ***45 CFR 164.504(e)(2)***

(L) CONTRACTOR will provide, and will cause its Subcontractors and agents to provide, to HHS periodic written certifications of compliance with controls and provisions relating to information

privacy, security and breach notification, including without limitation information related to data transfers and the handling and disposal of Confidential Information. ***45 CFR 164.308; 164.530(c); 1 TAC 202***

(M) Except as otherwise limited by this DUA, the Base Contract, or law applicable to the Confidential Information, CONTRACTOR may use or disclose PHI for the proper management and administration of CONTRACTOR or to carry out CONTRACTOR's legal responsibilities if: ***45 CFR 164.504(e)(ii)(1)(A)***

(1) Disclosure is Required by Law, provided that CONTRACTOR complies with Section 3.01(D);

(2) CONTRACTOR obtains reasonable assurances from the Person to whom the information is disclosed that the Person will:

(a) Maintain the confidentiality of the Confidential Information in accordance with this DUA;

(b) Use or further disclose the information only as Required by Law or for the Authorized Purpose for which it was disclosed to the Person; and

(c) Notify CONTRACTOR in accordance with Section 4.01 of any Event or Breach of Confidential Information of which the Person discovers or should have discovered with the exercise of reasonable diligence. ***45 CFR 164.504(e)(4)(ii)(B)***

(N) Except as otherwise limited by this DUA, CONTRACTOR will, if requested by HHS, use PHI to provide data aggregation services to HHS, as that term is defined in the HIPAA, 45 C.F.R. §164.501 and permitted by HIPAA. ***45 CFR 164.504(e)(2)(i)(B)***

(O) CONTRACTOR will, on the termination or expiration of this DUA or the Base Contract, at its expense, return to HHS or Destroy, at HHS's election, and to the extent reasonably feasible and permissible by law, all Confidential Information received from HHS or created or maintained by CONTRACTOR or any of CONTRACTOR's agents or Subcontractors on HHS's behalf if that data contains Confidential Information. CONTRACTOR will certify in writing to HHS that all the Confidential Information that has been created, received, maintained, used by or disclosed to CONTRACTOR, has been Destroyed or returned to HHS, and that CONTRACTOR and its agents and Subcontractors have retained no copies thereof. Notwithstanding the foregoing, CONTRACTOR acknowledges and agrees that it may not Destroy any Confidential Information if federal or state law, or HHS record retention policy or a litigation hold notice prohibits such Destruction. If such return or Destruction is not reasonably feasible, or is impermissible by law, CONTRACTOR will immediately notify HHS of the reasons such return or Destruction is not feasible, and agree to extend indefinitely the protections of this DUA to the Confidential Information and limit its further uses and disclosures to the purposes that make the return of the Confidential Information not feasible for as long as CONTRACTOR maintains such Confidential Information. ***45 CFR 164.504(e)(2)(ii)(J)***

(P) CONTRACTOR will create, maintain, use, disclose, transmit or Destroy Confidential Information in a secure fashion that protects against any reasonably anticipated threats or hazards to the security or integrity of such information or unauthorized uses. ***45 CFR 164.306; 164.530(c)***

(Q) If CONTRACTOR accesses, transmits, stores, and/or maintains Confidential Information, CONTRACTOR will complete and return to HHS at infosecurity@hhsc.state.tx.us the HHS information security and privacy initial inquiry (SPI) at Attachment 2. The SPI identifies basic privacy and security controls with which CONTRACTOR must comply to protect HHS Confidential Information. CONTRACTOR will comply with periodic security controls compliance assessment and monitoring by HHS as required by state and federal law, based on the type of Confidential Information

CONTRACTOR creates, receives, maintains, uses, discloses or has access to and the Authorized Purpose and level of risk. CONTRACTOR's security controls will be based on the National Institute of Standards and Technology (NIST) Special Publication 800-53. CONTRACTOR will update its security controls assessment

whenever there are significant changes in security controls for HHS Confidential Information and will provide the updated document to HHS. HHS also reserves the right to request updates as needed to satisfy state and federal monitoring requirements. ***45 CFR 164.306***

(R) CONTRACTOR will establish, implement and maintain any and all appropriate procedural, administrative, physical and technical safeguards to preserve and maintain the confidentiality, integrity, and availability of the Confidential Information, and with respect to PHI, as described in the HIPAA Privacy and Security Regulations, or other applicable laws or regulations relating to Confidential Information, to prevent any unauthorized use or disclosure of Confidential Information as long as CONTRACTOR has such Confidential Information in its actual or constructive possession. ***45 CFR 164.308 (administrative safeguards); 164.310 (physical safeguards); 164.312 (technical safeguards); 164.530(c) (privacy safeguards)***

(S) CONTRACTOR will designate and identify, subject to HHS approval, a Person or Persons, as Privacy Official ***45 CFR 164.530(a)(1)*** and Information Security Official, each of whom is authorized to act on behalf of CONTRACTOR and is responsible for the development and implementation of the privacy and security requirements in this DUA. CONTRACTOR will provide name and current address, phone number and e-mail address for such designated officials to HHS upon execution of this DUA and prior to any change. ***45 CFR 164.308(a)(2)***

(T) CONTRACTOR represents and warrants that its Authorized Users each have a demonstrated need to know and have access to Confidential Information solely to the minimum extent necessary to accomplish the Authorized Purpose pursuant to this DUA and the Base Contract, and further, that each has agreed in writing to be bound by the disclosure and use limitations pertaining to the Confidential Information contained in this DUA. ***45 CFR 164.502; 164.514(d)***

(U) CONTRACTOR and its Subcontractors will maintain an updated, complete, accurate and numbered list of Authorized Users, their signatures, titles and the date they agreed to be bound by the terms of this DUA, at all times and supply it to HHS, as directed, upon request.

(V) CONTRACTOR will implement, update as necessary, and document reasonable and appropriate policies and procedures for privacy, security and Breach of Confidential Information and an incident response plan for an Event or Breach, to comply with the privacy, security and breach notice requirements of this DUA prior to conducting work under the DUA. ***45 CFR 164.308; 164.316; 164.514(d); 164.530(i)(1)***

(W) CONTRACTOR will produce copies of its information security and privacy policies and procedures and records relating to the use or disclosure of Confidential Information received from, created by, or received, used or disclosed by CONTRACTOR on behalf of HHS for HHS's review and approval within 30 days of execution of this DUA and upon request by HHS the following business day or other agreed upon time frame. ***45 CFR 164.308; 164.514(d)***

(X) CONTRACTOR will make available to HHS any information HHS requires to fulfill HHS's obligations to provide access to, or copies of, PHI in accordance with HIPAA and other applicable laws and regulations relating to Confidential Information. CONTRACTOR will provide such information in a time and manner reasonably agreed upon or as designated by the Secretary, or other federal or state law. ***45 CFR 164.504(e)(2)(i)(I)***

(Y) CONTRACTOR will only conduct secure transmissions of Confidential Information whether in paper, oral or electronic form. A secure transmission of electronic Confidential Information *in motion* includes secure File Transfer Protocol (SFTP) or Encryption at an appropriate level or otherwise protected as required by rule, regulation or law. HHS Confidential Information *at rest* requires Encryption unless there is adequate administrative, technical, and physical security, or as otherwise protected as required by rule, regulation or law. All electronic data transfer and communications of Confidential Information will be through secure systems. Proof of system, media or device security and/or Encryption must be produced to HHS no later than 48 hours after HHS's written request in response to a compliance investigation, audit or the Discovery of an Event or Breach. Otherwise, requested production of such proof will be made as agreed upon by the parties. De-identification of HHS Confidential Information is a means of security. With respect to de-identification of PHI, "secure" means de-identified according to HIPAA Privacy standards and regulatory guidance. ***45 CFR 164.312; 164.530(d)***

(Z) CONTRACTOR will comply with the following laws and standards ***if applicable to the type of Confidential Information and Contractor's Authorized Purpose***:

Title 1, Part 10, Chapter 202, Subchapter B, Texas Administrative Code;

The Privacy Act of 1974;

OMB Memorandum 07-16;

The Federal Information Security Management Act of 2002 (FISMA);

The Health Insurance Portability and Accountability Act of 1996 (HIPAA) as defined in the DUA;

Internal Revenue Publication 1075 – Tax Information Security Guidelines for Federal, State and Local Agencies;

National Institute of Standards and Technology (NIST) Special Publication 800-66 Revision 1 – An Introductory Resource Guide for Implementing the Health Insurance Portability and Accountability Act (HIPAA) Security Rule;

NIST Special Publications 800-53 and 800-53A – Recommended Security Controls for Federal Information Systems and Organizations, as currently revised;

NIST Special Publication 800-47 – Security Guide for Interconnecting Information Technology Systems;

NIST Special Publication 800-88, Guidelines for Media Sanitization;

NIST Special Publication 800-111, Guide to Storage of Encryption Technologies for End User Devices containing PHI; and

Any other State or Federal law, regulation, or administrative rule relating to the specific HHS program area that CONTRACTOR supports on behalf of HHS.

ARTICLE 4. BREACH NOTICE, REPORTING AND CORRECTION REQUIREMENTS

Section 4.01. ***Breach or Event Notification to HHS. 45 CFR 164.400-414***

(A) CONTRACTOR will cooperate fully with HHS in investigating, mitigating to the extent practicable and issuing notifications directed by HHS, for any Event or Breach of Confidential Information to the extent and in the manner determined by HHS.

(B) CONTRACTOR'S obligation begins at the Discovery of an Event or Breach and continues as long as related activity continues, until all effects of the Event are mitigated to HHS's satisfaction (the "incident response period"). ***45 CFR 164.404***

(C) Breach Notice:

1. Initial Notice.

a. For federal information, including without limitation, Federal Tax Information, Social Security Administration Data, and Medicaid Client Information, within the first, consecutive clock hour

of Discovery, and for all other types of Confidential Information not more than 24 hours after Discovery, ***or in a timeframe otherwise approved by HHS in writing***, initially report to HHS's Privacy and Security Officers via email at: privacy@HHSC.state.tx.us and to the HHS division responsible for this DUA; and ***IRS Publication 1075; Privacy Act of 1974, as amended by the Computer Matching and Privacy Protection Act of 1988, 5 U.S.C. § 552a; OMB Memorandum 07-16 as cited in HHSC-CMS Contracts for information exchange.***

b. Report all information reasonably available to CONTRACTOR about the Event or Breach of the privacy or security of Confidential Information. ***45 CFR 164.410***

c. Name, and provide contact information to HHS for, CONTRACTOR's single point of contact who will communicate with HHS both on and off business hours during the incident response period.

2. 48-Hour Formal Notice. No later than 48 consecutive clock hours after Discovery, or a time within which Discovery reasonably should have been made by CONTRACTOR of an Event or Breach of Confidential Information, **provide** formal notification to the State, including all reasonably available information about the Event or Breach, and CONTRACTOR's investigation, including without limitation and to the extent available*: **For (a) - (m) below: 45 CFR 164.400-414***

a. The date the Event or Breach occurred;

b. The date of CONTRACTOR's and, if applicable, Subcontractor's Discovery;

c. A brief description of the Event or Breach; including how it occurred and who is responsible (or hypotheses, if not yet determined);

d. A brief description of CONTRACTOR's investigation and the status of the investigation;

e. A description of the types and amount of Confidential Information involved;

f. Identification of and number of all Individuals reasonably believed to be affected, including first and last name of the individual and if applicable the, Legally authorized representative, last known address, age, telephone number, and email address if it is a preferred contact method, to the extent known or can be reasonably determined by CONTRACTOR at that time;

g. CONTRACTOR's initial risk assessment of the Event or Breach demonstrating whether individual or other notices are required by applicable law or this DUA for HHS approval, including an analysis of whether there is a low probability of compromise of the Confidential Information or whether any legal exceptions to notification apply;

h. CONTRACTOR's recommendation for HHS's approval as to the steps Individuals and/or CONTRACTOR on behalf of Individuals, should take to protect the Individuals from potential harm, including without limitation CONTRACTOR's provision of notifications, credit protection, claims monitoring, and any specific protections for a Legally Authorized Representative to take on behalf of an Individual with special capacity or circumstances;

i. The steps CONTRACTOR has taken to mitigate the harm or potential harm caused (including without limitation the provision of sufficient resources to mitigate);

j. The steps CONTRACTOR has taken, or will take, to prevent or reduce the likelihood of recurrence of a similar Event or Breach;

k. Identify, describe or estimate of the Persons, Workforce, Subcontractor, or Individuals and any law enforcement that may be involved in the Event or Breach;

l. A reasonable schedule for CONTRACTOR to provide regular updates to the foregoing in the future for response to the Event or Breach, but no less than every three (3) business days or as

otherwise directed by HHS, including information about risk estimations, reporting, notification, if any, mitigation, corrective action, root cause analysis and when such activities are expected to be completed; and

m. Any reasonably available, pertinent information, documents or reports related to an Event or Breach that HHS requests following Discovery.

Section 4.02 ***Investigation, Response and Mitigation. For A-F below: 45 CFR 164.308, 310 and 312; 164.530***

(A) CONTRACTOR will immediately conduct a full and complete investigation, respond to the Event or Breach, commit necessary and appropriate staff and resources to expeditiously respond, and report as required to and by HHS for incident response purposes and for purposes of HHS's compliance with report and notification requirements, to the satisfaction of HHS.

(B) CONTRACTOR will complete or participate in a risk assessment as directed by HHS following an Event or Breach, and provide the final assessment, corrective actions and mitigations to HHS for review and approval.

(C) CONTRACTOR will fully cooperate with HHS to respond to inquiries and/or proceedings by state and federal authorities, Persons and/or Individuals about the Event or Breach.

(D) CONTRACTOR will fully cooperate with HHS's efforts to seek appropriate injunctive relief or otherwise prevent or curtail such Event or Breach, or to recover or protect any Confidential Information, including complying with reasonable corrective action or measures, as specified by HHS in a Corrective Action Plan if directed by HHS under the Base Contract.

Section 4.03 ***Breach Notification to Individuals and Reporting to Authorities. Tex. Bus. & Comm. Code §521.053; 45 CFR 164.404 (Individuals), 164.406 (Media); 164.408 (Authorities)***

(A) HHS may direct CONTRACTOR to provide Breach notification to Individuals, regulators or third-parties, as specified by HHS following a Breach.

(B) CONTRACTOR must obtain HHS's prior written approval of the time, manner and content of any notification to Individuals, regulators or third-parties, or any notice required by other state or federal authorities. Notice letters will be in CONTRACTOR's name and on CONTRACTOR's letterhead, unless otherwise directed by HHS, and will contain contact information, including the name

and title of CONTRACTOR's representative, an email address and a toll-free telephone number, for the Individual to obtain additional information.

(C) CONTRACTOR will provide HHS with copies of distributed and approved communications.

(D) CONTRACTOR will have the burden of demonstrating to the satisfaction of HHS that any notification required by HHS was timely made. If there are delays outside of CONTRACTOR's control, CONTRACTOR will provide written documentation of the reasons for the delay.

(E) If HHS delegates notice requirements to CONTRACTOR, HHS shall, in the time and manner reasonably requested by CONTRACTOR, cooperate and assist with CONTRACTOR's information requests in order to make such notifications and reports.

ARTICLE 5. SCOPE OF WORK

Scope of Work means the services and deliverables to be performed or provided by CONTRACTOR, or on behalf of CONTRACTOR by its Subcontractors or agents for HHS that are described in detail in the Base Contract. The Scope of Work, including any future amendments thereto, is incorporated by reference in this DUA as if set out word-for-word herein.

ARTICLE 6. GENERAL PROVISIONS

Section 6.01 *Ownership of Confidential Information*

CONTRACTOR acknowledges and agrees that the Confidential Information is and will remain the property of HHS. CONTRACTOR agrees it acquires no title or rights to the Confidential Information.

Section 6.02 *HHS Commitment and Obligations*

HHS will not request CONTRACTOR to create, maintain, transmit, use or disclose PHI in any manner that would not be permissible under applicable law if done by HHS.

Section 6.03 *HHS Right to Inspection*

At any time upon reasonable notice to CONTRACTOR, or if HHS determines that CONTRACTOR has violated this DUA, HHS, directly or through its agent, will have the right to inspect the facilities, systems, books and records of CONTRACTOR to monitor compliance with this DUA. For purposes of this subsection, HHS's agent(s) include, without limitation, the HHS Office of the Inspector General or the Office of the Attorney General of Texas, outside consultants or legal counsel or other designee.

Section 6.04 *Term; Termination of DUA; Survival*

This DUA will be effective on the date on which CONTRACTOR executes the DUA, and will terminate upon termination of the Base Contract and as set forth herein. If the Base Contract is extended or amended, this DUA is updated automatically concurrent with such extension or amendment.

(A) HHS may immediately terminate this DUA and Base Contract upon a material violation of this DUA.

(B) Termination or Expiration of this DUA will not relieve CONTRACTOR of its obligation to return or Destroy the Confidential Information as set forth in this DUA and to continue to safeguard the Confidential Information until such time as determined by HHS.

(D) If HHS determines that CONTRACTOR has violated a material term of this DUA; HHS may in its sole discretion:

1. Exercise any of its rights including but not limited to reports, access and inspection under this DUA and/or the Base Contract; or

2. Require CONTRACTOR to submit to a corrective action plan, including a plan for monitoring and plan for reporting, as HHS may determine necessary to maintain compliance with this DUA; or

3. Provide CONTRACTOR with a reasonable period to cure the violation as determined by HHS; or

4. Terminate the DUA and Base Contract immediately, and seek relief in a court of competent jurisdiction in Travis County, Texas.

Before exercising any of these options, HHS will provide written notice to CONTRACTOR describing the violation and the action it intends to take.

(E) If neither termination nor cure is feasible, HHS shall report the violation to the Secretary.

(F) The duties of CONTRACTOR or its Subcontractor under this DUA survive the expiration or termination of this DUA until all the Confidential Information is Destroyed or returned to HHS, as required by this DUA.

Section 6.05 *Governing Law, Venue and Litigation*

(A) The validity, construction and performance of this DUA and the legal relations among the Parties to this DUA will be governed by and construed in accordance with the laws of the State of Texas.

(B) The Parties agree that the courts of Travis County, Texas, will be the exclusive venue for any litigation, special proceeding or other proceeding as between the parties that may be brought, or arise out of, or in connection with, or by reason of this DUA.

Section 6.06 Injunctive Relief

(A) CONTRACTOR acknowledges and agrees that HHS may suffer irreparable injury if CONTRACTOR or its Subcontractor fails to comply with any of the terms of this DUA with respect to

the Confidential Information or a provision of HIPAA or other laws or regulations applicable to Confidential Information.

(B) CONTRACTOR further agrees that monetary damages may be inadequate to compensate HHS for CONTRACTOR's or its Subcontractor's failure to comply. Accordingly, CONTRACTOR agrees that HHS will, in addition to any other remedies available to it at law or in equity, be entitled to seek injunctive relief without posting a bond and without the necessity of demonstrating actual damages, to enforce the terms of this DUA.

Section 6.07 ***Indemnification***

To the extent permitted by law, CONTRACTOR will indemnify, defend and hold harmless HHS and its respective Executive Commissioner, employees, Subcontractors, agents (including other state agencies acting on behalf of HHS) or other members of its Workforce (each of the foregoing hereinafter referred to as "Indemnified Party") against all actual and direct losses suffered by the Indemnified Party and all liability to third parties arising from or in connection with any breach of this DUA or from any acts or omissions related to this DUA by CONTRACTOR or its employees, directors, officers, Subcontractors, or agents or other members of its Workforce. The duty to indemnify, defend and hold harmless is independent of the duty to insure and continues to apply even in the event insurance coverage required, if any, in the DUA or Base Contract is denied, or coverage rights are reserved by any insurance carrier. Upon demand, CONTRACTOR will reimburse HHS for any and all losses, liabilities, lost profits, fines, penalties, costs or expenses (including reasonable attorneys' fees) which may for any reason be imposed upon any Indemnified Party by reason of any suit, claim, action, proceeding or demand by any third party to the extent caused by and which results from the CONTRACTOR's failure to meet any of its obligations under this DUA. To the extent permitted by law, CONTRACTOR's obligation to defend, indemnify and hold harmless any Indemnified Party will survive the expiration or termination of this DUA.

Section 6.08 ***Insurance***

(A) CONTRACTOR represents and warrants that it maintains either self-insurance or commercial insurance with policy limits sufficient to cover any liability arising from any acts or omissions by CONTRACTOR or its employees, directors, officers, Subcontractors, or agents or other members of its Workforce under this DUA. CONTRACTOR warrants that HHS will be a loss payee and beneficiary for any such claims.

(B) CONTRACTOR will provide HHS with written proof that required insurance coverage is in effect, at the request of HHS.

Section 6.09 Fees and Costs

Except as otherwise specified in this DUA or the Base Contract, including but not limited to requirements to insure and/or indemnify HHS, if any legal action or other proceeding is brought for the enforcement of this DUA, or because of an alleged dispute, contract violation, Event, Breach, default, misrepresentation, or injunctive action, in connection with any of the provisions of this DUA, each party will bear their own legal expenses and the other cost incurred in that action or proceeding.

Section 6.10 Entirety of the Contract

This Data Use Agreement is incorporated by reference into the Base Contract and, together with the Base Contract, constitutes the entire agreement between the parties. No change, waiver, or discharge of obligations arising under those documents will be valid unless in writing and executed by the party against whom such change, waiver, or discharge is sought to be enforced.

Section 6.11 Automatic Amendment and Interpretation

Upon the effective date of any amendment or issuance of additional regulations to HIPAA, or any other law applicable to Confidential Information, this DUA will automatically be amended so that the obligations imposed on HHS and/or CONTRACTOR remain in compliance with such requirements. Any ambiguity in this DUA will be resolved in favor of a meaning that permits HHS and CONTRACTOR to comply with HIPAA or any other law applicable to Confidential Information.

Section 6.12 Effective Date

The effective date of this Data Use Agreement is as stated in the contract amendment which incorporates the DUA into the Base Contract.

ATTACHMENT 1. SUBCONTRACTOR AGREEMENT FORM
DADS CONTRACT NUMBER 539-11-0024-00001

The DUA between HHS and CONTRACTOR establishes the permitted and required uses and disclosures of Confidential Information by CONTRACTOR.

CONTRACTOR has subcontracted with Galveston County (SUBCONTRACTOR) for performance of duties on behalf of CONTACTOR which are subject to the DUA. SUBCONTRACTOR acknowledges, understands and agrees to be bound by the identical terms and conditions applicable to CONTRACTOR under the DUA, incorporated by reference in this Agreement, with respect to HHS Confidential Information. CONTRACTOR and SUBCONTRACTOR agree that HHS is a third-party beneficiary to applicable provisions of the subcontract.

HHS has the right but not the obligation to review or approve the terms and conditions of the subcontract by virtue of this Subcontractor Agreement Form.

CONTRACTOR and SUBCONTRACTOR assure HHS that any Breach or Event as defined by the DUA that SUBCONTRACTOR Discovers will be reported to HHS by CONTRACTOR in the time, manner and content required by the DUA.

If CONTRACTOR knows or should have known in the exercise of reasonable diligence of a pattern of activity or practice by SUBCONTRACTOR that constitutes a material breach or violation of the DUA or the SUBCONTRACTOR's obligations CONTRACTOR will:

1. Take reasonable steps to cure the violation or end the violation, as applicable;
2. If the steps are unsuccessful, terminate the contract or arrangement with SUBCONTRACTOR, if feasible;
3. Notify HHS immediately upon reasonably discovery of the pattern of activity or practice of SUBCONTRACTOR that constitutes a material breach or violation of the DUA and keep HHS reasonably and regularly informed about steps CONTRACTOR is taking to cure or end the violation or terminate SUBCONTACTOR's contract or arrangement.

This Subcontractor Agreement Form is executed by the parties in their capacities indicated below.

Description of the Proposed Project [24 CFR 58.32; 40 CFR 1508.25]**:**

Administrative, engineering, and environmental services for CDBG-MIT funds for Galveston County.

Level of Environmental Review Determination:

☐ Activity/Project is Exempt per 24 CFR 58.34(a):
(1) Environmental and other studies, resource identification and the development of plans and strategies;
(3) Administrative and management activities;
(8) Engineering or design costs

☐ Activity/Project is Categorically Excluded Not Subject To §58.5 per 24 CFR 58.35(b):

_____

Funding Information

Grant Number	HUD Program	Funding Amount
2022-100749-RMP	CDBG-MIT	$18,221,223.37

Estimated Total HUD Funded Amount: $18,221,223.37

This project anticipates the use of funds or assistance from another Federal agency in addition to HUD in the form of (if applicable)**: N/A**

Estimated Total Project Cost (HUD and non-HUD funds) [24 CFR 58.32(d)]**:** $18,221,223.37

Compliance with 24 CFR §50.4 and §58.6 Laws and Authorities

Record below the compliance or conformance determinations for each statute, executive order, or regulation. Provide credible, traceable, and supportive source documentation for each authority. Where applicable, complete the necessary reviews or consultations and obtain or note applicable permits of approvals. Clearly note citations, dates/names/titles of contacts, and page references. Attach additional documentation as appropriate.

Compliance Factors: Statutes, Executive Orders, and Regulations listed at 24 CFR 50.4 and 58.6	Are formal compliance steps or mitigation required?	Compliance determinations
STATUTES, EXECUTIVE ORDERS, AND REGULATIONS LISTED AT 24 CFR §58.6		
Airport Runway Clear Zones and Accident Potential Zones 24 CFR Part 51 Subpart D	Yes ☐ No ☒	No portion of the administrative, engineering, or environmental services will take place within 2,500 feet of a civilian airport or within 15,000 feet of a military airfield. Therefore, the project shall have no impact to Runway Clear Zones. This compliance factor will be re-assessed for the project being funded during the project environmental review.
Coastal Barrier Resources Coastal Barrier Resources Act, as amended by the Coastal Barrier Improvement Act of 1990 [16 USC 3501]	Yes ☐ No ☒	No portion of the administrative, engineering, or environmental services will take place within a Coastal Barrier Resources Systems. This compliance factor will be re-assessed for the project being funded during the project environmental review.

Flood Insurance Flood Disaster Protection Act of 1973 and National Flood Insurance Reform Act of 1994 [42 USC 4001-4128 and 42 USC 5154a]	Yes ☐ No ☒	The administrative, engineering, and environmental activities require to farther evaluation under this section. Galveston County is participating in the National Flood Insurance Program. This compliance factor will be re-assessed for the project being funded during the project environmental review.

Mitigation Measures and Conditions [40 CFR 1505.2(c)]

Summarize below all mitigation measures adopted by the Responsible Entity to reduce, avoid, or eliminate adverse environmental impacts and to avoid non-compliance or non-conformance with the above-listed authorities and factors. These measures/conditions must be incorporated into project contracts, development agreements, and other relevant documents. The staff responsible for implementing and monitoring mitigation measures should be clearly identified in the mitigation plan.

MEMORANDUM

To: Galveston County Commissioners' Court

From: Betsy Thomas, Grant Writer

Court Date: November 10, 2025

RE: Office of Emergency Management

Texas Division of Emergency Management – HMGP Application Revision

BACKGROUND

The Hazard Mitigation Grant Program (HMGP) from the Texas Department of Emergency Management provides funding to develop hazard mitigation plans and rebuild in a way that reduces, or mitigates future disaster losses in communities. This grant funding is available after a presidentially declared disaster.

SUMMARY

Galveston County has a FEMA-approved Multi-Jurisdictional Hazard Mitigation Plan that is set to expire in July of 2027. A grant application was approved in Commissions Court in April, 2025 to request $125,000 for the plan update. This original application included a 75/25 match that has been reduced to 90/10 by the state. In addition, the Texas Division of Emergency Management advised the guidelines for multi-jurisdictional plans have mandated increased participation and documentation requirements, leading to an increased quote for the plan update thus resulting in an increased grant request.

With this grant application, The Galveston County Office of Emergency Management is seeking grant funding to procure a contractor/consultant to engage the public and local jurisdictions in the development of an update to the HM Plan for review and approval by Commissioners Court, the State and FEMA.

FINANCIAL SUMMARY

	ORIGINAL	REVISED
HMGP Grant Request	$93,750.00	$180,000.00
County Match (25%)	$31,250.00	$20,000.00
TOTAL	$125,000.00	$200,000.00

RECOMMENDATIONS

Professional Services requests the Court to consider approval to submit the revised DR-4798 HMGP application to the Texas Division of Emergency Management and authorize County Judge to sign 90/10 match commitment letter.

Re: HMGP DR 4798 Galveston County Local Multi-Jurisdictional Multi-Hazard Mitigation Plan Update

Dear Chief Kidd,

Galveston County Commissioners Court originally met on April 14, 2025, to review and approve the submission of the HMGP DR-4798 Galveston County Local Multi-Jurisdictional Multi-Hazard Mitigation Plan Update grant application at $125,000 to the Texas Division of Emergency Management at a 75/25 match ($31,250).

Under advisement of TDEM, the participating jurisdictions and grant match percentage have been amended. Galveston County Commissioners Court met again on November 10, 2025 to approve the resubmission of the Match Commitment at a 90/10 split. The proposed project has an estimated cost of $200,000 with a 90/10 match requirement of $20,000. Galveston County Commissioners' Court approved the allocation of the match amount in the form of cash from the General Fund should other funding not be available from other grant sources.

Please contact Betsy Thomas, Grant Writer if you have any questions about this correspondence or our application at 409-770-5355 or elizabeth.thomas@co.galveston.tx.us.

Sincerely,

Mark Henry

AMENDED SCOPE OF WORK AND ADJUSTED BUDGET

TDEM/HMGP – 90%

Galveston County – 10%

A. PROJECT DESCRIPTION

The proposed project will develop a Hazard Mitigation Plan (HMP) Update for Galveston County and all participating jurisdictions that meets the requirements of the Disaster Mitigation Act (DMA) of 2000, 44 CFR Part 201.6 and the most current Federal Emergency Management Agency (FEMA) "how-to" planning guidance. The plan will meet the most current FEMA Local Mitigation Plan Review Tool requirements. In addition, the plan will be aligned with the 2026/2027 State of Texas Hazard Mitigation Plan.

B. PROJECT PARTICIPANTS

This will be a multi-jurisdictional plan. The following cities are participating jurisdictions (as defined by FEMA) in this multijurisdictional plan update:

Participating Jurisdictions
Facilitating Entity: Galveston County (including unincorporated areas)
City of Bayou Vista
City of Clear Lake Shores
City of Dickinson
City of Friendswood
City of Galveston
City of Hitchcock
City of Jamaica Beach
City of Kemah
City of La Marque
City of League City
City of Santa Fe
Village of Tiki Island
Bolivar Peninsula Special Utility District
Galveston County Water Control and Improvement District #8
Galveston County Water Control and Improvement District #19
Galveston County Drainage District #1
Clear Creek Independent School District
Galveston Independent School District

C. CONTRACTOR

Galveston County will procure a contractor with FEMA grant funds to:

1) Facilitate the planning process;

2) Identify the data requirements;

3) Conduct research;

4) Develop and facilitate the public input process with all participating jurisdictions;

5) Conduct and participate in public community meetings for all participating jurisdictions;
6) Participate in public meetings with the participating jurisdictions;
7) Document the planning process;
8) Produce the draft and final plan document; and,
9) Facilitate the plan adoption process and respond to any RFIs for all participating jurisdictions.

Proposed Line-Item Budget

Scope of Work Phase	Associated Cost
Organize and Review Plan Structure for Update	$22,700.00
Capability Assessment	$13,000.00
Risk Assessment	$46,600.00
Hazard Mitigation Strategy	$42,000.00
Maintenance	$19,500.00
Assemble Plan	$32,250.00
Plan Review and Adoption	$11,200.00
Project Management and Coordination	$12,750.00
TOTAL	**$200,000.00**

The contractor will be responsible to the Galveston County Office of Emergency Management for the following four tasks:
1) Organizing Resources.
2) Hazard Identification and Risk Assessment (HIRA),
3) Developing a Mitigation Strategy, and
4) Plan Adoption, Monitoring & Evaluation.

The contractor will maintain its project management role until FEMA approves the plan update.

The contractor will assist the Galveston County Office of Emergency Management, as necessary, with documentation for grant management and progress reports.

D. PLAN DEVELOPMENT TASKS

The proposed planning project has five tasks:

1. Organize Resources. The plan will document the planning process used to develop the plan update and how the plan will be maintained within a five-year cycle, including the following information:
a) Contractor along with Galveston County will establish a planning team to oversee the development of the plan. The planning team will include representatives from: participating jurisdictions, local elected officials, local and regional agencies involved in hazard mitigation activities, agencies that have the authority to regulate development, neighboring communities, and other public, private, and non-profit interests;

b) Each jurisdiction's participation in the planning process and how they met FEMA's participation requirements;

c) An action plan, involving a variety of methods, for public involvement and comment during the plan development tasks and a public review/comment period. The plan will document both the process and results;

d) Which plans, reports, and technical information were reviewed and incorporated.

e) The participating jurisdictions' implementation and maintenance of the current plan since FEMA's approval; and,

f) How each jurisdiction will continue public participation and monitor, evaluate, and update the plan within a five-year cycle?

2. Hazard Identification and Risk Assessment (HIRA). The updated plan will include an assessment of the changes in development in hazard prone areas and how the vulnerability of each jurisdiction has been affected. The updated plan will also include hazard events that have occurred and any other appropriate changes in data and analysis since the last plan was developed. The HIRA will include the following information, at a minimum:

a) Updated or new descriptions of the natural hazards (and additional human-caused or technological hazards if so desired) affecting each participating jurisdiction, as needed;

b) Analysis of how hazards vary across jurisdictions, if applicable;

c) Updated information on the location, extent, and previous occurrences of each hazard affecting each jurisdiction;

d) Updates on any hazard events that have occurred since the last plan date;

e) Updated information on the probability of future hazard events;

f) An overall summary for each jurisdiction's vulnerability to each hazard. (Rate the impact, for example high, medium, or low and explain the rating system used and the process followed to achieve the ranking);

g) For each jurisdiction, describe in general each hazard's impact on buildings, infrastructure, critical facilities, and the vulnerable population;

h) Describe vulnerability in terms of types and numbers of National Flood Insurance Program (NFIP) insured properties, to include repetitive loss (RL) and severe repetitive loss (SRL) properties, located in the identified hazard areas. Include information regarding insured values and previous claims;

i) Include the most current FEMA Flood Insurance Rate Map (FIRM) in plan, if available;

j) Based on best available data, provide updated information on the vulnerability of existing and future buildings, infrastructure, and critical facilities for each jurisdiction. (Specify the types and numbers of buildings, infrastructure, and critical facilities);

k) Based on best available data, provide estimated potential dollar losses to vulnerable structures, describing the methodology used to prepare the estimate;

l) Based on best available data, describe vulnerability in terms of land use and development trends;

m) Based on best available data, analyze the economic impacts from potential hazards;

n) Based on best available data, describe how potential climate adaptation may impact each jurisdiction's current and future vulnerability to specific hazards; and,

o) Document each jurisdiction's existing authorities, policies, programs, and resources related to hazard mitigation, and its ability to expand on and improve these existing tools.

3. Develop a Mitigation Strategy. Each jurisdiction will participate in the development of a mitigation strategy that reflects the results of the risk assessment and includes the following:

a) Overall goals for reducing risk in the planning area. (The participating jurisdictions may also create objectives as part of the mitigation strategy. The plan will describe how the planning team reviewed, and if applicable, updated the goals and objectives);

b) The plan update will describe mitigation actions in the current plan, identifying which are complete, incomplete (and why), deleted, or continued for each jurisdiction;

c) Specific mitigation actions and projects to reduce the impacts identified in the risk assessment, with an emphasis on new and existing buildings and infrastructure for each jurisdiction. (There must be new identifiable action items for each jurisdiction seeking adoption of the plan);

d) A description of each jurisdiction's participation in the NFIP and continued compliance with NFIP requirements, as appropriate;

e) A description of how the jurisdictions will prioritize and implement the mitigation actions identified for each jurisdiction.

4. Plan Adoption, Monitoring, and Evaluation. The plan will describe a process for adopting, monitoring, and evaluating this plan update, to include the following:

a) The method and schedule for monitoring and evaluating the plan, including progress on action items, updates to the HIRA or mitigation goals and objectives, and adding new mitigation actions before the next plan update;

b) The process to incorporate the mitigation plan into other local planning mechanisms for each jurisdiction, and how the previous mitigation plan elements were incorporated into the same;

c) A strategy for continued public participation;

d) Galveston County will submit the draft plan to TDEM Mitigation Planning Team for review of compliance with FEMA HMP requirements. TDEM will forward the plan to FEMA for review and Approvable Pending Adoption status. The contractor will revise the plan as required by TDEM and FEMA.

(Note- These changes may be required after final payment is made to the contractor in order to maximize the grant award, but final payment does not relieve the contractor of delivery of a FEMA approved plan).

Upon receiving APA status, all participating jurisdictions will formally adopt the plan and provide their resolutions of adoption GCOEM for resolutions. GCOEM will submit to TDEM will provide local resolutions to FEMA for final approval.

MEMORANDUM

To: Galveston County Commissioners' Court

From: Betsy Thomas, Grant Writer

Court Date: January 9, 2023

RE: Community Development Block Grant Mitigation Application
Texas General Land Office
Public Posting Affidavit

BACKGROUND

The U.S. Housing and Urban Development provided Community Development Block Grant Mitigation funding to the State of Texas through the General Land Office. Galveston fell within the Houston-Galveston Area Council Method of Distribution and was awarded $18,221,200.00 for mitigation projects.

SUMMARY

Professional Services met with County departments to review potential mitigation needs and identify allowable projects under the CDBG-MIT guidelines. Attached are the mitigation projects submitted on February 28, 2025 to utilize available funding. Staff has worked with GLO personnel to resolve any remaining project eligibility specifics.

Part of the application process requires the finalized application be posted for fourteen (14) days for public review and comment. The attached application was posted on the Galveston County website from October 1st through October 14th. The attached affidavit regarding this posting requires the County Judge's signature.

INTERAGENCY AGREEMENT FINANCIAL SUMMARY

Grant Application Requests	$18,221,200.00
County Contribution	$0.00
Total Project Cost	$18,221,200.00

RECOMMENDATIONS

Professional Services asks the Court to consider authorization for the County Judge to sign required affidavit regarding the Community Development Block Grant Mitigation application to the Texas General Land Office.

Date: 10/01/2025 - 10/14/2025
Introduction: Community Development Block Grant
Add to my Calendar
The U.S. Housing and Urban Development provided Community Development Block Grant Mitigation funding to the State of Texas through the General Land Office. Galveston County fell within the Houston-Galveston Area Council Method of Distribution and was awarded $18,221,200.00 for mitigation projects.
Grant Writers met with County departments to review potential mitigation needs and identify allowable projects under the CDBG-MIT guidelines for low to moderate income and/or urgent need.
Commissioners Court met on August 5, 2024 to review and approve 30 projects that have now gone through the GLO review and revision process. Attached is the proposed mitigation project application to utilize available CDBG-MIT funding.
Grant Application Requests $18,221,200.00
County Contribution $0.00
Total Project Cost $18,221,200.00
Other: CDBG-MIT-MOD Application as submitted

Duplication of Benefits

FEMA Coverage

Did you receive any FEMA funding? No

Do you anticipate any FEMA funding? No

Was the proposed project eligible for FEMA? No

Is the budget in this application funding for the nonfederal share of a FEMA project? No

If yes, have funds been awarded?

If FEMA funds were received, explain why funds are needed above and beyond the FEMA funding:

Insurance Coverage

Did the applicant have insurance coverage on the proposed project? No

Name of Insurance Company:

Amount claimed/received for the project:

If a claim was not filed, please explain below:

Explain why funds are required above and beyond the insurance funding:

Other Funding

Has the applicant submitted a request to fund a part of or the whole project described in the application? No

Are local or other funds available to address the proposed project in whole or in part?

Have any other state and/or federal agencies been contacted concerning funding for the proposed project? No

Disclose source(s) and use(s) of non-CDBG-MIT funds (Each row is a funding source):

Fair Housing

What methods and criteria were used to prioritize the projects in the application, including affirmatively furthering fair housing? Galveston County furthers fair housing through an annual resolution that appears on the Commissioners Court agenda every April, which is fair housing month. In addition, the County runs a Fair Housing ad in the newspaper that outlines the details of the Fair Housing Act. Fair Housing signs are posted throughout county facilities on a daily basis.

The projects in the CDBG-MIT-MOD application were specifically selected to serve low to moderate income area of the county. Specifically, the street projects will assist lower income neighborhoods with transportability in and out of their neighborhood for work. By changing the streets from asphalt to concrete, they will be less vulnerable during, not only hurricanes, but even high tides, and heavy rain events.

The senior citizen center location was specifically chosen to represent the more vulnerable senior and disabled populations in the county. The Dickinson Senior Center is a historically highly utilized center for senior citizens. However, the current center is below the base flood elevation and is out of commission in flooding events. The new center will be constructed at a higher elevation in the same popular location so it will be available to serve senior and disabled citizens one a daily basis with congregate meals, activities and in disasters with distribution of meals, eater and other critical supplies.

What are the identified protected classes, racially and ethnically concentrated areas, and concentrated areas of poverty that may be impacted by this project? N/A-Road Improvements Project

Provide a meaningful analysis that describes how these identified populations may be impacted by this project. N/A-Road Improvements Project

For each fair housing activity, provide a name and status. If the activity is Completed, enter the Date Initiated. If the activity is Planned, enter the To Be Completed By date:

Item	Name	Status	Date Initiated	To be completed by
Fair Housing Activity 1	2024 Fair Housing Month Activities	Completed	04-01-2024	04-30-2024
Fair Housing Activity 2	2025 Fair Housing Month Activities	Planned	04-01-2025	04-30-2025
Fair Housing Activity 3	2026 Fair Housing Month Activities	Planned	04-01-2026	04-30-2026
Fair Housing Activity 4	2027 Fair Housing Month Activities	Planned	04-01-2027	04-30-2027

Citizen Participation

Did the applicant post the CDBG-MIT application for a minimum of fourteen (14) days? Yes

When did your jurisdiction post the project for public comment?

Start Date: 01-31-2023

End Date: 04-01-2023

Although a public hearing is not required, if your jurisdiction held one, list the date and attach the supporting documents:

Although a resolution is not required, did your jurisdiction approve one? No

Procurement

Have services been procured for Engineering, Grant Administration, or Environmental Services? No

Are there any persons/entities with a reportable financial interest to disclose? No

Bacliff-Avenue A Street Improvements

Project Info

Project Information

DRGR Activity: Street Improvements

Project Type: Street Improvements

Project Title: Bacliff-Avenue A Street Improvements

Does this project include replacement or relocation of a facility (i.e., lift station, water treatment plant, etc.)? No

Provide a detailed description of the scope of work proposed. For proposed work involving a length of road, ditch, channel, etc., report the scope of the project in linear feet (lf): Bacliff, Texas runs along the Houston Ship channel with commerce and oil and gas production traversing the Highway 146 corridor between the Port of Houston and the refineries/plants of Texas City including multiple Marathon locations, Valero, Advario, Rosefield, and Eastman. Bacliff's proximity to Highway 146 includes it in the communities that create a hub for business, trade, tourism, recreational opportunities and one of the nation's largest energy production corridors between Pasadena and Texas City.

Bacliff is geographically situated directly between Galveston Bay to the east and Highway 146 to the west creating a bowl effect where storm water collects and is slow to drain due to outdated and inefficient drainage infrastructure. The County of Galveston contacted the local National Weather Service (NWS) office to request the number of flash flooding events which have impacted Bacliff. The NWS accessed NOAA's National Centers for Environmental Information and noted having issued 21 flash flood warnings between 5/12/12 and 9/15/23. Six of these warnings resulted in flooding which caused property damage. Notable events include Hurricane Harvey in August of 2017, which resulted in $4,000,000 in damages to the Bayview neighborhood in Bacliff and a rainfall event on June 4, 2021, which flooded 100 homes and caused $500,000 in property damage in the Bacliff community.

The current drainage system in the Bayview neighborhood was designed and constructed in the mid 1900's when many of the homes were built with no requirements for the inclusion of impervious surfaces and retainage ponds to lower the impact of heavy rainfall events. Over the last 40 years, private homes along the bay have increased in size and value with an increased need for elevated foundations, which contributes to the bowl effect of the inner neighborhoods of the Bacliff community. In addition, an exponential increase in business development along Highway 146 with increased impervious surface for foundations and large parking lots along with the ever-increasing elevation of the highway have further exasperated the flooding problems of the Bacliff area.

In response to the Bacliff's identified flood risk, this flood resistant street improvement entails the replacement of 357 LF of existing asphalt roadway with 357 LF of more durable concrete pavement from the intersection of 19th Street and Avenue A to the intersection of 18th Street and Avenue A in Bacliff, Texas, a census designated place approximately 16 miles northwest of Galveston, Texas (Start Point: 29.502056, -94.995583; Midpoint: 29.502333, -94.995278; and

End Point: 29.502556, -94.994917). Once design and engineering are complete and required permits received, equipment, materials, and personnel will be mobilized to the site. The roadway will be closed to traffic and the existing asphalt road surface and base material will be removed using a stabilizer/reclaimer. The subbase will then be stabilized with lime to reduce the plasticity of the clay. The subbase will then be cured using a light fog spray of water or bituminous curing agent at a rate of 0.15 to 0.25 gal/yd2. If the construction contractor determines that trimming of the cement-treated subbase is unavoidable, just before paving, the surface will be treated to prevent bonding of the base to the surface. The applicable bond breakers may include reapplication of the bituminous curing agent with a thin layer of sand or the application of two coats of wax-based curing compound. The reinforced concrete pavement will then be formed and placed over the base and subbase. The concrete pavement will be six inches in uniform thickness, with 5.0 sacks of Portland Cement used per cubic yard and will be reinforced with #4 (1/2") deformed steel reinforcing bars spaced a maximum of 18" center to center each way. Once cured and tested, equipment, personnel and excess materials will be transported from the project site, and the roadway will be reopened to traffic.

Site: Project Site Title	Site: Street Address
Bacliff - Avenue A Street Improvements	Avenue A, Bacliff, TX

Describe a plan for the long-term funding and management of the operations and maintenance of the project: Galveston County Road and Bridge Department is responsible for maintaining this road segment. Lee Crowder is the road administrator and ultimately responsible for ensuring all county roads are operated and maintained appropriately. The department ensures the road surfaces are cleaned throughout the year, as conditions require, any identified cracks are sealed, and the road segment is resealed in its entirety as needed. The current county budget already accounts for expenditures to maintain all county roads, including this segment.

Total proposed number of linear feet: 357

Total number of proposed public facilities:

National Objective

National Objective

Provide Total Number of Beneficiaries: 1,465

Provide number of LMI Beneficiaries 1,465

Percentage of LMI Beneficiaries: 100%

Is that applicant a HUD Exception Grantee? No

Census Tract	Block Group List (Text)
7,217	Group 3

Male: 755

Female: 710

Total: 1,465

Race	Hispanic Population	Non-Hispanic Population	Total Population
White	0	0	0
Some Other Race	419	802	1,221
Other Multi-Racial	54	0	54
Native Hawaiian / Other Pacific Islander	0	1	1
Black African American	6	36	42
Asian/White	0	24	24
Asian	0	0	0
American Indian/Alaskan Native/White	7	44	51
American Indian/Alaskan Native/Black African American	2	14	16
American Indian/Alaskan Native	30	26	56

Race	Hispanic Population	Non-Hispanic Population	Total Population
Black African American/White	0	0	0

Which HUD national objective does the project meet? LMI

Describe activities that benefit low- and moderate-income people: The entire census block is comprised of low to moderate income people. Ensuring the roadway is accessible to local residents will enable timely travel to the nearest evacuation route should hurricane force winds/accompanying rain be forecasted.

Method(s) used to determine the beneficiaries: LMI Area Benefit

What method was used for Beneficiary Identification? Census (HUD LMISD)

Provide a brief description of the beneficiary identification method used to determine this national objective and upload supporting beneficiary maps, census data, and/or survey documents: The beneficiary population was determined through a geospatial analysis of the most recent census block data using the American Community Survey Summary File Retrieval Tool and ArcGIS.

U.S. Congressional District #: 14

Texas Representative District #: 23

Texas Senate District #: 11

Environmental

What is the current status of the project? Not yet begun

Will the assistance requested have any negative impact(s) or effect(s) on the environment? No

Is the proposed project likely to require an archaeological assessment? No

Is the proposed site(s) listed on the National Register of Historic Places? No

Is the project in a designated floodway or coastal high hazard area? No

Is the project in a designated special flood hazard area or a designated wetland? No

For projects in the 500 or 100-year floodplain: Does your project involve a critical action as defined in 24CFR55.2(b)(3)?

Is any project site located in a known critical habitat for endangered species? No

Is any project site a known hazardous site? No

Is any project site located on federal lands or at a federal installation? No

Is any project site subject to or participating in Fixing America's Surface Transportation Act (FAST-41) (P.L. 114-94)? No

What level of environmental review is likely needed for this project? Exempt

Provide any additional detail or information relevant to Environmental Review: Galveston County does not anticipate that the proposed project will have any negative environmental consequences as the activity (replacing asphalt with concrete) an equal amount of material along the same amount of linear feet of existing roadway. No new ground disturbance will occur.

Provide a brief narrative regarding how CDBG-MIT funding is to be used. Demonstrate that HUD CDBG environmental requirements have been met to date:

Permits

Does the project require any federal, state, or other permits, approvals, or waivers to complete the proposed work? No

If yes, describe the type and purpose of each permit and its association with the proposed project. Provide a copy of each permit already executed:

Does the project require any type of ratified, legally binding agreement between the applicant and any other entity to provide continual operation upon completion? No

If yes, describe the type and purpose of each agreement and its association with the proposed project. Provide a copy of each agreement already executed or drafted:

For sewer and/or water facilities projects, does the applicant currently hold the Certificate of Convenience and Necessity (CCN) for the target area proposed in the application? (If not a sewer and/or water facilities project, please choose N/A): N/A

Budget Activity Lines

Program Budget Code	Planned/Requested Amount	Planned Other Funds Amount	Total	Percent of Total
Planning	$0.00	$0.00	$0.00	0%
Acquisition	$0.00	$0.00	$0.00	0%
Environmental	$0.00	$0.00	$0.00	0%
Special Environmental	$0.00	$0.00	$0.00	0%
Grant Administration	$3,265.75	$0.00	$3,265.75	5%
Engineering	$3,110.25	$0.00	$3,110.25	4.7%
Construction	$59,468.88	$0.00	$59,468.88	90.3%

Mitigation

Identify the specific risk the proposed project will mitigate against: Severe Coastal Flooding

Describe as to how the proposed project addresses/mitigates against the current and future risks identified: Replacing the asphalt roadway segment with concrete will mitigate against current and future risk by minimizing the impacts of excessive coastal storm surge and runoff, negating the creation of urban heat islands, and ensuring residents' access to a community lifeline which facilitates travel to the nearest identified evacuation route should hurricane force winds and accompanying rain be forecasted. The chosen construction material will be more resilient for the following reasons:

•Concrete is more resistant to heavy rainfall and flooding. Unlike asphalt which can deteriorate quickly when exposed to water, concrete remains stable and intact, reduction the need for frequent repairs and ensuring safer road conditions.

•Concrete's ability to reflect sunlight helps it remain cooler than asphalt, which absorbs and retains heat. With its higher albedo, concrete reflects more sunlight than asphalt, which absorbs heat. This property helps to keep urban areas cooler, combating the urban heat island effect.

•From an environmental perspective, concrete production emits fewer greenhouse gases compared to asphalt. Moreover, concrete can be recycled and reused in new construction projects, minimizing environmental impact and promoting sustainability.

•Concrete is less prone to rutting and deformation under heavy loads and high temperatures with a superior load-bearing capacity. This resistance ensures a more consistent and safer driving surface, reducing the risk of vehicle damage and accidents.

•Concrete streets boast a significantly longer lifespan than their asphalt counterparts. Typically, concrete roads can last between 20 to 40 years with minimal maintenance, whereas asphalt streets often require resurfacing and repairs every 10 to 15 years. This longevity makes concrete a cost-effective option in the long run.

Provide information about how the proposed mitigation efforts integrate into the community's emergency and resiliency plans: The proposed mitigation effort, modification to the identified roadway segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: “Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards “ (p.270)

The proposed mitigation activity is also in concert with the goals of the Texas Water Development Board’s 2024 Texas Flood Plan which includes roadway safety and early warning system goals. The plan notes “This includes goals to improve safety at low water crossings, improve the level of service for exposed roadway segments, and increase the implementation of flood early warning systems for roadways and flood prone areas” (p.183). Further, the roadway improvements in the Bacliff and San Leon areas would complement Project #0611000436 on p.

31 of Volume II of the 2024 Texas State Flood Plan, which is an analysis of roadside ditch and driveway improvements in Bacliff and San Leon.

In addition, significant damage to the roadway segments would impede residents from being able to access the nearest hurricane evacuation route per Galveston County's Hurricane Evacuation Mapping (Houston-Galveston Area Council-Hurricane Evacuation | Galveston, TX - Official Website).

See the 2022 Galveston County Hazard Mitigation Plan reference document, Texas Flood Plan reference document, and the Houston-Galveston Area Council's Evacuation Route documentation.

In the space provided, list documentation provided to support the identification of the threat or hazard and how it relates to potential impact: The hazard was identified through consultation with the national weather service, a review of the NOAA storm events database, and review of the risk assessment within the hazard mitigation plan. The national weather service issued 21 flash flood warnings between 5/2012 and 9/2023 which resulted in over $4M in property damages according to the Office of Emergency Management.

Provide a brief description of how the proposed project addresses an integrated approach to mitigation: This project demonstrates an integrated approach towards mitigation as the county takes part in local and regional planning efforts and considered this project within the context of those planning efforts to determine if the project was in concert with both local and mitigation goals, objectives and strategies. This was accomplished by considering a number of factors/indicators as the project was developed including local and regional community acceptance of the project; effects on local and regional populations; technical feasibility and secondary local and regional impacts; the degree of local and regional public and political support for the project; existing local and regional legal authorities; costs, benefits, and the project's contribution to the local and regional economy; and existing local and regional environmental laws, regulations and ordinances.

Considering the local evaluation of hazard risks, responsible floodplain management, future extreme weather/natural disaster events, and long-term risks, describe how the proposed project promotes sustainable community resilience: The project promotes sustainable community resilience as it affords unimpeded access to a critical community lifeline, transportation. This segment of roadway is a part of the overarching county and regional transportation infrastructure. Transportation, as with other community lifelines, enables the continuous operation of critical government and business functions and is essential to human health and safety or economic security. Unimpeded access to this community lifeline has the potential to save lives by facilitating first responder's egress and ingress to homes within the community and community members' access to emergency evacuation routes should hurricane force winds and rains be forecasted. The project promotes economic security as unimpeded access to transportation routes allows community members to maintain or seek employment and patronize local businesses.

Describe how the proposed project is consistent with local and regional planning efforts to effect disaster mitigation: The proposed mitigation effort, modification to the identified roadway segments to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: "Goal 1: Minimize loss of life, injury,

damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards " (p.270)

Further, the plan also includes a project specific to the Bacliff area of Galveston County which the proposed road improvements to the Bacliff area included in this application would complement. Mitigation action 2022-Galveston County 0-12 on p. 330 of the plan states "Problem: The Bacliff area of Galveston County has storm water restrictions due to a bowl effect of the surrounding state highways (SH 146, SH 646 Grand Ave) and high elevation bluff along Galveston Bay. Solution: Improve channel drains and culvert crossing thru the State Highways."

The proposed mitigation activity is also in concert with the goals of the Texas Water Development Board's 2024 Texas Flood Plan which includes roadway safety and early warning system goals. The plan notes "This includes goals to improve safety at low water crossings, improve the level of service for exposed roadway segments, and increase the implementation of flood early warning systems for roadways and flood prone areas" (p.183). Further, the roadway improvements in the Bacliff and San Leon areas would complement Project #0611000436 on p. 31 of Volume II of the 2024 Texas State Flood Plan, which is an analysis of roadside ditch and driveway improvements in Bacliff and San Leon.

Was a cost-benefit analysis used in the selection of the proposed project? Yes

Describe how the proposed project impacts vulnerable populations in the local community.: Either the entire census block or a substantial portion of the census block consists of low to moderate income persons, which are vulnerable solely based on their socio-economic status. Replacing the roadway segments with a more durable flood-resistant material will enable residents to more readily access evacuation routes during inclement weather events and places of employment and community service providers on a daily basis.

Describe how the proposed project creates economic opportunities for the local community: The project in and of itself does not create economic opportunities, but it does facilitate access to economic opportunities by enabling residents to be able to travel to their places of employment (employed residents) or potential places of employment (jobseekers). Further, residents will be able to continue to frequent local businesses including gas stations, grocery stores, restaurants, and other small locally owned businesses which rely on their customer bases to remain solvent and drive the local economy.

Does this project disproportionately impact vulnerable populations in the local community? No

Does the proposed project align with investments from other state or local capital improvements and infrastructure development efforts? Yes

Does the proposed project employ adaptable and reliable technology to guard against premature obsolescence? Yes

Describe the applicant's overall mitigation plan and how the project addressed in this application furthers that plan: The proposed mitigation effort, modification to the identified roadway segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: "Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards " (p.270)

Further, the plan also includes a project specific to the Bacliff area of Galveston County which the proposed road improvements to the Bacliff area included in this application would complement. Mitigation action 2022-Galveston County 0-12 on p. 330 of the plan states "Problem: The Bacliff area of Galveston County has storm water restrictions due to a bowl effect of the surrounding state highways (SH 146, SH 646 Grand Ave) and high elevation bluff along Galveston Bay. Solution: Improve channel drains and culvert crossing thru the State Highways."

Describe how the proposed project will contribute to the community's resiliency against future disasters as a result of these projects: Replacing the asphalt roadway segment with concrete will mitigate against future risk by minimizing the impacts of excessive coastal storm surge and runoff, negating the creation of urban heat islands, and ensuring residents are able to travel unimpeded to the nearest identified evacuation route should hurricane force winds and accompanying rain be forecasted.

Bacliff-Avenue B Street Improvements

Project Info

Project Information

DRGR Activity: Street Improvements

Project Type: Street Improvements

Project Title: Bacliff-Avenue B Street Improvements

Does this project include replacement or relocation of a facility (i.e., lift station, water treatment plant, etc.)? No

Provide a detailed description of the scope of work proposed. For proposed work involving a length of road, ditch, channel, etc., report the scope of the project in linear feet (lf): Bacliff, Texas runs along the Houston Ship channel with commerce and oil and gas production traversing the Highway 146 corridor between the Port of Houston and the refineries/plants of Texas City including multiple Marathon locations, Valero, Advario, Rosefield, and Eastman. Bacliff's proximity to Highway 146 includes it in the communities that create a hub for business, trade, tourism, recreational opportunities and one of the nation's largest energy production corridors between Pasadena and Texas City.

Bacliff is geographically situated directly between Galveston Bay to the east and Highway 146 to the west creating a bowl effect where storm water collects and is slow to drain due to outdated and inefficient drainage infrastructure. The County of Galveston contacted the local National Weather Service (NWS) office to request the number of flash flooding events which have impacted Bacliff. The NWS accessed NOAA's National Centers for Environmental Information and noted having issued 21 flash flood warnings between 5/12/22 and 9/15/23. Six of these warnings resulted in flooding which caused property damage. Notable events include Hurricane Harvey in August of 2017, which resulted in $4,000,000 in damages to the Bayview neighborhood in Bacliff and a rainfall event on June 4, 2021, which flooded 100 homes and caused $500,000 in property damage in the Bacliff community.

The current drainage system in the Bacliff neighborhoods was designed and constructed in the mid 1900's when many of the homes were built with no requirements for the inclusion of impervious surfaces and retainage ponds to lower the impact of heavy rainfall events. Over the last 40 years, private homes along the bay have increased in size and value with an increased need for elevated foundations, which contributes to the bowl effect of the inner neighborhoods of the Bacliff community. In addition, an exponential increase in business development along Highway 146 with increased impervious surface for foundations and large parking lots along with the ever-increasing elevation of the highway have further exasperated the flooding problems of the Bacliff area.

In response to the Bacliff's identified flood risk, this flood resistant street improvement includes the replacement of 709 LF of existing asphalt roadway with 709 LF of more durable concrete pavement from the intersection of 20th Street and Avenue B to the intersection of 18th Street and Avenue B in Bacliff, Texas, a census designated place approximately 16 miles northwest of

Galveston, Texas (Start Point: 29.500111, -94.995111; Midpoint: 29.500611, -94.994389; and End Point: 29.500011, -94.993639).

Once design and engineering are complete and required permits received, equipment, materials, and personnel will be mobilized to the site. The roadway will be closed to traffic and the existing asphalt road surface and base material will be removed using a stabilizer/reclaimer. The subbase will then be stabilized with lime to reduce the plasticity of the clay. The subbase will then be cured using a light fog spray of water or bituminous curing agent at a rate of 0.15 to 0.25 gal/yd2. If the construction contractor determines that trimming of the cement-treated subbase is unavoidable, just before paving, the surface will be treated to prevent bonding of the base to the surface. The applicable bond breakers may include reapplication of the bituminous curing agent with a thin layer of sand or the application of two coats of wax-based curing compound. The reinforced concrete pavement will then be formed and placed over the base and subbase. The concrete pavement will be six inches in uniform thickness, with 5.0 sacks of Portland Cement used per cubic yard and will be reinforced with #4 (1/2") deformed steel reinforcing bars spaced a maximum of 18" center to center each way. Once cured and tested, equipment, personnel and excess materials will be transported from the project site, and the roadway will be reopened to traffic.

Site: Project Site Title	Site: Street Address
Bacliff - Avenue B Street Improvements	Avenue B betwen 20th St and 18th

Describe a plan for the long-term funding and management of the operations and maintenance of the project: Galveston County Road and Bridge Department is responsible for maintaining this road segment. Lee Crowder is the road administrator and ultimately responsible for ensuring all county roads are operated and maintained appropriately. The department ensures the road surfaces are cleaned throughout the year, as conditions require, any identified cracks are sealed, and the road segment is resealed in its entirety as needed. The current county budget already accounts for expenditures to maintain all county roads, including this segment.

Total proposed number of linear feet: 709

Total number of proposed public facilities:

American Indian/Alaskan Native	30	26	56

Which HUD national objective does the project meet? LMI

Describe activities that benefit low- and moderate-income people: The entire census block is comprised of low to moderate income people. Ensuring the roadway is accessible to local residents will enable timely travel to the nearest evacuation route should hurricane force winds/accompanying rain be forecasted.

Method(s) used to determine the beneficiaries: LMI Area Benefit

What method was used for Beneficiary Identification? Census (HUD LMISD)

Provide a brief description of the beneficiary identification method used to determine this national objective and upload supporting beneficiary maps, census data, and/or survey documents: The beneficiary population was determined through a geospatial analysis of the most recent census block data using the American Community Survey Summary File Retrieval Tool and ArcGIS.

U.S. Congressional District #: 14

Texas Representative District #: 23

Texas Senate District #: 11

Environmental

What is the current status of the project? Not yet begun

Will the assistance requested have any negative impact(s) or effect(s) on the environment? No

Is the proposed project likely to require an archaeological assessment? No

Is the proposed site(s) listed on the National Register of Historic Places? No

Is the project in a designated floodway or coastal high hazard area? No

Is the project in a designated special flood hazard area or a designated wetland? No

For projects in the 500 or 100-year floodplain: Does your project involve a critical action as defined in 24CFR55.2(b)(3)?

Is any project site located in a known critical habitat for endangered species? No

Is any project site a known hazardous site? No

Is any project site located on federal lands or at a federal installation? No

Is any project site subject to or participating in Fixing America's Surface Transportation Act (FAST-41) (P.L. 114-94)? No

What level of environmental review is likely needed for this project? Exempt

Provide any additional detail or information relevant to Environmental Review: N/A

Provide a brief narrative regarding how CDBG-MIT funding is to be used. Demonstrate that HUD CDBG environmental requirements have been met to date:

Permits

Does the project require any federal, state, or other permits, approvals, or waivers to complete the proposed work? No

If yes, describe the type and purpose of each permit and its association with the proposed project. Provide a copy of each permit already executed:

Does the project require any type of ratified, legally binding agreement between the applicant and any other entity to provide continual operation upon completion? No

If yes, describe the type and purpose of each agreement and its association with the proposed project. Provide a copy of each agreement already executed or drafted:

For sewer and/or water facilities projects, does the applicant currently hold the Certificate of Convenience and Necessity (CCN) for the target area proposed in the application? (If not a sewer and/or water facilities project, please choose N/A): N/A

Budget Activity Lines

Mitigation

Identify the specific risk the proposed project will mitigate against: Severe Coastal Flooding

Describe as to how the proposed project addresses/mitigates against the current and future risks identified: Replacing the asphalt roadway segment with concrete will mitigate against current and future risk by minimizing the impacts of excessive coastal storm surge and runoff, negating the creation of urban heat islands, and ensuring residents' access to a community lifeline which facilitates travel to the nearest identified evacuation route should hurricane force winds and accompanying rain be forecasted. The chosen construction material will be more resilient for the following reasons:

•Concrete is more resistant to heavy rainfall and flooding. Unlike asphalt which can deteriorate quickly when exposed to water, concrete remains stable and intact, reduction the need for frequent repairs and ensuring safer road conditions.

•Concrete's ability to reflect sunlight helps it remain cooler than asphalt, which absorbs and retains heat. With its higher albedo, concrete reflects more sunlight than asphalt, which absorbs heat. This property helps to keep urban areas cooler, combating the urban heat island effect.

•From an environmental perspective, concrete production emits fewer greenhouse gases compared to asphalt. Moreover, concrete can be recycled and reused in new construction projects, minimizing environmental impact and promoting sustainability.

•Concrete is less prone to rutting and deformation under heavy loads and high temperatures with a superior load-bearing capacity. This resistance ensures a more consistent and safer driving surface, reducing the risk of vehicle damage and accidents.

•Concrete streets boast a significantly longer lifespan than their asphalt counterparts. Typically, concrete roads can last between 20 to 40 years with minimal maintenance, whereas asphalt streets often require resurfacing and repairs every 10 to 15 years. This longevity makes concrete a cost-effective option in the long run.

Provide information about how the proposed mitigation efforts integrate into the community's emergency and resiliency plans: The proposed mitigation effort, modification to the identified roadway segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: “Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards “ (p.270)

The proposed mitigation activity is also in concert with the goals of the Texas Water Development Board’s 2024 Texas Flood Plan which includes roadway safety and early warning system goals. The plan notes “This includes goals to improve safety at low water crossings, improve the level of service for exposed roadway segments, and increase the implementation of flood early warning systems for roadways and flood prone areas” (p.183). Further, the roadway improvements in the Bacliff and San Leon areas would complement Project #0611000436 on p.

31 of Volume II of the 2024 Texas State Flood Plan, which is an analysis of roadside ditch and driveway improvements in Bacliff and San Leon.

In addition, significant damage to the roadway segments would impede residents from being able to access the nearest hurricane evacuation route per Galveston County's Hurricane Evacuation Mapping (Houston-Galveston Area Council-Hurricane Evacuation | Galveston, TX - Official Website).

See the 2022 Galveston County Hazard Mitigation Plan reference document, Texas Flood Plan reference document, and the Houston-Galveston Area Council's Evacuation Route documentation.

In the space provided, list documentation provided to support the identification of the threat or hazard and how it relates to potential impact: The hazard was identified through consultation with the national weather service, a review of the NOAA storm events database, and review of the risk assessment within the hazard mitigation plan. The national weather service issued 21 flash flood warnings between 5/2012 and 9/2023 which resulted in over $4M in property damages according to the Office of Emergency Management.

Provide a brief description of how the proposed project addresses an integrated approach to mitigation: This project demonstrates an integrated approach towards mitigation as the county takes part in local and regional planning efforts and considered this project within the context of those planning efforts to determine if the project was in concert with both local and mitigation goals, objectives and strategies. This was accomplished by considering a number of factors/indicators as the project was developed including local and regional community acceptance of the project; effects on local and regional populations; technical feasibility and secondary local and regional impacts; the degree of local and regional public and political support for the project; existing local and regional legal authorities; costs, benefits, and the project's contribution to the local and regional economy; and existing local and regional environmental laws, regulations and ordinances.

Considering the local evaluation of hazard risks, responsible floodplain management, future extreme weather/natural disaster events, and long-term risks, describe how the proposed project promotes sustainable community resilience: The project promotes sustainable community resilience as it affords unimpeded access to a critical community lifeline, transportation. This segment of roadway is a part of the overarching county and regional transportation infrastructure. Transportation, as with other community lifelines, enables the continuous operation of critical government and business functions and is essential to human health and safety or economic security. Unimpeded access to this community lifeline has the potential to save lives by facilitating first responder's egress and ingress to homes within the community and community members' access to emergency evacuation routes should hurricane force winds and rains be forecasted. The project promotes economic security as unimpeded access to transportation routes allows community members to maintain or seek employment and patronize local businesses.

Describe how the proposed project is consistent with local and regional planning efforts to effect disaster mitigation: The proposed mitigation effort, modification to the identified roadway segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: "Goal 1: Minimize loss of life, injury,

damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards " (p.270)

Further, the plan also includes a project specific to the Bacliff area of Galveston County which the proposed road improvements to the Bacliff area included in this application would complement. Mitigation action 2022-Galveston County 0-12 on p. 330 of the plan states "Problem: The Bacliff area of Galveston County has storm water restrictions due to a bowl effect of the surrounding state highways (SH 146, SH 646 Grand Ave) and high elevation bluff along Galveston Bay. Solution: Improve channel drains and culvert crossing thru the State Highways."

The proposed mitigation activity is also in concert with the goals of the Texas Water Development Board's 2024 Texas Flood Plan which includes roadway safety and early warning system goals. The plan notes "This includes goals to improve safety at low water crossings, improve the level of service for exposed roadway segments, and increase the implementation of flood early warning systems for roadways and flood prone areas" (p.183). Further, the roadway improvements in the Bacliff and San Leon areas would complement Project #0611000436 on p. 31 of Volume II of the 2024 Texas State Flood Plan, which is an analysis of roadside ditch and driveway improvements in Bacliff and San Leon.

Was a cost-benefit analysis used in the selection of the proposed project? Yes

Describe how the proposed project impacts vulnerable populations in the local community.: Either the entire census block or a substantial portion of the census block consists of low to moderate income persons, which are vulnerable solely based on their socio-economic status. Replacing the roadway segments with a more durable flood-resistant material will enable residents to more readily access evacuation routes during inclement weather events and places of employment and community service providers on a daily basis.

Describe how the proposed project creates economic opportunities for the local community: The project in and of itself does not create economic opportunities, but it does facilitate access to economic opportunities by enabling residents to be able to travel to their places of employment (employed residents) or potential places of employment (jobseekers). Further, residents will be able to continue to frequent local businesses including gas stations, grocery stores, restaurants, and other small locally owned businesses which rely on their customer bases to remain solvent and drive the local economy.

Does this project disproportionately impact vulnerable populations in the local community? No

Does the proposed project align with investments from other state or local capital improvements and infrastructure development efforts? Yes

Does the proposed project employ adaptable and reliable technology to guard against premature obsolescence? Yes

Describe the applicant's overall mitigation plan and how the project addressed in this application furthers that plan: The proposed mitigation effort, modification to the identified roadway segments to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: "Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards " (p.270)

Further, the plan also includes a project specific to the Bacliff area of Galveston County which the proposed road improvements to the Bacliff area included in this application would complement. Mitigation action 2022-Galveston County 0-12 on p. 330 of the plan states "Problem: The Bacliff area of Galveston County has storm water restrictions due to a bowl effect of the surrounding state highways (SH 146, SH 646 Grand Ave) and high elevation bluff along Galveston Bay. Solution: Improve channel drains and culvert crossing thru the State Highways."

Describe how the proposed project will contribute to the community's resiliency against future disasters as a result of these projects: Replacing the asphalt roadway segment with concrete will mitigate against future risk by minimizing the impacts of excessive coastal storm surge and runoff, negating the creation of urban heat islands, and ensuring residents are able to travel unimpeded to the nearest identified evacuation route should hurricane force winds and accompanying rain be forecasted.

Bacliff-Avenue D Street Improvements

Project Info

Project Information

DRGR Activity: Street Improvements

Project Type: Street Improvements

Project Title: Bacliff-Avenue D Street Improvements

Does this project include replacement or relocation of a facility (i.e., lift station, water treatment plant, etc.)? No

Provide a detailed description of the scope of work proposed. For proposed work involving a length of road, ditch, channel, etc., report the scope of the project in linear feet (lf): Bacliff, Texas runs along the Houston Ship channel with commerce and oil and gas production traversing the Highway 146 corridor between the Port of Houston and the refineries/plants of Texas City including multiple Marathon locations, Valero, Advario, Rosefield, and Eastman. Bacliff's proximity to Highway 146 includes it in the communities that create a hub for business, trade, tourism, recreational opportunities and one of the nation's largest energy production corridors between Pasadena and Texas City.

Bacliff is geographically situated directly between Galveston Bay to the east and Highway 146 to the west creating a bowl effect where storm water collects and is slow to drain due to outdated and inefficient drainage infrastructure. The County of Galveston contacted the local National Weather Service (NWS) office to request the number of flash flooding events which have impacted Bacliff. The NWS accessed NOAA's National Centers for Environmental Information and noted having issued 21 flash flood warnings between 5/12/22 and 9/15/23. Six of these warnings resulted in flooding which caused property damage. Notable events include Hurricane Harvey in August of 2017, which resulted in $4,000,000 in damages to the Bayview neighborhood in Bacliff and a rainfall event on June 4, 2021, which flooded 100 homes and caused $500,000 in property damage in the Bacliff community.

The current drainage system in the Bacliff neighborhoods was designed and constructed in the mid 1900's when many of the homes were built with no requirements for the inclusion of impervious surfaces and retainage ponds to lower the impact of heavy rainfall events. Over the last 40 years, private homes along the bay have increased in size and value with an increased need for elevated foundations, which contributes to the bowl effect of the inner neighborhoods of the Bacliff community. In addition, an exponential increase in business development along Highway 146 with increased impervious surface for foundations and large parking lots along with the ever-increasing elevation of the highway have further exasperated the flooding problems of the Bacliff area. In response to the Bacliff's identified flood risk, this flood resistant street improvement entails the replacement of 353 LF of existing asphalt roadway with 353 LF of more durable concrete pavement from the intersection of 20th Street and Ave D to the intersection of 19th Street and Ave Di n Bacliff, Texas, a census designated place approximately 16 miles northwest of Galveston, Texas (Start: 29.498472, -94.993583; Midpoint: 29.498667, -94.99325; End: 29.498917, -94.992917).

Once design and engineering are complete and required permits received, equipment, materials, and personnel will be mobilized to the site. The roadway will be closed to traffic and the existing asphalt road surface and base material will be removed using a stabilizer/reclaimer. The subbase will then be stabilized with lime to reduce the plasticity of the clay. The subbase will then be cured using a light fog spray of water or bituminous curing agent at a rate of 0.15 to 0.25 gal/yd2. If the construction contractor determines that trimming of the cement-treated subbase is unavoidable, just before paving, the surface will be treated to prevent bonding of the base to the surface. The applicable bond breakers may include reapplication of the bituminous curing agent with a thin layer of sand or the application of two coats of wax-based curing compound. The reinforced concrete pavement will then be formed and placed over the base and subbase. The concrete pavement will be six inches in uniform thickness, with 5.0 sacks of Portland Cement used per cubic yard and will be reinforced with #4 (1/2") deformed steel reinforcing bars spaced a maximum of 18" center to center each way. Once cured and tested, equipment, personnel and excess materials will be transported from the project site, and the roadway will be reopened to traffic.

Site: Project Site Title	Site: Street Address
Bacliff -Avenue D Street Improvements	Avenue D, Bacliff, TX

Describe a plan for the long-term funding and management of the operations and maintenance of the project: Galveston County Road and Bridge Department is responsible for maintaining this road segment. Lee Crowder is the road administrator and ultimately responsible for ensuring all county roads are operated and maintained appropriately. The department ensures the road surfaces are cleaned throughout the year, as conditions require, any identified cracks are sealed, and the road segment is resealed in its entirety as needed. The current county budget already accounts for expenditures to maintain all county roads, including this segment.

Total proposed number of linear feet: 353

Total number of proposed public facilities:

American Indian/Alaskan Native/Black African American	0	0	0

Race	Hispanic Population	Non-Hispanic Population	Total Population
American Indian/Alaskan Native	30	26	56

Which HUD national objective does the project meet? LMI

Describe activities that benefit low- and moderate-income people: A significant portion of the census block is comprised of low to moderate income people. Ensuring the roadway is accessible to local residents will enable timely travel to the nearest evacuation route should hurricane force winds/accompanying rain be forecasted.

Method(s) used to determine the beneficiaries: LMI Area Benefit

What method was used for Beneficiary Identification? Census (HUD LMISD)

Provide a brief description of the beneficiary identification method used to determine this national objective and upload supporting beneficiary maps, census data, and/or survey documents: The beneficiary population was determined through a geospatial analysis of the most recent census block data using the American Community Survey Summary File Retrieval Tool and ArcGIS.

U.S. Congressional District #: 14

Texas Representative District #: 23

Texas Senate District #: 11

Environmental

What is the current status of the project? Not yet begun

Will the assistance requested have any negative impact(s) or effect(s) on the environment? No

Is the proposed project likely to require an archaeological assessment? No

Is the proposed site(s) listed on the National Register of Historic Places? No

Is the project in a designated floodway or coastal high hazard area? No

Is the project in a designated special flood hazard area or a designated wetland? No

For projects in the 500 or 100-year floodplain: Does your project involve a critical action as defined in 24CFR55.2(b)(3)?

Is any project site located in a known critical habitat for endangered species? No

Is any project site a known hazardous site? No

Is any project site located on federal lands or at a federal installation? No

Is any project site subject to or participating in Fixing America's Surface Transportation Act (FAST-41) (P.L. 114-94)? No

What level of environmental review is likely needed for this project? Environmental Assessment

Provide any additional detail or information relevant to Environmental Review: Galveston County does not anticipate that the proposed project will have any negative environmental consequences as the activity (replacing asphalt with concrete) replaces an equal amount of material along the same amount of linear feet of existing roadway. No new ground disturbance will occur.

Provide a brief narrative regarding how CDBG-MIT funding is to be used. Demonstrate that HUD CDBG environmental requirements have been met to date:

Permits

Does the project require any federal, state, or other permits, approvals, or waivers to complete the proposed work? No

If yes, describe the type and purpose of each permit and its association with the proposed project. Provide a copy of each permit already executed:

Does the project require any type of ratified, legally binding agreement between the applicant and any other entity to provide continual operation upon completion? No

If yes, describe the type and purpose of each agreement and its association with the proposed project. Provide a copy of each agreement already executed or drafted:

For sewer and/or water facilities projects, does the applicant currently hold the Certificate of Convenience and Necessity (CCN) for the target area proposed in the application? (If not a sewer and/or water facilities project, please choose N/A): N/A

Budget Activity Lines

Program Budget Code	Planned/Requested Amount	Planned Other Funds Amount	Total	Percent of Total

Engineering	$2,943.92	$0.00	$2,943.92	4.5%
Construction	$58,845.29	$0.00	$58,845.29	90.7%

Mitigation

Identify the specific risk the proposed project will mitigate against: Severe Coastal Flooding

Describe as to how the proposed project addresses/mitigates against the current and future risks identified: Replacing the asphalt roadway segment with concrete will mitigate against current and future risk by minimizing the impacts of excessive coastal storm surge and runoff, negating the creation of urban heat islands, and ensuring residents' access to a community lifeline which facilitates travel to the nearest identified evacuation route should hurricane force winds and accompanying rain be forecasted. The chosen construction material will be more resilient for the following reasons:

•Concrete is more resistant to heavy rainfall and flooding. Unlike asphalt which can deteriorate quickly when exposed to water, concrete remains stable and intact, reduction the need for frequent repairs and ensuring safer road conditions.

•Concrete's ability to reflect sunlight helps it remain cooler than asphalt, which absorbs and retains heat. With its higher albedo, concrete reflects more sunlight than asphalt, which absorbs heat. This property helps to keep urban areas cooler, combating the urban heat island effect.

•From an environmental perspective, concrete production emits fewer greenhouse gases compared to asphalt. Moreover, concrete can be recycled and reused in new construction projects, minimizing environmental impact and promoting sustainability.

•Concrete is less prone to rutting and deformation under heavy loads and high temperatures with a superior load-bearing capacity. This resistance ensures a more consistent and safer driving surface, reducing the risk of vehicle damage and accidents.

•Concrete streets boast a significantly longer lifespan than their asphalt counterparts. Typically, concrete roads can last between 20 to 40 years with minimal maintenance, whereas asphalt streets often require resurfacing and repairs every 10 to 15 years. This longevity makes concrete a cost-effective option in the long run.

Provide information about how the proposed mitigation efforts integrate into the community's emergency and resiliency plans: The proposed mitigation effort, modification to the identified roadway segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: “Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards “ (p.270)

The proposed mitigation activity is also in concert with the goals of the Texas Water Development Board’s 2024 Texas Flood Plan which includes roadway safety and early warning system goals. The plan notes “This includes goals to improve safety at low water crossings, improve the level of service for exposed roadway segments, and increase the implementation of flood early warning systems for roadways and flood prone areas” (p.183). Further, the roadway improvements in the Bacliff and San Leon areas would complement Project #0611000436 on p.

31 of Volume II of the 2024 Texas State Flood Plan, which is an analysis of roadside ditch and driveway improvements in Bacliff and San Leon.

In addition, significant damage to the roadway segments would impede residents from being able to access the nearest hurricane evacuation route per Galveston County's Hurricane Evacuation Mapping (Houston-Galveston Area Council-Hurricane Evacuation | Galveston, TX - Official Website).

See the 2022 Galveston County Hazard Mitigation Plan reference document, Texas Flood Plan reference document, and the Houston-Galveston Area Council's Evacuation Route documentation.

In the space provided, list documentation provided to support the identification of the threat or hazard and how it relates to potential impact: The hazard was identified through consultation with the national weather service, a review of the NOAA storm events database, and review of the risk assessment within the hazard mitigation plan. The national weather service issued 21 flash flood warnings between 5/2012 and 9/2023 which resulted in over $4M in property damages according to the Office of Emergency Management.

Provide a brief description of how the proposed project addresses an integrated approach to mitigation: This project demonstrates an integrated approach towards mitigation as the county takes part in local and regional planning efforts and considered this project within the context of those planning efforts to determine if the project was in concert with both local and mitigation goals, objectives and strategies. This was accomplished by considering a number of factors/indicators as the project was developed including local and regional community acceptance of the project; effects on local and regional populations; technical feasibility and secondary local and regional impacts; the degree of local and regional public and political support for the project; existing local and regional legal authorities; costs, benefits, and the project's contribution to the local and regional economy; and existing local and regional environmental laws, regulations and ordinances.

Considering the local evaluation of hazard risks, responsible floodplain management, future extreme weather/natural disaster events, and long-term risks, describe how the proposed project promotes sustainable community resilience: The project promotes sustainable community resilience as it affords unimpeded access to a critical community lifeline, transportation. This segment of roadway is a part of the overarching county and regional transportation infrastructure. Transportation, as with other community lifelines, enables the continuous operation of critical government and business functions and is essential to human health and safety or economic security. Unimpeded access to this community lifeline has the potential to save lives by facilitating first responder's egress and ingress to homes within the community and community members' access to emergency evacuation routes should hurricane force winds and rains be forecasted. The project promotes economic security as unimpeded access to transportation routes allows community members to maintain or seek employment and patronize local businesses.

Describe how the proposed project is consistent with local and regional planning efforts to effect disaster mitigation: The proposed mitigation effort, modification to the identified roadway segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: "Goal 1: Minimize loss of life, injury,

damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards " (p.270)

Further, the plan also includes a project specific to the Bacliff area of Galveston County which the proposed road improvements to the Bacliff area included in this application would complement. Mitigation action 2022-Galveston County 0-12 on p. 330 of the plan states "Problem: The Bacliff area of Galveston County has storm water restrictions due to a bowl effect of the surrounding state highways (SH 146, SH 646 Grand Ave) and high elevation bluff along Galveston Bay. Solution: Improve channel drains and culvert crossing thru the State Highways."

The proposed mitigation activity is also in concert with the goals of the Texas Water Development Board's 2024 Texas Flood Plan which includes roadway safety and early warning system goals. The plan notes "This includes goals to improve safety at low water crossings, improve the level of service for exposed roadway segments, and increase the implementation of flood early warning systems for roadways and flood prone areas" (p.183). Further, the roadway improvements in the Bacliff and San Leon areas would complement Project #0611000436 on p. 31 of Volume II of the 2024 Texas State Flood Plan, which is an analysis of roadside ditch and driveway improvements in Bacliff and San Leon.

Was a cost-benefit analysis used in the selection of the proposed project? No

Describe how the proposed project impacts vulnerable populations in the local community.: Either the entire census block or a substantial portion of the census block consists of low to moderate income persons, which are vulnerable solely based on their socio-economic status. Replacing the roadway segments with a more durable flood-resistant material will enable residents to more readily access evacuation routes during inclement weather events and places of employment and community service providers on a daily basis.

Describe how the proposed project creates economic opportunities for the local community: The project in and of itself does not create economic opportunities, but it does facilitate access to economic opportunities by enabling residents to be able to travel to their places of employment (employed residents) or potential places of employment (jobseekers). Further, residents will be able to continue to frequent local businesses including gas stations, grocery stores, restaurants, and other small locally owned businesses which rely on their customer bases to remain solvent and drive the local economy.

Does this project disproportionately impact vulnerable populations in the local community? No

Does the proposed project align with investments from other state or local capital improvements and infrastructure development efforts? Yes

Does the proposed project employ adaptable and reliable technology to guard against premature obsolescence? Yes

Describe the applicant's overall mitigation plan and how the project addressed in this application furthers that plan: The proposed mitigation effort, modification to the identified roadway segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: "Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards " (p.270)

Further, the plan also includes a project specific to the Bacliff area of Galveston County which the proposed road improvements to the Bacliff area included in this application would complement. Mitigation action 2022-Galveston County 0-12 on p. 330 of the plan states “Problem: The Bacliff area of Galveston County has storm water restrictions due to a bowl effect of the surrounding state highways (SH 146, SH 646 Grand Ave) and high elevation bluff along Galveston Bay. Solution: Improve channel drains and culvert crossing thru the State Highways.”

Describe how the proposed project will contribute to the community's resiliency against future disasters as a result of these projects: Replacing the asphalt roadway segment with concrete will mitigate against future risk by minimizing the impacts of excessive coastal storm surge and runoff, negating the creation of urban heat islands, and ensuring residents are able to travel unimpeded to the nearest identified evacuation route should hurricane force winds and accompanying rain be forecasted.

Bacliff-Baker Avenue Street Improvements

Project Info

Project Information

DRGR Activity: Street Improvements

Project Type: Street Improvements

Project Title: Bacliff-Baker Avenue Street Improvements

Does this project include replacement or relocation of a facility (i.e., lift station, water treatment plant, etc.)? No

Provide a detailed description of the scope of work proposed. For proposed work involving a length of road, ditch, channel, etc., report the scope of the project in linear feet (lf): Bacliff, Texas runs along the Houston Ship channel with commerce and oil and gas production traversing the Highway 146 corridor between the Port of Houston and the refineries/plants of Texas City including multiple Marathon locations, Valero, Advario, Rosefield, and Eastman. Bacliff's proximity to Highway 146 includes it in the communities that create a hub for business, trade, tourism, recreational opportunities and one of the nation's largest energy production corridors between Pasadena and Texas City. Bacliff is geographically situated directly between Galveston Bay to the east and Highway 146 to the west creating a bowl effect where storm water collects and is slow to drain due to outdated and inefficient drainage infrastructure. The County of Galveston contacted the local National Weather Service (NWS) office to request the number of flash flooding events which have impacted Bacliff. The NWS accessed NOAA's National Centers for Environmental Information and noted having issued 21 flash flood warnings between 5/12/22 and 9/15/23. Six of these warnings resulted in flooding which caused property damage. Notable events include Hurricane Harvey in August of 2017, which resulted in $4,000,000 in damages to the Bayview neighborhood in Bacliff and a rainfall event on June 4, 2021, which flooded 100 homes and caused $500,000 in property damage in the Bacliff community.

The current drainage system in the identified neighborhoods was designed and constructed in the mid 1900's when many of the homes were built with no requirements for the inclusion of impervious surfaces and retainage ponds to lower the impact of heavy rainfall events. Over the last 40 years, private homes along the bay have increased in size and value with an increased need for elevated foundations, which contributes to the bowl effect of the inner neighborhoods of the Bacliff community. In addition, an exponential increase in business development along Highway 146 with increased impervious surface for foundations and large parking lots along with the ever-increasing elevation of the highway have further exasperated the flooding problems of the Bacliff area.

In response to the Bacliff's identified flood risk, this flood resistant street improvement entails the replacement of 541 LF of existing asphalt roadway with 541 LF of more durable concrete pavement from the intersection of N Hwy 146 and Baker Avenue to the intersection of Miller Street and Baker Avenue (Start: 29.503222, -94.997556; Midpoint: 29.503611, -94.997167; End: 29.504028, -94.996556).

Once design and engineering are complete and required permits received, equipment, materials, and personnel will be mobilized to the site. The roadway will be closed to traffic and the existing asphalt road surface and base material will be removed using a stabilizer/reclaimer. The subbase will then be stabilized with lime to reduce the plasticity of the clay. The subbase will then be cured using a light fog spray of water or bituminous curing agent at a rate of 0.15 to 0.25 gal/yd2. If the construction contractor determines that trimming of the cement-treated subbase is unavoidable, just before paving, the surface will be treated to prevent bonding of the base to the surface. The applicable bond breakers may include reapplication of the bituminous curing agent with a thin layer of sand or the application of two coats of wax-based curing compound. The reinforced concrete pavement will then be formed and placed over the base and subbase. The concrete pavement will be six inches in uniform thickness, with 5.0 sacks of Portland Cement used per cubic yard and will be reinforced with #4 (1/2") deformed steel reinforcing bars spaced a maximum of 18" center to center each way. Once cured and tested, equipment, personnel and excess materials will be transported from the project site, and the roadway will be reopened to traffic.

Site: Project Site Title	Site: Street Address
Bacliff - Baker Street Improvements	Bacliff, Baker Avenue

Describe a plan for the long-term funding and management of the operations and maintenance of the project: Galveston County Road and Bridge Department is responsible for maintaining this road segment. Lee Crowder is the road administrator and ultimately responsible for ensuring all county roads are operated and maintained appropriately. The department ensures the road surfaces are cleaned throughout the year, as conditions require, any identified cracks are sealed, and the road segment is resealed in its entirety as needed. The current county budget already accounts for expenditures to maintain all county roads, including this segment.

Total proposed number of linear feet: 541

Which HUD national objective does the project meet? LMI

Describe activities that benefit low- and moderate-income people: The entire census block is comprised of low to moderate income people. Ensuring the roadway is accessible to local residents will enable timely travel to the nearest evacuation route should hurricane force winds/accompanying rain be forecasted.

Method(s) used to determine the beneficiaries: LMI Area Benefit

What method was used for Beneficiary Identification? Census (HUD LMISD)

Provide a brief description of the beneficiary identification method used to determine this national objective and upload supporting beneficiary maps, census data, and/or survey documents: The beneficiary population was determined through a geospatial analysis of the most recent census block data using the American Community Survey Summary File Retrieval Tool and ArcGIS.

U.S. Congressional District #: 14

Texas Representative District #: 23

Texas Senate District #: 11

Environmental

What is the current status of the project? Not yet begun

Will the assistance requested have any negative impact(s) or effect(s) on the environment? No

Is the proposed project likely to require an archaeological assessment? No

Is the proposed site(s) listed on the National Register of Historic Places? No

Is the project in a designated floodway or coastal high hazard area? No

Is the project in a designated special flood hazard area or a designated wetland? No

For projects in the 500 or 100-year floodplain: Does your project involve a critical action as defined in 24CFR55.2(b)(3)?

Is any project site located in a known critical habitat for endangered species? No

Is any project site a known hazardous site? No

Is any project site located on federal lands or at a federal installation? No

Is any project site subject to or participating in Fixing America's Surface Transportation Act (FAST-41) (P.L. 114-94)? No

What level of environmental review is likely needed for this project? Exempt

Provide any additional detail or information relevant to Environmental Review: Galveston County does not anticipate that the proposed project will have any negative environmental consequences as the activity (replacing asphalt with concrete) replaces an equal amount of material along the same amount of linear feet of existing roadway. No new ground disturbance will occur.

Provide a brief narrative regarding how CDBG-MIT funding is to be used. Demonstrate that HUD CDBG environmental requirements have been met to date:

Permits

Does the project require any federal, state, or other permits, approvals, or waivers to complete the proposed work? No

If yes, describe the type and purpose of each permit and its association with the proposed project. Provide a copy of each permit already executed:

Does the project require any type of ratified, legally binding agreement between the applicant and any other entity to provide continual operation upon completion? No

If yes, describe the type and purpose of each agreement and its association with the proposed project. Provide a copy of each agreement already executed or drafted:

For sewer and/or water facilities projects, does the applicant currently hold the Certificate of Convenience and Necessity (CCN) for the target area proposed in the application? (If not a sewer and/or water facilities project, please choose N/A): N/A

Mitigation

Identify the specific risk the proposed project will mitigate against: Severe Coastal Flooding

Describe as to how the proposed project addresses/mitigates against the current and future risks identified: Replacing the asphalt roadway segment with concrete will mitigate against current and future risk by minimizing the impacts of excessive coastal storm surge and runoff, negating the creation of urban heat islands, and ensuring residents' access to a community lifeline which facilitates travel to the nearest identified evacuation route should hurricane force winds and accompanying rain be forecasted. The chosen construction material will be more resilient for the following reasons:

•Concrete is more resistant to heavy rainfall and flooding. Unlike asphalt which can deteriorate quickly when exposed to water, concrete remains stable and intact, reduction the need for frequent repairs and ensuring safer road conditions.

•Concrete's ability to reflect sunlight helps it remain cooler than asphalt, which absorbs and retains heat. With its higher albedo, concrete reflects more sunlight than asphalt, which absorbs heat. This property helps to keep urban areas cooler, combating the urban heat island effect.

•From an environmental perspective, concrete production emits fewer greenhouse gases compared to asphalt. Moreover, concrete can be recycled and reused in new construction projects, minimizing environmental impact and promoting sustainability.

•Concrete is less prone to rutting and deformation under heavy loads and high temperatures with a superior load-bearing capacity. This resistance ensures a more consistent and safer driving surface, reducing the risk of vehicle damage and accidents.

•Concrete streets boast a significantly longer lifespan than their asphalt counterparts. Typically, concrete roads can last between 20 to 40 years with minimal maintenance, whereas asphalt streets often require resurfacing and repairs every 10 to 15 years. This longevity makes concrete a cost-effective option in the long run.

Provide information about how the proposed mitigation efforts integrate into the community's emergency and resiliency plans: The proposed mitigation effort, modification to the identified roadway segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: “Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards “ (p.270)

The proposed mitigation activity is also in concert with the goals of the Texas Water Development Board’s 2024 Texas Flood Plan which includes roadway safety and early warning system goals. The plan notes “This includes goals to improve safety at low water crossings, improve the level of service for exposed roadway segments, and increase the implementation of flood early warning systems for roadways and flood prone areas” (p.183). Further, the roadway improvements in the Bacliff and San Leon areas would complement Project #0611000436 on p.

31 of Volume II of the 2024 Texas State Flood Plan, which is an analysis of roadside ditch and driveway improvements in Bacliff and San Leon.

In addition, significant damage to the roadway segments would impede residents from being able to access the nearest hurricane evacuation route per Galveston County's Hurricane Evacuation Mapping (Houston-Galveston Area Council-Hurricane Evacuation | Galveston, TX - Official Website).

See the 2022 Galveston County Hazard Mitigation Plan reference document, Texas Flood Plan reference document, and the Houston-Galveston Area Council's Evacuation Route documentation.

In the space provided, list documentation provided to support the identification of the threat or hazard and how it relates to potential impact: The hazard was identified through consultation with the national weather service, a review of the NOAA storm events database, and review of the risk assessment within the hazard mitigation plan. The national weather service issued 21 flash flood warnings between 5/2012 and 9/2023 which resulted in over $4M in property damages according to the Office of Emergency Management.

Provide a brief description of how the proposed project addresses an integrated approach to mitigation: This project demonstrates an integrated approach towards mitigation as the county takes part in local and regional planning efforts and considered this project within the context of those planning efforts to determine if the project was in concert with both local and mitigation goals, objectives and strategies. This was accomplished by considering a number of factors/indicators as the project was developed including local and regional community acceptance of the project; effects on local and regional populations; technical feasibility and secondary local and regional impacts; the degree of local and regional public and political support for the project; existing local and regional legal authorities; costs, benefits, and the project's contribution to the local and regional economy; and existing local and regional environmental laws, regulations and ordinances.

Considering the local evaluation of hazard risks, responsible floodplain management, future extreme weather/natural disaster events, and long-term risks, describe how the proposed project promotes sustainable community resilience: The project promotes sustainable community resilience as it affords unimpeded access to a critical community lifeline, transportation. This segment of roadway is a part of the overarching county and regional transportation infrastructure. Transportation, as with other community lifelines, enables the continuous operation of critical government and business functions and is essential to human health and safety or economic security. Unimpeded access to this community lifeline has the potential to save lives by facilitating first responder's egress and ingress to homes within the community and community members' access to emergency evacuation routes should hurricane force winds and rains be forecasted. The project promotes economic security as unimpeded access to transportation routes allows community members to maintain or seek employment and patronize local businesses.

Describe how the proposed project is consistent with local and regional planning efforts to effect disaster mitigation: The proposed mitigation effort, modification to the identified roadway segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: "Goal 1: Minimize loss of life, injury,

damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards " (p.270)

Further, the plan also includes a project specific to the Bacliff area of Galveston County which the proposed road improvements to the Bacliff area included in this application would complement. Mitigation action 2022-Galveston County 0-12 on p. 330 of the plan states "Problem: The Bacliff area of Galveston County has storm water restrictions due to a bowl effect of the surrounding state highways (SH 146, SH 646 Grand Ave) and high elevation bluff along Galveston Bay. Solution: Improve channel drains and culvert crossing thru the State Highways."

The proposed mitigation activity is also in concert with the goals of the Texas Water Development Board's 2024 Texas Flood Plan which includes roadway safety and early warning system goals. The plan notes "This includes goals to improve safety at low water crossings, improve the level of service for exposed roadway segments, and increase the implementation of flood early warning systems for roadways and flood prone areas" (p.183). Further, the roadway improvements in the Bacliff and San Leon areas would complement Project #0611000436 on p. 31 of Volume II of the 2024 Texas State Flood Plan, which is an analysis of roadside ditch and driveway improvements in Bacliff and San Leon.

Was a cost-benefit analysis used in the selection of the proposed project? No

Describe how the proposed project impacts vulnerable populations in the local community.: Either the entire census block or a substantial portion of the census block consists of low to moderate income persons, which are vulnerable solely based on their socio-economic status. Replacing the roadway segments with a more durable flood-resistant material will enable residents to more readily access evacuation routes during inclement weather events and places of employment and community service providers on a daily basis.

Describe how the proposed project creates economic opportunities for the local community: The project in and of itself does not create economic opportunities, but it does facilitate access to economic opportunities by enabling residents to be able to travel to their places of employment (employed residents) or potential places of employment (jobseekers). Further, residents will be able to continue to frequent local businesses including gas stations, grocery stores, restaurants, and other small locally owned businesses which rely on their customer bases to remain solvent and drive the local economy.

Does this project disproportionately impact vulnerable populations in the local community? No

Does the proposed project align with investments from other state or local capital improvements and infrastructure development efforts? Yes

Does the proposed project employ adaptable and reliable technology to guard against premature obsolescence? Yes

Describe the applicant's overall mitigation plan and how the project addressed in this application furthers that plan: The proposed mitigation effort, modification to the identified roadway segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: "Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards " (p.270)

Further, the plan also includes a project specific to the Bacliff area of Galveston County which the proposed road improvements to the Bacliff area included in this application would complement. Mitigation action 2022-Galveston County 0-12 on p. 330 of the plan states "Problem: The Bacliff area of Galveston County has storm water restrictions due to a bowl effect of the surrounding state highways (SH 146, SH 646 Grand Ave) and high elevation bluff along Galveston Bay. Solution: Improve channel drains and culvert crossing thru the State Highways."

Describe how the proposed project will contribute to the community's resiliency against future disasters as a result of these projects: Replacing the asphalt roadway segment with concrete will mitigate against future risk by minimizing the impacts of excessive coastal storm surge and runoff, negating the creation of urban heat islands, and ensuring residents are able to travel unimpeded to the nearest identified evacuation route should hurricane force winds and accompanying rain be forecasted.

Bacliff-Jackson Avenue Street Improvements

Project Info

Project Information

DRGR Activity: Street Improvements

Project Type: Street Improvements

Project Title: Bacliff-Jackson Avenue Street Improvements

Does this project include replacement or relocation of a facility (i.e., lift station, water treatment plant, etc.)? No

Provide a detailed description of the scope of work proposed. For proposed work involving a length of road, ditch, channel, etc., report the scope of the project in linear feet (lf): Bacliff, Texas runs along the Houston Ship channel with commerce and oil and gas production traversing the Highway 146 corridor between the Port of Houston and the refineries/plants of Texas City including multiple Marathon locations, Valero, Advario, Rosefield, and Eastman. Bacliff's proximity to Highway 146 includes it in the communities that create a hub for business, trade, tourism, recreational opportunities and one of the nation's largest energy production corridors between Pasadena and Texas City.

Bacliff is geographically situated directly between Galveston Bay to the east and Highway 146 to the west creating a bowl effect where storm water collects and is slow to drain due to outdated and inefficient drainage infrastructure. The County of Galveston contacted the local National Weather Service (NWS) office to request the number of flash flooding events which have impacted Bacliff. The NWS accessed NOAA's National Centers for Environmental Information and noted having issued 21 flash flood warnings between 5/12/12 and 9/15/23. Six of these warnings resulted in flooding which caused property damage. Notable events include Hurricane Harvey in August of 2017, which resulted in $4,000,000 in damages to the Bayview neighborhood in Bacliff and a rainfall event on June 4, 2021, which flooded 100 homes and caused $500,000 in property damage in the Bacliff community.

The current drainage system in the Bayview neighborhood was designed and constructed in the mid 1900's when many of the homes were built with no requirements for the inclusion of impervious surfaces and retainage ponds to lower the impact of heavy rainfall events. Over the last 40 years, private homes along the bay have increased in size and value with an increased need for elevated foundations, which contributes to the bowl effect of the inner neighborhoods of the Bacliff community. In addition, an exponential increase in business development along Highway 146 with increased impervious surface for foundations and large parking lots along with the ever-increasing elevation of the highway have further exasperated the flooding problems of the Bacliff area.

In response to the Bacliff's identified flood risk, this flood resistant street improvement entails the replacement of 635 LF of existing asphalt roadway with 635 LF of more durable concrete pavement from the intersection of N Hwy 146 & Jackson Avenue to intersection of Miller Street and Jackson Avenue (Start: 29.502194, -94.996889; Midpoint: 29.502667, -94.996389; End: 29.503083, -94.995778). Once design and engineering are complete and required permits

received, equipment, materials, and personnel will be mobilized to the site. The roadway will be closed to traffic and the existing asphalt road surface and base material will be removed using a stabilizer/reclaimer. The subbase will then be stabilized with lime to reduce the plasticity of the clay. The subbase will then be cured using a light fog spray of water or bituminous curing agent at a rate of 0.15 to 0.25 gal/yd2. If the construction contractor determines that trimming of the cement-treated subbase is unavoidable, just before paving, the surface will be treated to prevent bonding of the base to the surface. The applicable bond breakers may include reapplication of the bituminous curing agent with a thin layer of sand or the application of two coats of wax-based curing compound. The reinforced concrete pavement will then be formed and placed over the base and subbase. The concrete pavement will be six inches in uniform thickness, with 5.0 sacks of Portland Cement used per cubic yard and will be reinforced with #4 (1/2") deformed steel reinforcing bars spaced a maximum of 18" center to center each way. Once cured and tested, equipment, personnel and excess materials will be transported from the project site, and the roadway will be reopened to traffic.

Site: Project Site Title	Site: Street Address
Bacliff - Jackson Street Improvements	Bacliff, Jackson Ave

Describe a plan for the long-term funding and management of the operations and maintenance of the project: Galveston County Road and Bridge Department is responsible for maintaining this road segment. Lee Crowder is the road administrator and ultimately responsible for ensuring all county roads are operated and maintained appropriately. The department ensures the road surfaces are cleaned throughout the year, as conditions require, any identified cracks are sealed, and the road segment is resealed in its entirety as needed. The current county budget already accounts for expenditures to maintain all county roads, including this segment.

Total proposed number of linear feet: 635

Total number of proposed public facilities:

American Indian/Alaskan Native	30	26	56

Which HUD national objective does the project meet? LMI

Describe activities that benefit low- and moderate-income people: The entire census block is comprised of low to moderate income people. Ensuring the roadway is accessible to local residents will enable timely travel to the nearest evacuation route should hurricane force winds/accompanying rain be forecasted.

Method(s) used to determine the beneficiaries: LMI Area Benefit

What method was used for Beneficiary Identification? Census (HUD LMISD)

Provide a brief description of the beneficiary identification method used to determine this national objective and upload supporting beneficiary maps, census data, and/or survey documents: The beneficiary population was determined through a geospatial analysis of the most recent census block data using the American Community Survey Summary File Retrieval Tool and ArcGIS.

U.S. Congressional District #: 14

Texas Representative District #: 23

Texas Senate District #: 11

Environmental

What is the current status of the project? Not yet begun

Will the assistance requested have any negative impact(s) or effect(s) on the environment? No

Is the proposed project likely to require an archaeological assessment? No

Is the proposed site(s) listed on the National Register of Historic Places? No

Is the project in a designated floodway or coastal high hazard area? No

Is the project in a designated special flood hazard area or a designated wetland? No

For projects in the 500 or 100-year floodplain: Does your project involve a critical action as defined in 24CFR55.2(b)(3)?

Is any project site located in a known critical habitat for endangered species? No

Is any project site a known hazardous site? No

Is any project site located on federal lands or at a federal installation? No

Is any project site subject to or participating in Fixing America's Surface Transportation Act (FAST-41) (P.L. 114-94)? No

What level of environmental review is likely needed for this project? Exempt

Provide any additional detail or information relevant to Environmental Review: Galveston County does not anticipate that the proposed project will have any negative environmental consequences as the activity (replacing asphalt with concrete) replaces an equal amount of material along the same amount of linear feet of existing roadway. No new ground disturbance will occur.

Provide a brief narrative regarding how CDBG-MIT funding is to be used. Demonstrate that HUD CDBG environmental requirements have been met to date:

Permits

Does the project require any federal, state, or other permits, approvals, or waivers to complete the proposed work? No

If yes, describe the type and purpose of each permit and its association with the proposed project. Provide a copy of each permit already executed:

Does the project require any type of ratified, legally binding agreement between the applicant and any other entity to provide continual operation upon completion? No

If yes, describe the type and purpose of each agreement and its association with the proposed project. Provide a copy of each agreement already executed or drafted:

For sewer and/or water facilities projects, does the applicant currently hold the Certificate of Convenience and Necessity (CCN) for the target area proposed in the application? (If not a sewer and/or water facilities project, please choose N/A): N/A

Construction	$106,976.17	$0.00	$106,976.17	90.7%

Mitigation

Identify the specific risk the proposed project will mitigate against: Severe Coastal Flooding

Describe as to how the proposed project addresses/mitigates against the current and future risks identified: Replacing the asphalt roadway segment with concrete will mitigate against current and future risk by minimizing the impacts of excessive coastal storm surge and runoff, negating the creation of urban heat islands, and ensuring residents' access to a community lifeline which facilitates travel to the nearest identified evacuation route should hurricane force winds and accompanying rain be forecasted. The chosen construction material will be more resilient for the following reasons:

•Concrete is more resistant to heavy rainfall and flooding. Unlike asphalt which can deteriorate quickly when exposed to water, concrete remains stable and intact, reduction the need for frequent repairs and ensuring safer road conditions.

•Concrete's ability to reflect sunlight helps it remain cooler than asphalt, which absorbs and retains heat. With its higher albedo, concrete reflects more sunlight than asphalt, which absorbs heat. This property helps to keep urban areas cooler, combating the urban heat island effect.

•From an environmental perspective, concrete production emits fewer greenhouse gases compared to asphalt. Moreover, concrete can be recycled and reused in new construction projects, minimizing environmental impact and promoting sustainability.

•Concrete is less prone to rutting and deformation under heavy loads and high temperatures with a superior load-bearing capacity. This resistance ensures a more consistent and safer driving surface, reducing the risk of vehicle damage and accidents.

•Concrete streets boast a significantly longer lifespan than their asphalt counterparts. Typically, concrete roads can last between 20 to 40 years with minimal maintenance, whereas asphalt streets often require resurfacing and repairs every 10 to 15 years. This longevity makes concrete a cost-effective option in the long run.

Provide information about how the proposed mitigation efforts integrate into the community's emergency and resiliency plans: The proposed mitigation effort, modification to the identified roadway segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: “Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards “ (p.270)

The proposed mitigation activity is also in concert with the goals of the Texas Water Development Board’s 2024 Texas Flood Plan which includes roadway safety and early warning system goals. The plan notes “This includes goals to improve safety at low water crossings, improve the level of service for exposed roadway segments, and increase the implementation of flood early warning systems for roadways and flood prone areas” (p.183). Further, the roadway improvements in the Bacliff and San Leon areas would complement Project #0611000436 on p.

31 of Volume II of the 2024 Texas State Flood Plan, which is an analysis of roadside ditch and driveway improvements in Bacliff and San Leon.

In addition, significant damage to the roadway segments would impede residents from being able to access the nearest hurricane evacuation route per Galveston County's Hurricane Evacuation Mapping (Houston-Galveston Area Council-Hurricane Evacuation | Galveston, TX - Official Website).

See the 2022 Galveston County Hazard Mitigation Plan reference document, Texas Flood Plan reference document, and the Houston-Galveston Area Council's Evacuation Route documentation.

In the space provided, list documentation provided to support the identification of the threat or hazard and how it relates to potential impact: The hazard was identified through consultation with the national weather service, a review of the NOAA storm events database, and review of the risk assessment within the hazard mitigation plan. The national weather service issued 21 flash flood warnings between 5/2012 and 9/2023 which resulted in over $4M in property damages according to the Office of Emergency Management.

Provide a brief description of how the proposed project addresses an integrated approach to mitigation: This project demonstrates an integrated approach towards mitigation as the county takes part in local and regional planning efforts and considered this project within the context of those planning efforts to determine if the project was in concert with both local and mitigation goals, objectives and strategies. This was accomplished by considering a number of factors/indicators as the project was developed including local and regional community acceptance of the project; effects on local and regional populations; technical feasibility and secondary local and regional impacts; the degree of local and regional public and political support for the project; existing local and regional legal authorities; costs, benefits, and the project's contribution to the local and regional economy; and existing local and regional environmental laws, regulations and ordinances.

Considering the local evaluation of hazard risks, responsible floodplain management, future extreme weather/natural disaster events, and long-term risks, describe how the proposed project promotes sustainable community resilience: The project promotes sustainable community resilience as it affords unimpeded access to a critical community lifeline, transportation. This segment of roadway is a part of the overarching county and regional transportation infrastructure. Transportation, as with other community lifelines, enables the continuous operation of critical government and business functions and is essential to human health and safety or economic security. Unimpeded access to this community lifeline has the potential to save lives by facilitating first responder's egress and ingress to homes within the community and community members' access to emergency evacuation routes should hurricane force winds and rains be forecasted. The project promotes economic security as unimpeded access to transportation routes allows community members to maintain or seek employment and patronize local businesses.

Describe how the proposed project is consistent with local and regional planning efforts to effect disaster mitigation: The proposed mitigation effort, modification to the identified roadway segments to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: "Goal 1: Minimize loss of life, injury,

damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards " (p.270)

Further, the plan also includes a project specific to the Bacliff area of Galveston County which the proposed road improvements to the Bacliff area included in this application would complement. Mitigation action 2022-Galveston County 0-12 on p. 330 of the plan states "Problem: The Bacliff area of Galveston County has storm water restrictions due to a bowl effect of the surrounding state highways (SH 146, SH 646 Grand Ave) and high elevation bluff along Galveston Bay. Solution: Improve channel drains and culvert crossing thru the State Highways."

The proposed mitigation activity is also in concert with the goals of the Texas Water Development Board's 2024 Texas Flood Plan which includes roadway safety and early warning system goals. The plan notes "This includes goals to improve safety at low water crossings, improve the level of service for exposed roadway segments, and increase the implementation of flood early warning systems for roadways and flood prone areas" (p.183). Further, the roadway improvements in the Bacliff and San Leon areas would complement Project #0611000436 on p. 31 of Volume II of the 2024 Texas State Flood Plan, which is an analysis of roadside ditch and driveway improvements in Bacliff and San Leon.

Was a cost-benefit analysis used in the selection of the proposed project? Yes

Describe how the proposed project impacts vulnerable populations in the local community.: Either the entire census block or a substantial portion of the census block consists of low to moderate income persons, which are vulnerable solely based on their socio-economic status. Replacing the roadway segments with a more durable flood-resistant material will enable residents to more readily access evacuation routes during inclement weather events and places of employment and community service providers on a daily basis.

Describe how the proposed project creates economic opportunities for the local community: Either the entire census block or a substantial portion of the census block consists of low to moderate income persons, which are vulnerable solely based on their socio-economic status. Replacing the roadway segments with a more durable flood-resistant material will enable residents to more readily access evacuation routes during inclement weather events and places of employment and community service providers on a daily basis.

Does this project disproportionately impact vulnerable populations in the local community? No

Does the proposed project align with investments from other state or local capital improvements and infrastructure development efforts? Yes

Does the proposed project employ adaptable and reliable technology to guard against premature obsolescence? Yes

Describe the applicant's overall mitigation plan and how the project addressed in this application furthers that plan: The proposed mitigation effort, modification to the identified roadway segments to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: "Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards " (p.270)

Further, the plan also includes a project specific to the Bacliff area of Galveston County which the proposed road improvements to the Bacliff area included in this application would complement. Mitigation action 2022-Galveston County 0-12 on p. 330 of the plan states “Problem: The Bacliff area of Galveston County has storm water restrictions due to a bowl effect of the surrounding state highways (SH 146, SH 646 Grand Ave) and high elevation bluff along Galveston Bay. Solution: Improve channel drains and culvert crossing thru the State Highways.”

Describe how the proposed project will contribute to the community's resiliency against future disasters as a result of these projects: Replacing the asphalt roadway segment with concrete will mitigate against future risk by minimizing the impacts of excessive coastal storm surge and runoff, negating the creation of urban heat islands, and ensuring residents are able to travel unimpeded to the nearest identified evacuation route should hurricane force winds and accompanying rain be forecasted.

Bacliff -Miller Street Improvements

Project Info

Project Information

DRGR Activity: Street Improvements

Project Type: Street Improvements

Project Title: Bacliff -Miller Street Improvements

Does this project include replacement or relocation of a facility (i.e., lift station, water treatment plant, etc.)? No

Provide a detailed description of the scope of work proposed. For proposed work involving a length of road, ditch, channel, etc., report the scope of the project in linear feet (lf): Bacliff, Texas runs along the Houston Ship channel with commerce and oil and gas production traversing the Highway 146 corridor between the Port of Houston and the refineries/plants of Texas City including multiple Marathon locations, Valero, Advario, Rosefield, and Eastman. Bacliff's proximity to Highway 146 includes it in the communities that create a hub for business, trade, tourism, recreational opportunities and one of the nation's largest energy production corridors between Pasadena and Texas City.

Bacliff is geographically situated directly between Galveston Bay to the east and Highway 146 to the west creating a bowl effect where storm water collects and is slow to drain due to outdated and inefficient drainage infrastructure. The County of Galveston contacted the local National Weather Service (NWS) office to request the number of flash flooding events which have impacted Bacliff. The NWS accessed NOAA's National Centers for Environmental Information and noted having issued 21 flash flood warnings between 5/12/22 and 9/15/23. Six of these warnings resulted in flooding which caused property damage. Notable events include Hurricane Harvey in August of 2017, which resulted in $4,000,000 in damages to the Bayview neighborhood in Bacliff and a rainfall event on June 4, 2021, which flooded 100 homes and caused $500,000 in property damage in the Bacliff community.

The current drainage system in the Bacliff neighborhoods was designed and constructed in the mid 1900's when many of the homes were built with no requirements for the inclusion of impervious surfaces and retainage ponds to lower the impact of heavy rainfall events. Over the last 40 years, private homes along the bay have increased in size and value with an increased need for elevated foundations, which contributes to the bowl effect of the inner neighborhoods of the Bacliff community. In addition, an exponential increase in business development along Highway 146 with increased impervious surface for foundations and large parking lots along with the ever-increasing elevation of the highway have further exasperated the flooding problems of the Bacliff area. In response to the Bacliff's identified flood risk, this flood resistant street improvement entails the replacement of 502 LF of existing asphalt roadway with 502 LF of more durable concrete pavement from the intersection of Miller Street and Jackson Avenue to the intersection of Miller Street and Baker Avenue (Start: 29.503167, -94.995667. Midpoint: 29.503611, -94.996083; End: 29.338111, -94.964306).

Once design and engineering are complete and required permits received, equipment, materials, and personnel will be mobilized to the site. The roadway will be closed to traffic and the existing asphalt road surface and base material will be removed using a stabilizer/reclaimer. The subbase will then be stabilized with lime to reduce the plasticity of the clay. The subbase will then be cured using a light fog spray of water or bituminous curing agent at a rate of 0.15 to 0.25 gal/yd2. If the construction contractor determines that trimming of the cement-treated subbase is unavoidable, just before paving, the surface will be treated to prevent bonding of the base to the surface. The applicable bond breakers may include reapplication of the bituminous curing agent with a thin layer of sand or the application of two coats of wax-based curing compound. The reinforced concrete pavement will then be formed and placed over the base and subbase. The concrete pavement will be six inches in uniform thickness, with 5.0 sacks of Portland Cement used per cubic yard and will be reinforced with #4 (1/2") deformed steel reinforcing bars spaced a maximum of 18" center to center each way. Once cured and tested, equipment, personnel and excess materials will be transported from the project site, and the roadway will be reopened to traffic.

Site: Project Site Title	Site: Street Address
Bacliff -Miller Street Improvements	Intersection of Miller Street and Jackson Avenue to the intersection of Miller Street and Baker Avenue Bacliff, TX, 77518

Describe a plan for the long-term funding and management of the operations and maintenance of the project: Galveston County Road and Bridge Department is responsible for maintaining this road segment. Lee Crowder is the road administrator and ultimately responsible for ensuring all county roads are operated and maintained appropriately. The department ensures the road surfaces are cleaned throughout the year, as conditions require, any identified cracks are sealed, and the road segment is resealed in its entirety as needed. The current county budget already accounts for expenditures to maintain all county roads, including this segment.

Which HUD national objective does the project meet? LMI

Describe activities that benefit low- and moderate-income people: The entire census block is comprised of low to moderate income people. Ensuring the roadway is accessible to local residents will enable timely travel to the nearest evacuation route should hurricane force winds/accompanying rain be forecasted.

Method(s) used to determine the beneficiaries: LMI Area Benefit

What method was used for Beneficiary Identification? Census (HUD LMISD)

Provide a brief description of the beneficiary identification method used to determine this national objective and upload supporting beneficiary maps, census data, and/or survey documents: The beneficiary population was determined through a geospatial analysis of the most recent census block data using the American Community Survey Summary File Retrieval Tool and ArcGIS.

U.S. Congressional District #: 14

Texas Representative District #: 23

Texas Senate District #: 11

Environmental

What is the current status of the project? Not yet begun

Will the assistance requested have any negative impact(s) or effect(s) on the environment? No

Is the proposed project likely to require an archaeological assessment? No

Is the proposed site(s) listed on the National Register of Historic Places? No

Is the project in a designated floodway or coastal high hazard area? No

Is the project in a designated special flood hazard area or a designated wetland? No

For projects in the 500 or 100-year floodplain: Does your project involve a critical action as defined in 24CFR55.2(b)(3)?

Is any project site located in a known critical habitat for endangered species? No

Is any project site a known hazardous site? No

Is any project site located on federal lands or at a federal installation? No

Is any project site subject to or participating in Fixing America's Surface Transportation Act (FAST-41) (P.L. 114-94)? No

What level of environmental review is likely needed for this project? Environmental Assessment

Provide any additional detail or information relevant to Environmental Review: Galveston County does not anticipate that the proposed project will have any negative environmental consequences as the activity (replacing asphalt with concrete) replaces an equal amount of material along the same amount of linear feet of existing roadway. No new ground disturbance will occur.

Provide a brief narrative regarding how CDBG-MIT funding is to be used. Demonstrate that HUD CDBG environmental requirements have been met to date:

Permits

Does the project require any federal, state, or other permits, approvals, or waivers to complete the proposed work? No

If yes, describe the type and purpose of each permit and its association with the proposed project. Provide a copy of each permit already executed:

Does the project require any type of ratified, legally binding agreement between the applicant and any other entity to provide continual operation upon completion? No

If yes, describe the type and purpose of each agreement and its association with the proposed project. Provide a copy of each agreement already executed or drafted:

For sewer and/or water facilities projects, does the applicant currently hold the Certificate of Convenience and Necessity (CCN) for the target area proposed in the application? (If not a sewer and/or water facilities project, please choose N/A): N/A

Budget Activity Lines

Program Budget Code	Planned/Requested Amount	Planned Other Funds Amount	Total	Percent of Total
Planning	$0.00	$0.00	$0.00	0%
Acquisition	$0.00	$0.00	$0.00	0%
Environmental	$0.00	$0.00	$0.00	0%
Special Environmental	$0.00	$0.00	$0.00	0%
Grant Administration	$4,418.35	$0.00	$4,418.35	4.8%
Engineering	$4,207.95	$0.00	$4,207.95	4.5%
Construction	$84,157.91	$0.00	$84,157.91	90.7%

Mitigation

Identify the specific risk the proposed project will mitigate against: Severe Coastal Flooding

Describe as to how the proposed project addresses/mitigates against the current and future risks identified: Replacing the asphalt roadway segment with concrete will mitigate against current and future risk by minimizing the impacts of excessive coastal storm surge and runoff, negating the creation of urban heat islands, and ensuring residents' access to a community lifeline which facilitates travel to the nearest identified evacuation route should hurricane force winds and accompanying rain be forecasted. The chosen construction material will be more resilient for the following reasons:

•Concrete is more resistant to heavy rainfall and flooding. Unlike asphalt which can deteriorate quickly when exposed to water, concrete remains stable and intact, reduction the need for frequent repairs and ensuring safer road conditions.

•Concrete's ability to reflect sunlight helps it remain cooler than asphalt, which absorbs and retains heat. With its higher albedo, concrete reflects more sunlight than asphalt, which absorbs heat. This property helps to keep urban areas cooler, combating the urban heat island effect.

•From an environmental perspective, concrete production emits fewer greenhouse gases compared to asphalt. Moreover, concrete can be recycled and reused in new construction projects, minimizing environmental impact and promoting sustainability.

•Concrete is less prone to rutting and deformation under heavy loads and high temperatures with a superior load-bearing capacity. This resistance ensures a more consistent and safer driving surface, reducing the risk of vehicle damage and accidents.

•Concrete streets boast a significantly longer lifespan than their asphalt counterparts. Typically, concrete roads can last between 20 to 40 years with minimal maintenance, whereas asphalt streets often require resurfacing and repairs every 10 to 15 years. This longevity makes concrete a cost-effective option in the long run.

Provide information about how the proposed mitigation efforts integrate into the community's emergency and resiliency plans: The proposed mitigation efforts, modification to the identified roadway segments to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: “Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards “ (p.270)

The proposed mitigation activity is also in concert with the goals of the Texas Water Development Board’s 2024 Texas Flood Plan which includes roadway safety and early warning system goals. The plan notes “This includes goals to improve safety at low water crossings, improve the level of service for exposed roadway segments, and increase the implementation of flood early warning systems for roadways and flood prone areas” (p.183). In addition, significant damage to the roadway segments would impede residents from being able to access the

nearest hurricane evacuation route per Galveston County's Hurricane Evacuation Mapping (Houston-Galveston Area Council-Hurricane Evacuation | Galveston, TX - Official Website).

In the space provided, list documentation provided to support the identification of the threat or hazard and how it relates to potential impact: The hazard was identified through consultation with the national weather service, a review of the NOAA storm events database, and review of the risk assessment within the hazard mitigation plan. The national weather service issued 21 flash flood warnings between 5/2012 and 9/2023 which resulted in over $4M in property damages according to the Office of Emergency Management.

See the 2022 Galveston County Hazard Mitigation Plan; the 2024 Texas Flood Plan; and the Galveston County's Hurricane Evacuation Plan (mapping).

Provide a brief description of how the proposed project addresses an integrated approach to mitigation: This project demonstrates an integrated approach towards mitigation as the county takes part in local and regional planning efforts and considered this project within the context of those planning efforts to determine if the project was in concert with both local and mitigation goals, objectives and strategies. This was accomplished by considering a number of factors/indicators as the project was developed including local and regional community acceptance of the project; effects on local and regional populations; technical feasibility and secondary local and regional impacts; the degree of local and regional public and political support for the project; existing local and regional legal authorities; costs, benefits, and the project's contribution to the local and regional economy; and existing local and regional environmental laws, regulations and ordinances.

Considering the local evaluation of hazard risks, responsible floodplain management, future extreme weather/natural disaster events, and long-term risks, describe how the proposed project promotes sustainable community resilience: The project promotes sustainable community resilience as it affords unimpeded access to a critical community lifeline, transportation. This segment of roadway is a part of the overarching county and regional transportation infrastructure. Transportation, as with other community lifelines, enables the continuous operation of critical government and business functions and is essential to human health and safety or economic security. Unimpeded access to this community lifeline has the potential to save lives by facilitating first responder's egress and ingress to homes within the community and community members' access to emergency evacuation routes should hurricane force winds and rains be forecasted. The project promotes economic security as unimpeded access to transportation routes allows community members to maintain or seek employment and patronize local businesses.

Describe how the proposed project is consistent with local and regional planning efforts to effect disaster mitigation: The proposed mitigation effort, modification to the identified roadway segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: "Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards " (p.270)

Further, the plan also includes a project specific to the Bacliff area of Galveston County which the proposed road improvements to the Bacliff area included in this application would

complement. Mitigation action 2022-Galveston County 0-12 on p. 330 of the plan states "Problem: The Bacliff area of Galveston County has storm water restrictions due to a bowl effect of the surrounding state highways (SH 146, SH 646 Grand Ave) and high elevation bluff along Galveston Bay. Solution: Improve channel drains and culvert crossing thru the State Highways."

The proposed mitigation activity is also in concert with the goals of the Texas Water Development Board's 2024 Texas Flood Plan which includes roadway safety and early warning system goals. The plan notes "This includes goals to improve safety at low water crossings, improve the level of service for exposed roadway segments, and increase the implementation of flood early warning systems for roadways and flood prone areas" (p.183). Further, the roadway improvements in the Bacliff and San Leon areas would complement Project #0611000436 on p. 31 of Volume II of the 2024 Texas State Flood Plan, which is an analysis of roadside ditch and driveway improvements in Bacliff and San Leon.

Was a cost-benefit analysis used in the selection of the proposed project? Yes

Describe how the proposed project impacts vulnerable populations in the local community.: Either the entire census block or a substantial portion of the census block consists of low to moderate income persons, which are vulnerable solely based on their socio-economic status. Replacing the roadway segments with a more durable flood-resistant material will enable residents to more readily access evacuation routes during inclement weather events and places of employment and community service providers on a daily basis.

Describe how the proposed project creates economic opportunities for the local community: The project in and of itself does not create economic opportunities, but it does facilitate access to economic opportunities by enabling residents to be able to travel to their places of employment (employed residents) or potential places of employment (jobseekers). Further, residents will be able to continue to frequent local businesses including gas stations, grocery stores, restaurants, and other small locally owned businesses which rely on their customer bases to remain solvent and drive the local economy.

Does this project disproportionately impact vulnerable populations in the local community? No

Does the proposed project align with investments from other state or local capital improvements and infrastructure development efforts? Yes

Does the proposed project employ adaptable and reliable technology to guard against premature obsolescence? Yes

Describe the applicant's overall mitigation plan and how the project addressed in this application furthers that plan: The proposed mitigation effort, modification to the identified roadway segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: "Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards " (p.270)

Further, the plan also includes a project specific to the Bacliff area of Galveston County which the proposed road improvements to the Bacliff area included in this application would complement. Mitigation action 2022-Galveston County 0-12 on p. 330 of the plan states "Problem: The Bacliff area of Galveston County has storm water restrictions due to a bowl effect of the surrounding state highways (SH 146, SH 646 Grand Ave) and high elevation bluff along Galveston Bay. Solution: Improve channel drains and culvert crossing thru the State Highways."

Describe how the proposed project will contribute to the community's resiliency against future disasters as a result of these projects: Replacing the asphalt roadway segment with concrete will mitigate against future risk by minimizing the impacts of excessive coastal storm surge and runoff, negating the creation of urban heat islands, and ensuring residents are able to travel unimpeded to the nearest identified evacuation route should hurricane force winds and accompanying rain be forecasted.

Bacliff-Smith Street Improvements

Project Info

Project Information

DRGR Activity: Street Improvements

Project Type: Street Improvements

Project Title: Bacliff-Smith Street Improvements

Does this project include replacement or relocation of a facility (i.e., lift station, water treatment plant, etc.)? No

Provide a detailed description of the scope of work proposed. For proposed work involving a length of road, ditch, channel, etc., report the scope of the project in linear feet (lf): Bacliff, Texas runs along the Houston Ship channel with commerce and oil and gas production traversing the Highway 146 corridor between the Port of Houston and the refineries/plants of Texas City including multiple Marathon locations, Valero, Advario, Rosefield, and Eastman. Bacliff's proximity to Highway 146 includes it in the communities that create a hub for business, trade, tourism, recreational opportunities and one of the nation's largest energy production corridors between Pasadena and Texas City.

Bacliff is geographically situated directly between Galveston Bay to the east and Highway 146 to the west creating a bowl effect where storm water collects and is slow to drain due to outdated and inefficient drainage infrastructure. The County of Galveston contacted the local National Weather Service (NWS) office to request the number of flash flooding events which have impacted Bacliff. The NWS accessed NOAA's National Centers for Environmental Information and noted having issued 21 flash flood warnings between 5/12/12 and 9/15/23. Six of these warnings resulted in flooding which caused property damage. Notable events include Hurricane Harvey in August of 2017, which resulted in $4,000,000 in damages to the Bayview neighborhood in Bacliff and a rainfall event on June 4, 2021, which flooded 100 homes and caused $500,000 in property damage in the Bacliff community.

The current drainage system in the Bayview neighborhood was designed and constructed in the mid 1900's when many of the homes were built with no requirements for the inclusion of impervious surfaces and retainage ponds to lower the impact of heavy rainfall events. Over the last 40 years, private homes along the bay have increased in size and value with an increased need for elevated foundations, which contributes to the bowl effect of the inner neighborhoods of the Bacliff community. In addition, an exponential increase in business development along Highway 146 with increased impervious surface for foundations and large parking lots along with the ever-increasing elevation of the highway have further exasperated the flooding problems of the Bacliff area.

In response to the Bacliff's identified flood risk, this flood resistant street improvement entails the replacement of 505 LF of existing asphalt roadway with 505 LF of more durable concrete pavement from the intersection of Smith Street & Jackson Ave to intersection of Smith Street & Baker Ave (Start: 29.502722, -94.996306; Midpoint: 29.503139, -94.996639; End: 29.503528, -94.997139) Once design and engineering are complete and required permits received,

equipment, materials, and personnel will be mobilized to the site. The roadway will be closed to traffic and the existing asphalt road surface and base material will be removed using a stabilizer/reclaimer. The subbase will then be stabilized with lime to reduce the plasticity of the clay. The subbase will then be cured using a light fog spray of water or bituminous curing agent at a rate of 0.15 to 0.25 gal/yd2. If the construction contractor determines that trimming of the cement-treated subbase is unavoidable, just before paving, the surface will be treated to prevent bonding of the base to the surface. The applicable bond breakers may include reapplication of the bituminous curing agent with a thin layer of sand or the application of two coats of wax-based curing compound. The reinforced concrete pavement will then be formed and placed over the base and subbase. The concrete pavement will be six inches in uniform thickness, with 5.0 sacks of Portland Cement used per cubic yard and will be reinforced with #4 (1/2") deformed steel reinforcing bars spaced a maximum of 18" center to center each way. Once cured and tested, equipment, personnel and excess materials will be transported from the project site, and the roadway will be reopened to traffic.

Site: Project Site Title	Site: Street Address
Bacliff - Smith Street Improvements	Bacliff, Smith St

Describe a plan for the long-term funding and management of the operations and maintenance of the project: Galveston County Road and Bridge Department is responsible for maintaining this road segment. Lee Crowder is the road administrator and ultimately responsible for ensuring all county roads are operated and maintained appropriately. The department ensures the road surfaces are cleaned throughout the year, as conditions require, any identified cracks are sealed, and the road segment is resealed in its entirety as needed. The current county budget already accounts for expenditures to maintain all county roads, including this segment.

Total proposed number of linear feet: 505

Total number of proposed public facilities:

Project Phase	Start Date	End Date	Length (in months)

American Indian/Alaskan Native/Black African American	0	0	0

Race	Hispanic Population	Non-Hispanic Population	Total Population
American Indian/Alaskan Native	30	26	56

Which HUD national objective does the project meet? LMI

Describe activities that benefit low- and moderate-income people: The entire census block is comprised of low to moderate income people. Ensuring the roadway is accessible to local residents will enable timely travel to the nearest evacuation route should hurricane force winds/accompanying rain be forecasted.

Method(s) used to determine the beneficiaries: LMI Area Benefit

What method was used for Beneficiary Identification? Census (HUD LMISD)

Provide a brief description of the beneficiary identification method used to determine this national objective and upload supporting beneficiary maps, census data, and/or survey documents: The beneficiary population was determined through a geospatial analysis of the most recent census block data using the American Community Survey Summary File Retrieval Tool and ArcGIS.

U.S. Congressional District #: 14

Texas Representative District #: 23

Texas Senate District #: 11

Environmental

What is the current status of the project? Not yet begun

Will the assistance requested have any negative impact(s) or effect(s) on the environment? No

Is the proposed project likely to require an archaeological assessment? No

Is the proposed site(s) listed on the National Register of Historic Places? No

Is the project in a designated floodway or coastal high hazard area? No

Is the project in a designated special flood hazard area or a designated wetland? No

For projects in the 500 or 100-year floodplain: Does your project involve a critical action as defined in 24CFR55.2(b)(3)?

Is any project site located in a known critical habitat for endangered species? No

Is any project site a known hazardous site? No

Is any project site located on federal lands or at a federal installation? No

Is any project site subject to or participating in Fixing America's Surface Transportation Act (FAST-41) (P.L. 114-94)? No

What level of environmental review is likely needed for this project? Environmental Assessment

Provide any additional detail or information relevant to Environmental Review: Galveston County does not anticipate that the proposed project will have any negative environmental consequences as the activity (replacing asphalt with concrete) replaces an equal amount of material along the same amount of linear feet of existing roadway. No new ground disturbance will occur.

Provide a brief narrative regarding how CDBG-MIT funding is to be used. Demonstrate that HUD CDBG environmental requirements have been met to date:

Permits

Does the project require any federal, state, or other permits, approvals, or waivers to complete the proposed work? No

If yes, describe the type and purpose of each permit and its association with the proposed project. Provide a copy of each permit already executed:

Does the project require any type of ratified, legally binding agreement between the applicant and any other entity to provide continual operation upon completion? No

If yes, describe the type and purpose of each agreement and its association with the proposed project. Provide a copy of each agreement already executed or drafted:

For sewer and/or water facilities projects, does the applicant currently hold the Certificate of Convenience and Necessity (CCN) for the target area proposed in the application? (If not a sewer and/or water facilities project, please choose N/A): N/A

Mitigation

Identify the specific risk the proposed project will mitigate against: Severe Coastal Flooding

Describe as to how the proposed project addresses/mitigates against the current and future risks identified: Replacing the asphalt roadway segment with concrete will mitigate against current and future risk by minimizing the impacts of excessive coastal storm surge and runoff, negating the creation of urban heat islands, and ensuring residents' access to a community lifeline which facilitates travel to the nearest identified evacuation route should hurricane force winds and accompanying rain be forecasted. The chosen construction material will be more resilient for the following reasons:

•Concrete is more resistant to heavy rainfall and flooding. Unlike asphalt which can deteriorate quickly when exposed to water, concrete remains stable and intact, reduction the need for frequent repairs and ensuring safer road conditions.

•Concrete's ability to reflect sunlight helps it remain cooler than asphalt, which absorbs and retains heat. With its higher albedo, concrete reflects more sunlight than asphalt, which absorbs heat. This property helps to keep urban areas cooler, combating the urban heat island effect.

•From an environmental perspective, concrete production emits fewer greenhouse gases compared to asphalt. Moreover, concrete can be recycled and reused in new construction projects, minimizing environmental impact and promoting sustainability.

•Concrete is less prone to rutting and deformation under heavy loads and high temperatures with a superior load-bearing capacity. This resistance ensures a more consistent and safer driving surface, reducing the risk of vehicle damage and accidents.

•Concrete streets boast a significantly longer lifespan than their asphalt counterparts. Typically, concrete roads can last between 20 to 40 years with minimal maintenance, whereas asphalt streets often require resurfacing and repairs every 10 to 15 years. This longevity makes concrete a cost-effective option in the long run.

Provide information about how the proposed mitigation efforts integrate into the community's emergency and resiliency plans: The proposed mitigation effort, modification to the identified roadway segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: “Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards “ (p.270)

The proposed mitigation activity is also in concert with the goals of the Texas Water Development Board’s 2024 Texas Flood Plan which includes roadway safety and early warning system goals. The plan notes “This includes goals to improve safety at low water crossings, improve the level of service for exposed roadway segments, and increase the implementation of flood early warning systems for roadways and flood prone areas” (p.183). Further, the roadway improvements in the Bacliff and San Leon areas would complement Project #0611000436 on p.

31 of Volume II of the 2024 Texas State Flood Plan, which is an analysis of roadside ditch and driveway improvements in Bacliff and San Leon.

In addition, significant damage to the roadway segments would impede residents from being able to access the nearest hurricane evacuation route per Galveston County's Hurricane Evacuation Mapping (Houston-Galveston Area Council-Hurricane Evacuation | Galveston, TX - Official Website).

See the 2022 Galveston County Hazard Mitigation Plan reference document, Texas Flood Plan reference document, and the Houston-Galveston Area Council's Evacuation Route documentation.

In the space provided, list documentation provided to support the identification of the threat or hazard and how it relates to potential impact: The hazard was identified through consultation with the national weather service, a review of the NOAA storm events database, and review of the risk assessment within the hazard mitigation plan. The national weather service issued 21 flash flood warnings between 5/2012 and 9/2023 which resulted in over $4M in property damages according to the Office of Emergency Management.

Provide a brief description of how the proposed project addresses an integrated approach to mitigation: This project demonstrates an integrated approach towards mitigation as the county takes part in local and regional planning efforts and considered this project within the context of those planning efforts to determine if the project was in concert with both local and mitigation goals, objectives and strategies. This was accomplished by considering a number of factors/indicators as the project was developed including local and regional community acceptance of the project; effects on local and regional populations; technical feasibility and secondary local and regional impacts; the degree of local and regional public and political support for the project; existing local and regional legal authorities; costs, benefits, and the project's contribution to the local and regional economy; and existing local and regional environmental laws, regulations and ordinances.

Considering the local evaluation of hazard risks, responsible floodplain management, future extreme weather/natural disaster events, and long-term risks, describe how the proposed project promotes sustainable community resilience: The project promotes sustainable community resilience as it affords unimpeded access to a critical community lifeline, transportation. This segment of roadway is a part of the overarching county and regional transportation infrastructure. Transportation, as with other community lifelines, enables the continuous operation of critical government and business functions and is essential to human health and safety or economic security. Unimpeded access to this community lifeline has the potential to save lives by facilitating first responder's egress and ingress to homes within the community and community members' access to emergency evacuation routes should hurricane force winds and rains be forecasted. The project promotes economic security as unimpeded access to transportation routes allows community members to maintain or seek employment and patronize local businesses.

Describe how the proposed project is consistent with local and regional planning efforts to effect disaster mitigation: The proposed mitigation effort, modification to the identified roadway segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: "Goal 1: Minimize loss of life, injury,

damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards " (p.270)

Further, the plan also includes a project specific to the Bacliff area of Galveston County which the proposed road improvements to the Bacliff area included in this application would complement. Mitigation action 2022-Galveston County 0-12 on p. 330 of the plan states "Problem: The Bacliff area of Galveston County has storm water restrictions due to a bowl effect of the surrounding state highways (SH 146, SH 646 Grand Ave) and high elevation bluff along Galveston Bay. Solution: Improve channel drains and culvert crossing thru the State Highways."

The proposed mitigation activity is also in concert with the goals of the Texas Water Development Board's 2024 Texas Flood Plan which includes roadway safety and early warning system goals. The plan notes "This includes goals to improve safety at low water crossings, improve the level of service for exposed roadway segments, and increase the implementation of flood early warning systems for roadways and flood prone areas" (p.183). Further, the roadway improvements in the Bacliff and San Leon areas would complement Project #0611000436 on p. 31 of Volume II of the 2024 Texas State Flood Plan, which is an analysis of roadside ditch and driveway improvements in Bacliff and San Leon.

Was a cost-benefit analysis used in the selection of the proposed project? Yes

Describe how the proposed project impacts vulnerable populations in the local community.: Either the entire census block or a substantial portion of the census block consists of low to moderate income persons, which are vulnerable solely based on their socio-economic status. Replacing the roadway segments with a more durable flood-resistant material will enable residents to more readily access evacuation routes during inclement weather events and places of employment and community service providers on a daily basis.

Describe how the proposed project creates economic opportunities for the local community: The project in and of itself does not create economic opportunities, but it does facilitate access to economic opportunities by enabling residents to be able to travel to their places of employment (employed residents) or potential places of employment (jobseekers). Further, residents will be able to continue to frequent local businesses including gas stations, grocery stores, restaurants, and other small locally owned businesses which rely on their customer bases to remain solvent and drive the local economy

Does this project disproportionately impact vulnerable populations in the local community? No

Does the proposed project align with investments from other state or local capital improvements and infrastructure development efforts? Yes

Does the proposed project employ adaptable and reliable technology to guard against premature obsolescence? Yes

Describe the applicant's overall mitigation plan and how the project addressed in this application furthers that plan: The proposed mitigation effort, modification to the identified roadway segments to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: "Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards " (p.270)

Further, the plan also includes a project specific to the Bacliff area of Galveston County which the proposed road improvements to the Bacliff area included in this application would complement. Mitigation action 2022-Galveston County 0-12 on p. 330 of the plan states "Problem: The Bacliff area of Galveston County has storm water restrictions due to a bowl effect of the surrounding state highways (SH 146, SH 646 Grand Ave) and high elevation bluff along Galveston Bay. Solution: Improve channel drains and culvert crossing thru the State Highways."

Describe how the proposed project will contribute to the community's resiliency against future disasters as a result of these projects: Replacing the asphalt roadway segment with concrete will mitigate against future risk by minimizing the impacts of excessive coastal storm surge and runoff, negating the creation of urban heat islands, and ensuring residents are able to travel unimpeded to the nearest identified evacuation route should hurricane force winds and accompanying rain be forecasted.

DRGR Activity: Street Improvements

Project Type: Street Improvements

Project Title: Bacliff-13th Street Improvements

Does this project include replacement or relocation of a facility (i.e., lift station, water treatment plant, etc.)? No

Provide a detailed description of the scope of work proposed. For proposed work involving a length of road, ditch, channel, etc., report the scope of the project in linear feet (lf): Bacliff, Texas runs along the Houston Ship channel with commerce and oil and gas production traversing the Highway 146 corridor between the Port of Houston and the refineries/plants of Texas City including multiple Marathon locations, Valero, Advario, Rosefield, and Eastman. Bacliff's proximity to Highway 146 includes it in the communities that create a hub for business, trade, tourism, recreational opportunities and one of the nation's largest energy production corridors between Pasadena and Texas City. Bacliff is geographically situated directly between Galveston Bay to the east and Highway 146 to the west creating a bowl effect where storm water collects and is slow to drain due to outdated and inefficient drainage infrastructure. The County of Galveston contacted the local National Weather Service (NWS) office to request the number of flash flooding events which have impacted Bacliff. The NWS accessed NOAA's National Centers for Environmental Information and noted having issued 21 flash flood warnings between 5/12/22 and 9/15/23. Six of these warnings resulted in flooding which caused property damage. Notable events include Hurricane Harvey in August of 2017, which resulted in $4,000,000 in damages to the Bayview neighborhood in Bacliff and a rainfall event on June 4, 2021, which flooded 100 homes and caused $500,000 in property damage in the Bacliff community.

The current drainage system in Bacliff was designed and constructed in the mid 1900's when many of the homes were built with no requirements for the inclusion of impervious surfaces and retainage ponds to lower the impact of heavy rainfall events. Over the last 40 years, private homes along the bay have increased in size and value with an increased need for elevated foundations, which contributes to the bowl effect of the inner neighborhoods of the Bacliff community. In addition, an exponential increase in business development along Highway 146 with increased impervious surface for foundations and large parking lots along with the ever-increasing elevation of the highway have further exasperated the flooding problems of the Bacliff area.

In response to the Bacliff's identified flood risk, this flood resistant street improvement entails the replacement of 1637 LF of existing asphalt roadway with 1637 LF of more durable concrete pavement from the intersection of 13th Street and Ave D to the intersection of 13th Street and Ave A in Bacliff, TX, a census designated place approximately 16 miles northwest of Galveston, Texas (Start Point: 29.502111, -94.988278; Midpoint: 29.503333, -94.989389; and End Point: 29.505167, -94.991056).

Once design and engineering are complete and required permits received, equipment, materials, and personnel will be mobilized to the site. The roadway will be closed to traffic and the existing asphalt road surface and base material will be removed using a stabilizer/reclaimer. The subbase will then be stabilized with lime to reduce the plasticity of the clay. The subbase will then be cured using a light fog spray of water or bituminous curing agent at a rate of 0.15 to 0.25 gal/yd2. If the construction contractor determines that trimming of the cement-treated subbase is unavoidable, just before paving, the surface will be treated to prevent bonding of the base to the surface. The applicable bond breakers may include reapplication of the bituminous curing agent with a thin layer of sand or the application of two coats of wax-based curing compound. The reinforced concrete pavement will then be formed and placed over the base and subbase. The concrete pavement will be six inches in uniform thickness, with 5.0 sacks of Portland Cement used per cubic yard and will be reinforced with #4 (1/2") deformed steel reinforcing bars spaced a maximum of 18" center to center each way. Once cured and tested, equipment, personnel and excess materials will be transported from the project site, and the roadway will be reopened to traffic.

Site: Project Site Title	Site: Street Address
Bacliff - 13th Street Improvements	13th Street, Bacliff, TX

Describe a plan for the long-term funding and management of the operations and maintenance of the project: Galveston County Road and Bridge Department is responsible for maintaining this road segment. Lee Crowder is the road administrator and ultimately responsible for ensuring all county roads are operated and maintained appropriately. The department ensures the road surfaces are cleaned throughout the year, as conditions require, any identified cracks are sealed, and the road segment is resealed in its entirety as needed. The current county budget already accounts for expenditures to maintain all county roads, including this segment.

Total proposed number of linear feet: 1,637

Total number of proposed public facilities:

National Objective

National Objective

Provide Total Number of Beneficiaries: 3,210

Provide number of LMI Beneficiaries 2,675

Percentage of LMI Beneficiaries: 83.33%

Is that applicant a HUD Exception Grantee? No

Census Tract	Block Group List (Text)
7,217	Group 1 ; Group 2 ; Group 3

Male: 1,653

Female: 1,557

Total: 3,210

Race	Hispanic Population	Non-Hispanic Population	Total Population
Black African American	0	52	52
Asian	15	96	111
Some Other Race	119	0	119
Other Multi-Racial	0	2	2
Native Hawaiian / Other Pacific Islander	0	0	0
American Indian/Alaskan Native/Black African American	0	0	0
American Indian/Alaskan Native	67	57	124
Black African American/White	13	80	93
Asian/White	0	0	0
American Indian/Alaskan Native/White	5	32	37

Race	Hispanic Population	Non-Hispanic Population	Total Population
White	916	1,756	2,672

Which HUD national objective does the project meet? LMI

Describe activities that benefit low- and moderate-income people: Most of the census block is comprised of low to moderate income people. Ensuring the roadway is accessible to local residents will enable timely travel to the nearest evacuation route should hurricane force winds/accompanying rain be forecasted.

Method(s) used to determine the beneficiaries: LMI Area Benefit

What method was used for Beneficiary Identification? Census (HUD LMISD)

Provide a brief description of the beneficiary identification method used to determine this national objective and upload supporting beneficiary maps, census data, and/or survey documents: The beneficiary population was determined through a geospatial analysis of the most recent census block data using the American Community Survey Summary File Retrieval Tool and ArcGIS.

U.S. Congressional District #: 14

Texas Representative District #: 23

Texas Senate District #: 11

Environmental

What is the current status of the project? Not yet begun

Will the assistance requested have any negative impact(s) or effect(s) on the environment? No

Is the proposed project likely to require an archaeological assessment? No

Is the proposed site(s) listed on the National Register of Historic Places? No

Is the project in a designated floodway or coastal high hazard area? No

Is the project in a designated special flood hazard area or a designated wetland? No

For projects in the 500 or 100-year floodplain: Does your project involve a critical action as defined in 24CFR55.2(b)(3)?

Is any project site located in a known critical habitat for endangered species? No

Is any project site a known hazardous site? No

Is any project site located on federal lands or at a federal installation? No

Is any project site subject to or participating in Fixing America's Surface Transportation Act (FAST-41) (P.L. 114-94)? No

What level of environmental review is likely needed for this project? Exempt

Provide any additional detail or information relevant to Environmental Review: Galveston County does not anticipate that the proposed project will have any negative environmental consequences as the activity (replacing asphalt with concrete) replaces an equal amount of material along the same amount of linear feet of existing roadway. No new ground disturbance will occur.

Provide a brief narrative regarding how CDBG-MIT funding is to be used. Demonstrate that HUD CDBG environmental requirements have been met to date:

Permits

Does the project require any federal, state, or other permits, approvals, or waivers to complete the proposed work? No

If yes, describe the type and purpose of each permit and its association with the proposed project. Provide a copy of each permit already executed:

Does the project require any type of ratified, legally binding agreement between the applicant and any other entity to provide continual operation upon completion? No

If yes, describe the type and purpose of each agreement and its association with the proposed project. Provide a copy of each agreement already executed or drafted:

For sewer and/or water facilities projects, does the applicant currently hold the Certificate of Convenience and Necessity (CCN) for the target area proposed in the application? (If not a sewer and/or water facilities project, please choose N/A): N/A

Budget Activity Lines

Program Budget Code	Planned/Requested Amount	Planned Other Funds Amount	Total	Percent of Total
Planning	$0.00	$0.00	$0.00	0%
Acquisition	$0.00	$0.00	$0.00	0%
Environmental	$0.00	$0.00	$0.00	0%

Engineering	$13,614.32	$0.00	$13,614.32	4.5%
Construction	$272,201.85	$0.00	$272,201.85	90.7%

Mitigation

Identify the specific risk the proposed project will mitigate against: Severe Coastal Flooding

Describe as to how the proposed project addresses/mitigates against the current and future risks identified: Replacing the asphalt roadway segment with concrete will mitigate against current and future risk by minimizing the impacts of excessive coastal storm surge and runoff, negating the creation of urban heat islands, and ensuring residents' access to a community lifeline which facilitates travel to the nearest identified evacuation route should hurricane force winds and accompanying rain be forecasted. The chosen construction material will be more resilient for the following reasons:

•Concrete is more resistant to heavy rainfall and flooding. Unlike asphalt which can deteriorate quickly when exposed to water, concrete remains stable and intact, reduction the need for frequent repairs and ensuring safer road conditions.

•Concrete's ability to reflect sunlight helps it remain cooler than asphalt, which absorbs and retains heat. With its higher albedo, concrete reflects more sunlight than asphalt, which absorbs heat. This property helps to keep urban areas cooler, combating the urban heat island effect.

•From an environmental perspective, concrete production emits fewer greenhouse gases compared to asphalt. Moreover, concrete can be recycled and reused in new construction projects, minimizing environmental impact and promoting sustainability.

•Concrete is less prone to rutting and deformation under heavy loads and high temperatures with a superior load-bearing capacity. This resistance ensures a more consistent and safer driving surface, reducing the risk of vehicle damage and accidents.

•Concrete streets boast a significantly longer lifespan than their asphalt counterparts. Typically, concrete roads can last between 20 to 40 years with minimal maintenance, whereas asphalt streets often require resurfacing and repairs every 10 to 15 years. This longevity makes concrete a cost-effective option in the long run.

Provide information about how the proposed mitigation efforts integrate into the community's emergency and resiliency plans: The proposed mitigation effort, modification to the identified roadway segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: “Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards “ (p.270)

The proposed mitigation activity is also in concert with the goals of the Texas Water Development Board’s 2024 Texas Flood Plan which includes roadway safety and early warning system goals. The plan notes “This includes goals to improve safety at low water crossings, improve the level of service for exposed roadway segments, and increase the implementation of flood early warning systems for roadways and flood prone areas” (p.183). Further, the roadway improvements in the Bacliff and San Leon areas would complement Project #0611000436 on p.

31 of Volume II of the 2024 Texas State Flood Plan, which is an analysis of roadside ditch and driveway improvements in Bacliff and San Leon.

In addition, significant damage to the roadway segments would impede residents from being able to access and abide by local evacuation plans, thereby increasing the risk of injury or death as a result of non-compliance. Per Galveston County's Hurricane Evacuation Mapping (Houston-Galveston Area Council-Hurricane Evacuation | Galveston, TX - Official Website) HWY 146 is the primary evacuation route during an emergency. Residents who are unable to use this roadway segment would be limited in their ability to access evacuation routes or emergency medical care during blue sky days.

See the 2022 Galveston County Hazard Mitigation Plan reference document, Texas Flood Plan reference document, and the Houston-Galveston Area Council's Evacuation Route documentation.

In the space provided, list documentation provided to support the identification of the threat or hazard and how it relates to potential impact: The hazard was identified through consultation with the national weather service, a review of the NOAA storm events database, and review of the risk assessment within the hazard mitigation plan. The national weather service issued 21 flash flood warnings between 5/2012 and 9/2023 which resulted in over $4M in property damages according to the Office of Emergency Management.

Provide a brief description of how the proposed project addresses an integrated approach to mitigation: This project demonstrates an integrated approach towards mitigation as the county takes part in local and regional planning efforts and considered this project within the context of those planning efforts to determine if the project was in concert with both local and mitigation goals, objectives and strategies. This was accomplished by considering a number of factors/indicators as the project was developed including local and regional community acceptance of the project; effects on local and regional populations; technical feasibility and secondary local and regional impacts; the degree of local and regional public and political support for the project; existing local and regional legal authorities; costs, benefits, and the project's contribution to the local and regional economy; and existing local and regional environmental laws, regulations and ordinances.

Considering the local evaluation of hazard risks, responsible floodplain management, future extreme weather/natural disaster events, and long-term risks, describe how the proposed project promotes sustainable community resilience: The project promotes sustainable community resilience as it affords unimpeded access to a critical community lifeline, transportation. This segment of roadway is a part of the overarching county and regional transportation infrastructure. Transportation, as with other community lifelines, enables the continuous operation of critical government and business functions and is essential to human health and safety or economic security. Unimpeded access to this community lifeline has the potential to save lives by facilitating first responder's egress and ingress to homes within the community and community members' access to emergency evacuation routes should hurricane force winds and rains be forecasted. The project promotes economic security as unimpeded access to transportation routes allows community members to maintain or seek employment and patronize local businesses.

Describe how the proposed project is consistent with local and regional planning efforts to effect disaster mitigation: The proposed mitigation effort, modification to the identified roadway

segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: “Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards “ (p.270)

Further, the plan also includes a project specific to the Bacliff area of Galveston County which the proposed road improvements to the Bacliff area included in this application would complement. Mitigation action 2022-Galveston County 0-12 on p. 330 of the plan states “Problem: The Bacliff area of Galveston County has storm water restrictions due to a bowl effect of the surrounding state highways (SH 146, SH 646 Grand Ave) and high elevation bluff along Galveston Bay. Solution: Improve channel drains and culvert crossing thru the State Highways.”

The proposed mitigation activity is also in concert with the goals of the Texas Water Development Board’s 2024 Texas Flood Plan which includes roadway safety and early warning system goals. The plan notes “This includes goals to improve safety at low water crossings, improve the level of service for exposed roadway segments, and increase the implementation of flood early warning systems for roadways and flood prone areas” (p.183). Further, the roadway improvements in the Bacliff and San Leon areas would complement Project #0611000436 on p. 31 of Volume II of the 2024 Texas State Flood Plan, which is an analysis of roadside ditch and driveway improvements in Bacliff and San Leon.

Was a cost-benefit analysis used in the selection of the proposed project? Yes

Describe how the proposed project impacts vulnerable populations in the local community.: Either the entire census block or a substantial portion of the census block consists of low to moderate income persons, which are vulnerable solely based on their socio-economic status. Replacing the roadway segments with a more durable flood-resistant material will enable residents to more readily access evacuation routes during inclement weather events and places of employment and community service providers on a daily basis.

Describe how the proposed project creates economic opportunities for the local community: The project in and of itself does not create economic opportunities, but it does facilitate access to economic opportunities by enabling residents to be able to travel to their places of employment (employed residents) or potential places of employment (jobseekers). Further, residents will be able to continue to frequent local businesses including gas stations, grocery stores, restaurants, and other small locally owned businesses which rely on their customer bases to remain solvent and drive the local economy.

Does this project disproportionately impact vulnerable populations in the local community? No

Does the proposed project align with investments from other state or local capital improvements and infrastructure development efforts? Yes

Does the proposed project employ adaptable and reliable technology to guard against premature obsolescence? Yes

Describe the applicant's overall mitigation plan and how the project addressed in this application furthers that plan: The proposed mitigation effort, modification to the identified roadway segments to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: “Goal 1: Minimize loss of life,

injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards “ (p.270)

Further, the plan also includes a project specific to the Bacliff area of Galveston County which the proposed road improvements to the Bacliff area included in this application would complement. Mitigation action 2022-Galveston County 0-12 on p. 330 of the plan states “Problem: The Bacliff area of Galveston County has storm water restrictions due to a bowl effect of the surrounding state highways (SH 146, SH 646 Grand Ave) and high elevation bluff along Galveston Bay. Solution: Improve channel drains and culvert crossing thru the State Highways.”

Describe how the proposed project will contribute to the community's resiliency against future disasters as a result of these projects: Replacing the asphalt roadway segment with concrete will mitigate against future risk by minimizing the impacts of excessive coastal storm surge and runoff, negating the creation of urban heat islands, and ensuring residents are able to travel unimpeded to the nearest identified evacuation route should hurricane force winds and accompanying rain be forecasted.

Bacliff-11th Street Improvements

Project Info

Project Information

DRGR Activity: Street Improvements

Project Type: Street Improvements

Project Title: Bacliff-11th Street Improvements

Does this project include replacement or relocation of a facility (i.e., lift station, water treatment plant, etc.)? No

Provide a detailed description of the scope of work proposed. For proposed work involving a length of road, ditch, channel, etc., report the scope of the project in linear feet (lf): Bacliff, Texas runs along the Houston Ship channel with commerce and oil and gas production traversing the Highway 146 corridor between the Port of Houston and the refineries/plants of Texas City including multiple Marathon locations, Valero, Advario, Rosefield, and Eastman. Bacliff's proximity to Highway 146 includes it in the communities that create a hub for business, trade, tourism, recreational opportunities and one of the nation's largest energy production corridors between Pasadena and Texas City.

Bacliff is geographically situated directly between Galveston Bay to the east and Highway 146 to the west creating a bowl effect where storm water collects and is slow to drain due to outdated and inefficient drainage infrastructure. The County of Galveston contacted the local National Weather Service (NWS) office to request the number of flash flooding events which have impacted Bacliff. The NWS accessed NOAA's National Centers for Environmental Information and noted having issued 21 flash flood warnings between 5/12/22 and 9/15/23. Six of these warnings resulted in flooding which caused property damage. Notable events include Hurricane Harvey in August of 2017, which resulted in $4,000,000 in damages to the Bayview neighborhood in Bacliff and a rainfall event on June 4, 2021, which flooded 100 homes and caused $500,000 in property damage in the Bacliff community.

The current drainage system in Bacliff was designed and constructed in the mid 1900's when many of the homes were built with no requirements for the inclusion of impervious surfaces and retainage ponds to lower the impact of heavy rainfall events. Over the last 40 years, private homes along the bay have increased in size and value with an increased need for elevated foundations, which contributes to the bowl effect of the inner neighborhoods of the Bacliff community. In addition, an exponential increase in business development along Highway 146 with increased impervious surface for foundations and large parking lots along with the ever-increasing elevation of the highway have further exasperated the flooding problems of the Bacliff area. In response to the Bacliff's identified flood risk, this flood resistant street improvement entails the replacement of 874 LF of existing asphalt roadway with 874 LF of more durable concrete pavement from the intersection of 11th Street and Avenue B to the intersection of 11th Street and Avenue D i (Start Point: 29.504806, -94.988222, Midpoint: 29.503917, -94.987444 and End Point: 29.503194, -94.986777).

Once design and engineering are complete and required permits received, equipment, materials, and personnel will be mobilized to the site. The roadway will be closed to traffic and the existing asphalt road surface and base material will be removed using a stabilizer/reclaimer. The subbase will then be stabilized with lime to reduce the plasticity of the clay. The subbase will then be cured using a light fog spray of water or bituminous curing agent at a rate of 0.15 to 0.25 gal/yd2. If the construction contractor determines that trimming of the cement-treated subbase is unavoidable, just before paving, the surface will be treated to prevent bonding of the base to the surface. The applicable bond breakers may include reapplication of the bituminous curing agent with a thin layer of sand or the application of two coats of wax-based curing compound. The reinforced concrete pavement will then be formed and placed over the base and subbase. The concrete pavement will be six inches in uniform thickness, with 5.0 sacks of Portland Cement used per cubic yard and will be reinforced with #4 (1/2") deformed steel reinforcing bars spaced a maximum of 18" center to center each way. Once cured and tested, equipment, personnel and excess materials will be transported from the project site, and the roadway will be reopened to traffic.

Mitigation

Identify the specific risk the proposed project will mitigate against: Severe Coastal Flooding

Describe as to how the proposed project addresses/mitigates against the current and future risks identified: Replacing the asphalt roadway segment with concrete will mitigate against current and future risk by minimizing the impacts of excessive coastal storm surge and runoff, negating the creation of urban heat islands, and ensuring residents' access to a community lifeline which facilitates travel to the nearest identified evacuation route should hurricane force winds and accompanying rain be forecasted. The chosen construction material will be more resilient for the following reasons:

•Concrete is more resistant to heavy rainfall and flooding. Unlike asphalt which can deteriorate quickly when exposed to water, concrete remains stable and intact, reduction the need for frequent repairs and ensuring safer road conditions.

•Concrete's ability to reflect sunlight helps it remain cooler than asphalt, which absorbs and retains heat. With its higher albedo, concrete reflects more sunlight than asphalt, which absorbs heat. This property helps to keep urban areas cooler, combating the urban heat island effect.

•From an environmental perspective, concrete production emits fewer greenhouse gases compared to asphalt. Moreover, concrete can be recycled and reused in new construction projects, minimizing environmental impact and promoting sustainability.

•Concrete is less prone to rutting and deformation under heavy loads and high temperatures with a superior load-bearing capacity. This resistance ensures a more consistent and safer driving surface, reducing the risk of vehicle damage and accidents.

•Concrete streets boast a significantly longer lifespan than their asphalt counterparts. Typically, concrete roads can last between 20 to 40 years with minimal maintenance, whereas asphalt streets often require resurfacing and repairs every 10 to 15 years. This longevity makes concrete a cost-effective option in the long run.

Provide information about how the proposed mitigation efforts integrate into the community's emergency and resiliency plans: The proposed mitigation efforts, modification to the identified roadway segments to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: “Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards “ (p.270)

The proposed mitigation activity is also in concert with the goals of the Texas Water Development Board’s 2024 Texas Flood Plan which includes roadway safety and early warning system goals. The plan notes “This includes goals to improve safety at low water crossings, improve the level of service for exposed roadway segments, and increase the implementation of flood early warning systems for roadways and flood prone areas” (p.183). Further, the roadway improvements in the Bacliff and San Leon areas would complement Project #0611000436 on p.

31 of Volume II of the 2024 Texas State Flood Plan, which is an analysis of roadside ditch and driveway improvements in Bacliff and San Leon.

In addition, significant damage to the roadway segments would impede residents from being able to access and abide by local evacuation plans, thereby increasing the risk of injury or death as a result of non-compliance. Per Galveston County's Hurricane Evacuation Mapping (Houston-Galveston Area Council-Hurricane Evacuation | Galveston, TX - Official Website) HWY 146 is the primary evacuation route during an emergency. Residents who are unable to use this roadway segment would be limited in their ability to access evacuation routes or emergency medical care during blue sky days.

See the 2022 Galveston County Hazard Mitigation Plan reference document, Texas Flood Plan reference document, and the Houston-Galveston Area Council's Evacuation Route documentation.

In the space provided, list documentation provided to support the identification of the threat or hazard and how it relates to potential impact: The hazard was identified through consultation with the national weather service, a review of the NOAA storm events database, and review of the risk assessment within the hazard mitigation plan. The national weather service issued 21 flash flood warnings between 5/2012 and 9/2023 which resulted in over $4M in property damages according to the Office of Emergency Management.

Provide a brief description of how the proposed project addresses an integrated approach to mitigation: This project demonstrates an integrated approach towards mitigation as the county takes part in local and regional planning efforts and considered this project within the context of those planning efforts to determine if the project was in concert with both local and mitigation goals, objectives and strategies. This was accomplished by considering a number of factors/indicators as the project was developed including local and regional community acceptance of the project; effects on local and regional populations; technical feasibility and secondary local and regional impacts; the degree of local and regional public and political support for the project; existing local and regional legal authorities; costs, benefits, and the project's contribution to the local and regional economy; and existing local and regional environmental laws, regulations and ordinances.

Considering the local evaluation of hazard risks, responsible floodplain management, future extreme weather/natural disaster events, and long-term risks, describe how the proposed project promotes sustainable community resilience: The project promotes sustainable community resilience as it affords unimpeded access to a critical community lifeline, transportation. This segment of roadway is a part of the overarching county and regional transportation infrastructure. Transportation, as with other community lifelines, enables the continuous operation of critical government and business functions and is essential to human health and safety or economic security. Unimpeded access to this community lifeline has the potential to save lives by facilitating first responder's egress and ingress to homes within the community and community members' access to emergency evacuation routes should hurricane force winds and rains be forecasted. The project promotes economic security as unimpeded access to transportation routes allows community members to maintain or seek employment and patronize local businesses.

Describe how the proposed project is consistent with local and regional planning efforts to effect disaster mitigation: The proposed mitigation effort, modification to the identified roadway

segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: “Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards “ (p.270)

Further, the plan also includes a project specific to the Bacliff area of Galveston County which the proposed road improvements to the Bacliff area included in this application would complement. Mitigation action 2022-Galveston County 0-12 on p. 330 of the plan states “Problem: The Bacliff area of Galveston County has storm water restrictions due to a bowl effect of the surrounding state highways (SH 146, SH 646 Grand Ave) and high elevation bluff along Galveston Bay. Solution: Improve channel drains and culvert crossing thru the State Highways.”

The proposed mitigation activitiy is also in concert with the goals of the Texas Water Development Board’s 2024 Texas Flood Plan which includes roadway safety and early warning system goals. The plan notes “This includes goals to improve safety at low water crossings, improve the level of service for exposed roadway segments, and increase the implementation of flood early warning systems for roadways and flood prone areas” (p.183). Further, the roadway improvements in the Bacliff and San Leon areas would complement Project #0611000436 on p. 31 of Volume II of the 2024 Texas State Flood Plan, which is an analysis of roadside ditch and driveway improvements in Bacliff and San Leon.

Was a cost-benefit analysis used in the selection of the proposed project? Yes

Describe how the proposed project impacts vulnerable populations in the local community.: Either the entire census block or a substantial portion of the census block consists of low to moderate income persons, which are vulnerable solely based on their socio-economic status. Replacing the roadway segments with a more durable flood-resistant material will enable residents to more readily access evacuation routes during inclement weather events and places of employment and community service providers on a daily basis.

Describe how the proposed project creates economic opportunities for the local community: The project in and of itself does not create economic opportunities, but it does facilitate access to economic opportunities by enabling residents to be able to travel to their places of employment (employed residents) or potential places of employment (jobseekers). Further, residents will be able to continue to frequent local businesses including gas stations, grocery stores, restaurants, and other small locally owned businesses which rely on their customer bases to remain solvent and drive the local economy.

Does this project disproportionately impact vulnerable populations in the local community? No

Does the proposed project align with investments from other state or local capital improvements and infrastructure development efforts? Yes

Does the proposed project employ adaptable and reliable technology to guard against premature obsolescence? Yes

Describe the applicant's overall mitigation plan and how the project addressed in this application furthers that plan: The proposed mitigation effort, modification to the identified roadway segments to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: “Goal 1: Minimize loss of life,

injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards “ (p.270)

Further, the plan also includes a project specific to the Bacliff area of Galveston County which the proposed road improvements to the Bacliff area included in this application would complement. Mitigation action 2022-Galveston County 0-12 on p. 330 of the plan states “Problem: The Bacliff area of Galveston County has storm water restrictions due to a bowl effect of the surrounding state highways (SH 146, SH 646 Grand Ave) and high elevation bluff along Galveston Bay. Solution: Improve channel drains and culvert crossing thru the State Highways.”

Describe how the proposed project will contribute to the community's resiliency against future disasters as a result of these projects: Replacing the asphalt roadway segment with concrete will mitigate against future risk by minimizing the impacts of excessive coastal storm surge and runoff, negating the creation of urban heat islands, and ensuring residents are able to travel unimpeded to the nearest identified evacuation route should hurricane force winds and accompanying rain be forecasted.

Bacliff-Gordy Street Improvements

Project Info

Project Information

DRGR Activity: Street Improvements

Project Type: Street Improvements

Project Title: Bacliff-Gordy Street Improvements

Does this project include replacement or relocation of a facility (i.e., lift station, water treatment plant, etc.)? No

Provide a detailed description of the scope of work proposed. For proposed work involving a length of road, ditch, channel, etc., report the scope of the project in linear feet (lf): Bacliff, Texas runs along the Houston Ship channel with commerce and oil and gas production traversing the Highway 146 corridor between the Port of Houston and the refineries/plants of Texas City including multiple Marathon locations, Valero, Advario, Rosefield, and Eastman. Bacliff's proximity to Highway 146 includes it in the communities that create a hub for business, trade, tourism, recreational opportunities and one of the nation's largest energy production corridors between Pasadena and Texas City. Bacliff is geographically situated directly between Galveston Bay to the east and Highway 146 to the west creating a bowl effect where storm water collects and is slow to drain due to outdated and inefficient drainage infrastructure. The County of Galveston contacted the local National Weather Service (NWS) office to request the number of flash flooding events which have impacted Bacliff. The NWS accessed NOAA's National Centers for Environmental Information and noted having issued 21 flash flood warnings between 5/12/22 and 9/15/23. Six of these warnings resulted in flooding which caused property damage. Notable events include Hurricane Harvey in August of 2017, which resulted in $4,000,000 in damages to the Bayview neighborhood in Bacliff and a rainfall event on June 4, 2021, which flooded 100 homes and caused $500,000 in property damage in the Bacliff community.

The current drainage system in the identified neighborhoods was designed and constructed in the mid 1900's when many of the homes were built with no requirements for the inclusion of impervious surfaces and retainage ponds to lower the impact of heavy rainfall events. Over the last 40 years, private homes along the bay have increased in size and value with an increased need for elevated foundations, which contributes to the bowl effect of the inner neighborhoods of the Bacliff community. In addition, an exponential increase in business development along Highway 146 with increased impervious surface for foundations and large parking lots along with the ever-increasing elevation of the highway have further exasperated the flooding problems of the Bacliff area.

In response to the Bacliff's identified flood risk, this flood resistant street improvement entails the replacement of 5,208 LF of existing asphalt roadway with 5,208 LF of more durable concrete pavement from the intersection of N Hwy 146 and Gordy Road to the intersection of Bayshore Drive and Gordy Road (Start: 29.508972, -94.000861; Midpoint: 29.513111, -94.994806; End: 29.516583).

Once design and engineering are complete and required permits received, equipment, materials, and personnel will be mobilized to the site. The roadway will be closed to traffic and the existing asphalt road surface and base material will be removed using a stabilizer/reclaimer. The subbase will then be stabilized with lime to reduce the plasticity of the clay. The subbase will then be cured using a light fog spray of water or bituminous curing agent at a rate of 0.15 to 0.25 gal/yd2. If the construction contractor determines that trimming of the cement-treated subbase is unavoidable, just before paving, the surface will be treated to prevent bonding of the base to the surface. The applicable bond breakers may include reapplication of the bituminous curing agent with a thin layer of sand or the application of two coats of wax-based curing compound. The reinforced concrete pavement will then be formed and placed over the base and subbase. The concrete pavement will be six inches in uniform thickness, with 5.0 sacks of Portland Cement used per cubic yard and will be reinforced with #4 (1/2") deformed steel reinforcing bars spaced a maximum of 18" center to center each way. Once cured and tested, equipment, personnel and excess materials will be transported from the project site, and the roadway will be reopened to traffic.

Site: Project Site Title	Site: Street Address
Bacliff- Gordy Street Improvements	Bacliff-Gordy Street
Bacliff-Gordy Steet Improvements	Gordy Street, Bacliff, Texas

Describe a plan for the long-term funding and management of the operations and maintenance of the project: Galveston County Road and Bridge Department is responsible for maintaining this road segment. Lee Crowder is the road administrator and ultimately responsible for ensuring all county roads are operated and maintained appropriately. The department ensures the road surfaces are cleaned throughout the year, as conditions require, any identified cracks are sealed, and the road segment is resealed in its entirety as needed. The current county budget already accounts for expenditures to maintain all county roads, including this segment.

Total proposed number of linear feet: 10,488

Total number of proposed public facilities:

National Objective

National Objective

Provide Total Number of Beneficiaries: 4,310

Provide number of LMI Beneficiaries 2,515

Percentage of LMI Beneficiaries: 58.35%

Is that applicant a HUD Exception Grantee? No

Census Tract	Block Group List (Text)
7,217	Group 2 ; Group 4 ; Group 5
7,216	Group 1 ; Group 4 ; Group 5

Male: 2,300

Female: 2,010

Total: 4,310

Race	Hispanic Population	Non-Hispanic Population	Total Population
Native Hawaiian / Other Pacific Islander	120	0	120
Asian/White	74	152	226
Black African American	158	150	308
Some Other Race	0	9	9
Other Multi-Racial	4	3	7
White	640	725	1,365

American Indian/Alaskan Native	18	40	58

Race	Hispanic Population	Non-Hispanic Population	Total Population
American Indian/Alaskan Native/White	1,450	525	1,975

Which HUD national objective does the project meet? LMI

Describe activities that benefit low- and moderate-income people: More than half of the census blocks are comprised of low to moderate income people. Ensuring the roadway is accessible to local residents will enable timely travel to the nearest evacuation route should hurricane force winds/accompanying rain be forecasted.

Method(s) used to determine the beneficiaries: LMI Area Benefit

What method was used for Beneficiary Identification? Census (HUD LMISD)

Provide a brief description of the beneficiary identification method used to determine this national objective and upload supporting beneficiary maps, census data, and/or survey documents: The beneficiary population was determined through a geospatial analysis of the most recent census block data using the American Community Survey Summary File Retrieval Tool and ArcGIS.

U.S. Congressional District #: 14

Texas Representative District #: 23

Texas Senate District #: 11

Environmental

What is the current status of the project? Not yet begun

Will the assistance requested have any negative impact(s) or effect(s) on the environment? No

Is the proposed project likely to require an archaeological assessment? No

Is the proposed site(s) listed on the National Register of Historic Places? No

Is the project in a designated floodway or coastal high hazard area? No

Is the project in a designated special flood hazard area or a designated wetland? No

For projects in the 500 or 100-year floodplain: Does your project involve a critical action as defined in 24CFR55.2(b)(3)?

Is any project site located in a known critical habitat for endangered species? No

Is any project site a known hazardous site? No

Is any project site located on federal lands or at a federal installation? No

Is any project site subject to or participating in Fixing America's Surface Transportation Act (FAST-41) (P.L. 114-94)? No

What level of environmental review is likely needed for this project? Environmental Assessment

Provide any additional detail or information relevant to Environmental Review: Galveston County does not anticipate that the proposed project will have any negative environmental consequences as the activity (replacing asphalt with concrete) replaces an equal amount of material along the same amount of linear feet of existing roadway. No new ground disturbance will occur.

Provide a brief narrative regarding how CDBG-MIT funding is to be used. Demonstrate that HUD CDBG environmental requirements have been met to date:

Permits

Does the project require any federal, state, or other permits, approvals, or waivers to complete the proposed work? No

If yes, describe the type and purpose of each permit and its association with the proposed project. Provide a copy of each permit already executed:

Does the project require any type of ratified, legally binding agreement between the applicant and any other entity to provide continual operation upon completion? No

If yes, describe the type and purpose of each agreement and its association with the proposed project. Provide a copy of each agreement already executed or drafted:

For sewer and/or water facilities projects, does the applicant currently hold the Certificate of Convenience and Necessity (CCN) for the target area proposed in the application? (If not a sewer and/or water facilities project, please choose N/A): N/A

Mitigation

Identify the specific risk the proposed project will mitigate against: Severe Coastal Flooding

Describe as to how the proposed project addresses/mitigates against the current and future risks identified: IReplacing the asphalt roadway segment with concrete will mitigate against current and future risk by minimizing the impacts of excessive coastal storm surge and runoff, negating the creation of urban heat islands, and ensuring residents' access to a community lifeline which facilitates travel to the nearest identified evacuation route should hurricane force winds and accompanying rain be forecasted. The chosen construction material will be more resilient for the following reasons:

•Concrete is more resistant to heavy rainfall and flooding. Unlike asphalt which can deteriorate quickly when exposed to water, concrete remains stable and intact, reduction the need for frequent repairs and ensuring safer road conditions.

•Concrete's ability to reflect sunlight helps it remain cooler than asphalt, which absorbs and retains heat. With its higher albedo, concrete reflects more sunlight than asphalt, which absorbs heat. This property helps to keep urban areas cooler, combating the urban heat island effect.

•From an environmental perspective, concrete production emits fewer greenhouse gases compared to asphalt. Moreover, concrete can be recycled and reused in new construction projects, minimizing environmental impact and promoting sustainability.

•Concrete is less prone to rutting and deformation under heavy loads and high temperatures with a superior load-bearing capacity. This resistance ensures a more consistent and safer driving surface, reducing the risk of vehicle damage and accidents.

•Concrete streets boast a significantly longer lifespan than their asphalt counterparts. Typically, concrete roads can last between 20 to 40 years with minimal maintenance, whereas asphalt streets often require resurfacing and repairs every 10 to 15 years. This longevity makes concrete a cost-effective option in the long run.

Provide information about how the proposed mitigation efforts integrate into the community's emergency and resiliency plans: The proposed mitigation effort, modification to the identified roadway segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: “Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards “ (p.270)

The proposed mitigation activity is also in concert with the goals of the Texas Water Development Board’s 2024 Texas Flood Plan which includes roadway safety and early warning system goals. The plan notes “This includes goals to improve safety at low water crossings, improve the level of service for exposed roadway segments, and increase the implementation of flood early warning systems for roadways and flood prone areas” (p.183). Further, the roadway improvements in the Bacliff and San Leon areas would complement Project #0611000436 on p.

31 of Volume II of the 2024 Texas State Flood Plan, which is an analysis of roadside ditch and driveway improvements in Bacliff and San Leon.

In addition, significant damage to the roadway segments would impede residents from being able to access the nearest hurricane evacuation route per Galveston County's Hurricane Evacuation Mapping (Houston-Galveston Area Council-Hurricane Evacuation | Galveston, TX - Official Website).

See the 2022 Galveston County Hazard Mitigation Plan reference document, Texas Flood Plan reference document, and the Houston-Galveston Area Council's Evacuation Route documentation.

In the space provided, list documentation provided to support the identification of the threat or hazard and how it relates to potential impact: The hazard was identified through consultation with the national weather service, a review of the NOAA storm events database, and review of the risk assessment within the hazard mitigation plan. The national weather service issued 21 flash flood warnings between 5/2012 and 9/2023 which resulted in over $4M in property damages according to the Office of Emergency Management.

Provide a brief description of how the proposed project addresses an integrated approach to mitigation: This project demonstrates an integrated approach towards mitigation as the county takes part in local and regional planning efforts and considered this project within the context of those planning efforts to determine if the project was in concert with both local and mitigation goals, objectives and strategies. This was accomplished by considering a number of factors/indicators as the project was developed including local and regional community acceptance of the project; effects on local and regional populations; technical feasibility and secondary local and regional impacts; the degree of local and regional public and political support for the project; existing local and regional legal authorities; costs, benefits, and the project's contribution to the local and regional economy; and existing local and regional environmental laws, regulations and ordinances.

Considering the local evaluation of hazard risks, responsible floodplain management, future extreme weather/natural disaster events, and long-term risks, describe how the proposed project promotes sustainable community resilience: The project promotes sustainable community resilience as it affords unimpeded access to a critical community lifeline, transportation. This segment of roadway is a part of the overarching county and regional transportation infrastructure. Transportation, as with other community lifelines, enables the continuous operation of critical government and business functions and is essential to human health and safety or economic security. Unimpeded access to this community lifeline has the potential to save lives by facilitating first responder's egress and ingress to homes within the community and community members' access to emergency evacuation routes should hurricane force winds and rains be forecasted. The project promotes economic security as unimpeded access to transportation routes allows community members to maintain or seek employment and patronize local businesses.

Describe how the proposed project is consistent with local and regional planning efforts to effect disaster mitigation: The proposed mitigation effort, modification to the identified roadway segments to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: "Goal 1: Minimize loss of life, injury,

damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards " (p.270)

Further, the plan also includes a project specific to the Bacliff area of Galveston County which the proposed road improvements to the Bacliff area included in this application would complement. Mitigation action 2022-Galveston County 0-12 on p. 330 of the plan states "Problem: The Bacliff area of Galveston County has storm water restrictions due to a bowl effect of the surrounding state highways (SH 146, SH 646 Grand Ave) and high elevation bluff along Galveston Bay. Solution: Improve channel drains and culvert crossing thru the State Highways."

The proposed mitigation activity is also in concert with the goals of the Texas Water Development Board's 2024 Texas Flood Plan which includes roadway safety and early warning system goals. The plan notes "This includes goals to improve safety at low water crossings, improve the level of service for exposed roadway segments, and increase the implementation of flood early warning systems for roadways and flood prone areas" (p.183). Further, the roadway improvements in the Bacliff and San Leon areas would complement Project #0611000436 on p. 31 of Volume II of the 2024 Texas State Flood Plan, which is an analysis of roadside ditch and driveway improvements in Bacliff and San Leon.

Was a cost-benefit analysis used in the selection of the proposed project? No

Describe how the proposed project impacts vulnerable populations in the local community.: Either the entire census block or a substantial portion of the census block consists of low to moderate income persons, which are vulnerable solely based on their socio-economic status. Replacing the roadway segments with a more durable flood-resistant material will enable residents to more readily access evacuation routes during inclement weather events and places of employment and community service providers on a daily basis.

Describe how the proposed project creates economic opportunities for the local community: The project in and of itself does not create economic opportunities, but it does facilitate access to economic opportunities by enabling residents to be able to travel to their places of employment (employed residents) or potential places of employment (jobseekers). Further, residents will be able to continue to frequent local businesses including gas stations, grocery stores, restaurants, and other small locally owned businesses which rely on their customer bases to remain solvent and drive the local economy.

Does this project disproportionately impact vulnerable populations in the local community? No

Does the proposed project align with investments from other state or local capital improvements and infrastructure development efforts? Yes

Does the proposed project employ adaptable and reliable technology to guard against premature obsolescence? Yes

Describe the applicant's overall mitigation plan and how the project addressed in this application furthers that plan: The proposed mitigation effort, modification to the identified roadway segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: "Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards " (p.270)

Further, the plan also includes a project specific to the Bacliff area of Galveston County which the proposed road improvements to the Bacliff area included in this application would complement. Mitigation action 2022-Galveston County 0-12 on p. 330 of the plan states "Problem: The Bacliff area of Galveston County has storm water restrictions due to a bowl effect of the surrounding state highways (SH 146, SH 646 Grand Ave) and high elevation bluff along Galveston Bay. Solution: Improve channel drains and culvert crossing thru the State Highways."

Describe how the proposed project will contribute to the community's resiliency against future disasters as a result of these projects: Replacing the asphalt roadway segment with concrete will mitigate against future risk by minimizing the impacts of excessive coastal storm surge and runoff, negating the creation of urban heat islands, and ensuring residents are able to travel unimpeded to the nearest identified evacuation route should hurricane force winds and accompanying rain be forecasted.

Bacliff-19th Street Improvements

Project Info

Project Information

DRGR Activity: Street Improvements

Project Type: Street Improvements

Project Title: Bacliff-19th Street Improvements

Does this project include replacement or relocation of a facility (i.e., lift station, water treatment plant, etc.)? No

Provide a detailed description of the scope of work proposed. For proposed work involving a length of road, ditch, channel, etc., report the scope of the project in linear feet (lf): Bacliff, Texas runs along the Houston Ship channel with commerce and oil and gas production traversing the Highway 146 corridor between the Port of Houston and the refineries/plants of Texas City including multiple Marathon locations, Valero, Advario, Rosefield, and Eastman. Bacliff's proximity to Highway 146 includes it in the communities that create a hub for business, trade, tourism, recreational opportunities and one of the nation's largest energy production corridors between Pasadena and Texas City.

Bacliff is geographically situated directly between Galveston Bay to the east and Highway 146 to the west creating a bowl effect where storm water collects and is slow to drain due to outdated and inefficient drainage infrastructure. The County of Galveston contacted the local National Weather Service (NWS) office to request the number of flash flooding events which have impacted Bacliff. The NWS accessed NOAA's National Centers for Environmental Information and noted having issued 21 flash flood warnings between 5/12/22 and 9/15/23. Six of these warnings resulted in flooding which caused property damage. Notable events include Hurricane Harvey in August of 2017, which resulted in $4,000,000 in damages to the Bayview neighborhood in Bacliff and a rainfall event on June 4, 2021, which flooded 100 homes and caused $500,000 in property damage in the Bacliff community.

The current drainage system in Bacliff was designed and constructed in the mid 1900's when many of the homes were built with no requirements for the inclusion of impervious surfaces and retainage ponds to lower the impact of heavy rainfall events. Over the last 40 years, private homes along the bay have increased in size and value with an increased need for elevated foundations, which contributes to the bowl effect of the inner neighborhoods of the Bacliff community. In addition, an exponential increase in business development along Highway 146 with increased impervious surface for foundations and large parking lots along with the ever-increasing elevation of the highway have further exasperated the flooding problems of the Bacliff area. In response to the Bacliff's identified flood risk, this flood resistant street improvement entails the replacement of 1,992 LF of existing asphalt roadway with 1,992 LF of more durable concrete pavement from the intersection of 19th St and Jackson Ave to southern end of 19th Street (Start Point: 29.502639, -94.996222, Midpoint: 29.499778, -94.993639 and End Point: 29.497000, -94.991222).

Site: Project Site Title	Site: Street Address
Bacliff -19th Street Improvements	19th Street, Bacliff, TX

Describe a plan for the long-term funding and management of the operations and maintenance of the project: Galveston County Road and Bridge Department is responsible for maintaining this road segment. Lee Crowder is the road administrator and ultimately responsible for ensuring all county roads are operated and maintained appropriately. The department ensures the road surfaces are cleaned throughout the year, as conditions require, any identified cracks are sealed, and the road segment is resealed in its entirety as needed. The current county budget already accounts for expenditures to maintain all county roads, including this segment.

Total proposed number of linear feet: 1,992

Total number of proposed public facilities:

Project Phase	Start Date	End Date	Length (in months)
Submit As-Builts/COCC/FWCR	06-01-2027	08-01-2027	2

American Indian/Alaskan Native/Black African American	0	0	0

Race	Hispanic Population	Non-Hispanic Population	Total Population
American Indian/Alaskan Native	30	26	56

Which HUD national objective does the project meet? LMI

Describe activities that benefit low- and moderate-income people: The entire census block is comprised of low to moderate income people. Ensuring the roadway is accessible to local residents will enable timely travel to the nearest evacuation route should hurricane force winds/accompanying rain be forecasted while also allowing first responders ease of ingress and egress the homes.

Method(s) used to determine the beneficiaries: LMI Area Benefit

What method was used for Beneficiary Identification? Census (HUD LMISD)

Provide a brief description of the beneficiary identification method used to determine this national objective and upload supporting beneficiary maps, census data, and/or survey documents: The beneficiary population was determined through a geospatial analysis of the most recent census block data using the American Community Survey Summary File Retrieval Tool and ArcGIS.

U.S. Congressional District #: 14

Texas Representative District #: 23

Texas Senate District #: 11

Environmental

What is the current status of the project? Not yet begun

Will the assistance requested have any negative impact(s) or effect(s) on the environment? No

Is the proposed project likely to require an archaeological assessment? No

Is the proposed site(s) listed on the National Register of Historic Places? No

Is the project in a designated floodway or coastal high hazard area? No

Is the project in a designated special flood hazard area or a designated wetland? No

For projects in the 500 or 100-year floodplain: Does your project involve a critical action as defined in 24CFR55.2(b)(3)?

Is any project site located in a known critical habitat for endangered species? No

Is any project site a known hazardous site? No

Is any project site located on federal lands or at a federal installation? No

Is any project site subject to or participating in Fixing America's Surface Transportation Act (FAST-41) (P.L. 114-94)? No

What level of environmental review is likely needed for this project? Environmental Assessment

Provide any additional detail or information relevant to Environmental Review: Galveston County does not anticipate that the proposed project will have any negative environmental consequences as the activity (replacing asphalt with concrete) replaces an equal amount of material along the same amount of linear feet of existing roadway. No new ground disturbance will occur.

Provide a brief narrative regarding how CDBG-MIT funding is to be used. Demonstrate that HUD CDBG environmental requirements have been met to date:

Permits

Does the project require any federal, state, or other permits, approvals, or waivers to complete the proposed work? No

If yes, describe the type and purpose of each permit and its association with the proposed project. Provide a copy of each permit already executed:

Does the project require any type of ratified, legally binding agreement between the applicant and any other entity to provide continual operation upon completion? No

If yes, describe the type and purpose of each agreement and its association with the proposed project. Provide a copy of each agreement already executed or drafted:

For sewer and/or water facilities projects, does the applicant currently hold the Certificate of Convenience and Necessity (CCN) for the target area proposed in the application? (If not a sewer and/or water facilities project, please choose N/A): N/A

Budget Activity Lines

Program Budget Code	Planned/Requested Amount	Planned Other Funds Amount	Total	Percent of Total
Planning	$0.00	$0.00	$0.00	0%
Acquisition	$0.00	$0.00	$0.00	0%
Environmental	$0.00	$0.00	$0.00	0%
Special Environmental	$0.00	$0.00	$0.00	0%
Grant Administration	$17,257.64	$0.00	$17,257.64	4.8%
Engineering	$16,435.85	$0.00	$16,435.85	4.5%
Construction	$328,637.28	$0.00	$328,637.28	90.7%

Mitigation

Identify the specific risk the proposed project will mitigate against: Severe Coastal Flooding

Describe as to how the proposed project addresses/mitigates against the current and future risks identified: Replacing the asphalt roadway segment with concrete will mitigate against current and future risk by minimizing the impacts of excessive coastal storm surge and runoff, negating the creation of urban heat islands, and ensuring residents' access to a community lifeline which facilitates travel to the nearest identified evacuation route should hurricane force winds and accompanying rain be forecasted. The chosen construction material will be more resilient for the following reasons:

•Concrete is more resistant to heavy rainfall and flooding. Unlike asphalt which can deteriorate quickly when exposed to water, concrete remains stable and intact, reduction the need for frequent repairs and ensuring safer road conditions.

•Concrete's ability to reflect sunlight helps it remain cooler than asphalt, which absorbs and retains heat. With its higher albedo, concrete reflects more sunlight than asphalt, which absorbs heat. This property helps to keep urban areas cooler, combating the urban heat island effect.

•From an environmental perspective, concrete production emits fewer greenhouse gases compared to asphalt. Moreover, concrete can be recycled and reused in new construction projects, minimizing environmental impact and promoting sustainability.

•Concrete is less prone to rutting and deformation under heavy loads and high temperatures with a superior load-bearing capacity. This resistance ensures a more consistent and safer driving surface, reducing the risk of vehicle damage and accidents.

•Concrete streets boast a significantly longer lifespan than their asphalt counterparts. Typically, concrete roads can last between 20 to 40 years with minimal maintenance, whereas asphalt streets often require resurfacing and repairs every 10 to 15 years. This longevity makes concrete a cost-effective option in the long run.

Provide information about how the proposed mitigation efforts integrate into the community's emergency and resiliency plans: The proposed mitigation effort, modification to the identified roadway segments to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: “Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards “ (p.270)

The proposed mitigation activity is also in concert with the goals of the Texas Water Development Board’s 2024 Texas Flood Plan which includes roadway safety and early warning system goals. The plan notes “This includes goals to improve safety at low water crossings, improve the level of service for exposed roadway segments, and increase the implementation of flood early warning systems for roadways and flood prone areas” (p.183). Further, the roadway improvements in the Bacliff and San Leon areas would complement Project #0611000436 on p.

31 of Volume II of the 2024 Texas State Flood Plan, which is an analysis of roadside ditch and driveway improvements in Bacliff and San Leon.

In addition, significant damage to the roadway segments would impede residents from being able to access and abide by local evacuation plans, thereby increasing the risk of injury or death as a result of non-compliance. Per Galveston County's Hurricane Evacuation Mapping (Houston-Galveston Area Council-Hurricane Evacuation | Galveston, TX - Official Website) HWY 146 is the primary evacuation route during an emergency. Residents who are unable to use this roadway segment would be limited in their ability to access evacuation routes or emergency medical care during blue sky days.

See the 2022 Galveston County Hazard Mitigation Plan reference document, Texas Flood Plan reference document, and the Houston-Galveston Area Council's Evacuation Route documentation.

In the space provided, list documentation provided to support the identification of the threat or hazard and how it relates to potential impact: The hazard was identified through consultation with the national weather service, a review of the NOAA storm events database, and review of the risk assessment within the hazard mitigation plan. The national weather service issued 21 flash flood warnings between 5/2012 and 9/2023 which resulted in over $4M in property damages according to the Office of Emergency Management.

Provide a brief description of how the proposed project addresses an integrated approach to mitigation: This project demonstrates an integrated approach towards mitigation as the county takes part in local and regional planning efforts and considered this project within the context of those planning efforts to determine if the project was in concert with both local and mitigation goals, objectives and strategies. This was accomplished by considering a number of factors/indicators as the project was developed including local and regional community acceptance of the project; effects on local and regional populations; technical feasibility and secondary local and regional impacts; the degree of local and regional public and political support for the project; existing local and regional legal authorities; costs, benefits, and the project's contribution to the local and regional economy; and existing local and regional environmental laws, regulations and ordinances.

Considering the local evaluation of hazard risks, responsible floodplain management, future extreme weather/natural disaster events, and long-term risks, describe how the proposed project promotes sustainable community resilience: The project promotes sustainable community resilience as it affords unimpeded access to a critical community lifeline, transportation. This segment of roadway is a part of the overarching county and regional transportation infrastructure. Transportation, as with other community lifelines, enables the continuous operation of critical government and business functions and is essential to human health and safety or economic security. Unimpeded access to this community lifeline has the potential to save lives by facilitating first responder's egress and ingress to homes within the community and community members' access to emergency evacuation routes should hurricane force winds and rains be forecasted. The project promotes economic security as unimpeded access to transportation routes allows community members to maintain or seek employment and patronize local businesses.

Describe how the proposed project is consistent with local and regional planning efforts to effect disaster mitigation: The proposed mitigation effort, modification to the identified roadway

segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: “Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards “ (p.270)

Further, the plan also includes a project specific to the Bacliff area of Galveston County which the proposed road improvements to the Bacliff area included in this application would complement. Mitigation action 2022-Galveston County 0-12 on p. 330 of the plan states “Problem: The Bacliff area of Galveston County has storm water restrictions due to a bowl effect of the surrounding state highways (SH 146, SH 646 Grand Ave) and high elevation bluff along Galveston Bay. Solution: Improve channel drains and culvert crossing thru the State Highways.”

The proposed mitigation activity is also in concert with the goals of the Texas Water Development Board’s 2024 Texas Flood Plan which includes roadway safety and early warning system goals. The plan notes “This includes goals to improve safety at low water crossings, improve the level of service for exposed roadway segments, and increase the implementation of flood early warning systems for roadways and flood prone areas” (p.183). Further, the roadway improvements in the Bacliff and San Leon areas would complement Project #0611000436 on p. 31 of Volume II of the 2024 Texas State Flood Plan, which is an analysis of roadside ditch and driveway improvements in Bacliff and San Leon.

Was a cost-benefit analysis used in the selection of the proposed project? Yes

Describe how the proposed project impacts vulnerable populations in the local community.: Either the entire census block or a substantial portion of the census block consists of low to moderate income persons, which are vulnerable solely based on their socio-economic status. Replacing the roadway segments with a more durable flood-resistant material will enable residents to more readily access evacuation routes during inclement weather events and places of employment and community service providers on a daily basis.

Describe how the proposed project creates economic opportunities for the local community: The project in and of itself does not create economic opportunities, but it does facilitate access to economic opportunities by enabling residents to be able to travel to their places of employment (employed residents) or potential places of employment (jobseekers). Further, residents will be able to continue to frequent local businesses including gas stations, grocery stores, restaurants, and other small locally owned businesses which rely on their customer bases to remain solvent and drive the local economy.

Does this project disproportionately impact vulnerable populations in the local community? No

Does the proposed project align with investments from other state or local capital improvements and infrastructure development efforts? Yes

Does the proposed project employ adaptable and reliable technology to guard against premature obsolescence? Yes

Describe the applicant's overall mitigation plan and how the project addressed in this application furthers that plan: The proposed mitigation effort, modification to the identified roadway segments to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: “Goal 1: Minimize loss of life,

injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards “ (p.270)

Further, the plan also includes a project specific to the Bacliff area of Galveston County which the proposed road improvements to the Bacliff area included in this application would complement. Mitigation action 2022-Galveston County 0-12 on p. 330 of the plan states “Problem: The Bacliff area of Galveston County has storm water restrictions due to a bowl effect of the surrounding state highways (SH 146, SH 646 Grand Ave) and high elevation bluff along Galveston Bay. Solution: Improve channel drains and culvert crossing thru the State Highways.”

Describe how the proposed project will contribute to the community's resiliency against future disasters as a result of these projects: Replacing the asphalt roadway segment with concrete will mitigate against future risk by minimizing the impacts of excessive coastal storm surge and runoff, negating the creation of urban heat islands, and ensuring residents are able to travel unimpeded to the nearest identified evacuation route should hurricane force winds and accompanying rain be forecasted.

Bacliff-20th Street Improvements

Project Info

Project Information

DRGR Activity: Street Improvements

Project Type: Street Improvements

Project Title: Bacliff-20th Street Improvements

Does this project include replacement or relocation of a facility (i.e., lift station, water treatment plant, etc.)? No

Provide a detailed description of the scope of work proposed. For proposed work involving a length of road, ditch, channel, etc., report the scope of the project in linear feet (lf): Bacliff, Texas runs along the Houston Ship channel with commerce and oil and gas production traversing the Highway 146 corridor between the Port of Houston and the refineries/plants of Texas City including multiple Marathon locations, Valero, Advario, Rosefield, and Eastman. Bacliff's proximity to Highway 146 includes it in the communities that create a hub for business, trade, tourism, recreational opportunities and one of the nation's largest energy production corridors between Pasadena and Texas City.

Bacliff is geographically situated directly between Galveston Bay to the east and Highway 146 to the west creating a bowl effect where storm water collects and is slow to drain due to outdated and inefficient drainage infrastructure. The County of Galveston contacted the local National Weather Service (NWS) office to request the number of flash flooding events which have impacted Bacliff. The NWS accessed NOAA's National Centers for Environmental Information and noted having issued 21 flash flood warnings between 5/12/22 and 9/15/23. Six of these warnings resulted in flooding which caused property damage. Notable events include Hurricane Harvey in August of 2017, which resulted in $4,000,000 in damages to the Bayview neighborhood in Bacliff and a rainfall event on June 4, 2021, which flooded 100 homes and caused $500,000 in property damage in the Bacliff community.

The current drainage system in Bacliff was designed and constructed in the mid 1900's when many of the homes were built with no requirements for the inclusion of impervious surfaces and retainage ponds to lower the impact of heavy rainfall events. Over the last 40 years, private homes along the bay have increased in size and value with an increased need for elevated foundations, which contributes to the bowl effect of the inner neighborhoods of the Bacliff community. In addition, an exponential increase in business development along Highway 146 with increased impervious surface for foundations and large parking lots along with the ever-increasing elevation of the highway have further exasperated the flooding problems of the Bacliff area. In response to the Bacliff's identified flood risk, this flood resistant street improvement entails the replacement of 2,231 LF of existing asphalt roadway with 2,231 LF of more durable concrete pavement from the intersection of 20th Street and Avenue A to the intersection of 20th Street and Avenue E in Bacliff, Texas, a census designated place approximately 16 miles northwest of Galveston, Texas (Start Point: 29.500833, -94.995778, Midpoint: 29.499111, -94.994222 and End Point: 29.496917, -94.992417)

Site: Project Site Title	Site: Street Address
Bacliff -20th Street Improvements	20th Street, Bacliff, TX

Describe a plan for the long-term funding and management of the operations and maintenance of the project: Galveston County Road and Bridge Department is responsible for maintaining this road segment. Lee Crowder is the road administrator and ultimately responsible for ensuring all county roads are operated and maintained appropriately. The department ensures the road surfaces are cleaned throughout the year, as conditions require, any identified cracks are sealed, and the road segment is resealed in its entirety as needed. The current county budget already accounts for expenditures to maintain all county roads, including this segment.

Total proposed number of linear feet: 2,231

Total number of proposed public facilities:

Project Phase	Start Date	End Date	Length (in months)

Texas Representative District #: 23

Texas Senate District #: 11

Environmental

What is the current status of the project? Not yet begun

Will the assistance requested have any negative impact(s) or effect(s) on the environment? No

Is the proposed project likely to require an archaeological assessment? No

Is the proposed site(s) listed on the National Register of Historic Places? No

Is the project in a designated floodway or coastal high hazard area? No

Is the project in a designated special flood hazard area or a designated wetland? No

For projects in the 500 or 100-year floodplain: Does your project involve a critical action as defined in 24CFR55.2(b)(3)?

Is any project site located in a known critical habitat for endangered species? No

Is any project site a known hazardous site? No

Is any project site located on federal lands or at a federal installation? No

Is any project site subject to or participating in Fixing America's Surface Transportation Act (FAST-41) (P.L. 114-94)? No

What level of environmental review is likely needed for this project? Environmental Assessment

Provide any additional detail or information relevant to Environmental Review: Galveston County does not anticipate that the proposed project will have any negative environmental consequences as the activity (replacing asphalt with concrete) replaces an equal amount of material along the same amount of linear feet of existing roadway. No new ground disturbance will occur.

Provide a brief narrative regarding how CDBG-MIT funding is to be used. Demonstrate that HUD CDBG environmental requirements have been met to date:

Permits

Does the project require any federal, state, or other permits, approvals, or waivers to complete the proposed work? No

If yes, describe the type and purpose of each permit and its association with the proposed project. Provide a copy of each permit already executed:

Does the project require any type of ratified, legally binding agreement between the applicant and any other entity to provide continual operation upon completion? No

If yes, describe the type and purpose of each agreement and its association with the proposed project. Provide a copy of each agreement already executed or drafted:

For sewer and/or water facilities projects, does the applicant currently hold the Certificate of Convenience and Necessity (CCN) for the target area proposed in the application? (If not a sewer and/or water facilities project, please choose N/A): N/A

Mitigation

Identify the specific risk the proposed project will mitigate against: Severe Coastal Flooding

Describe as to how the proposed project addresses/mitigates against the current and future risks identified: Replacing the asphalt roadway segment with concrete will mitigate against current and future risk by minimizing the impacts of excessive coastal storm surge and runoff, negating the creation of urban heat islands, and ensuring residents' access to a community lifeline which facilitates travel to the nearest identified evacuation route should hurricane force winds and accompanying rain be forecasted. The chosen construction material will be more resilient for the following reasons:

•Concrete is more resistant to heavy rainfall and flooding. Unlike asphalt which can deteriorate quickly when exposed to water, concrete remains stable and intact, reduction the need for frequent repairs and ensuring safer road conditions.

•Concrete's ability to reflect sunlight helps it remain cooler than asphalt, which absorbs and retains heat. With its higher albedo, concrete reflects more sunlight than asphalt, which absorbs heat. This property helps to keep urban areas cooler, combating the urban heat island effect.

•From an environmental perspective, concrete production emits fewer greenhouse gases compared to asphalt. Moreover, concrete can be recycled and reused in new construction projects, minimizing environmental impact and promoting sustainability.

•Concrete is less prone to rutting and deformation under heavy loads and high temperatures with a superior load-bearing capacity. This resistance ensures a more consistent and safer driving surface, reducing the risk of vehicle damage and accidents.

•Concrete streets boast a significantly longer lifespan than their asphalt counterparts. Typically, concrete roads can last between 20 to 40 years with minimal maintenance, whereas asphalt streets often require resurfacing and repairs every 10 to 15 years. This longevity makes concrete a cost-effective option in the long run.

Provide information about how the proposed mitigation efforts integrate into the community's emergency and resiliency plans: The proposed mitigation effort, modification to the identified roadway segment o minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: “Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards “ (p.270)

The proposed mitigation activity is also in concert with the goals of the Texas Water Development Board’s 2024 Texas Flood Plan which includes roadway safety and early warning system goals. The plan notes “This includes goals to improve safety at low water crossings, improve the level of service for exposed roadway segments, and increase the implementation of flood early warning systems for roadways and flood prone areas” (p.183). Further, the roadway improvements in the Bacliff and San Leon areas would complement Project #0611000436 on p.

31 of Volume II of the 2024 Texas State Flood Plan, which is an analysis of roadside ditch and driveway improvements in Bacliff and San Leon.

In addition, significant damage to the roadway segments would impede residents from being able to access the nearest hurricane evacuation route per Galveston County's Hurricane Evacuation Mapping (Houston-Galveston Area Council-Hurricane Evacuation | Galveston, TX - Official Website).

In the space provided, list documentation provided to support the identification of the threat or hazard and how it relates to potential impact: The hazard was identified through consultation with the national weather service, a review of the NOAA storm events database, and review of the risk assessment within the hazard mitigation plan. The national weather service issued 21 flash flood warnings between 5/2012 and 9/2023 which resulted in over $4M in property damages according to the Office of Emergency Management.

Provide a brief description of how the proposed project addresses an integrated approach to mitigation: This project demonstrates an integrated approach towards mitigation as the county takes part in local and regional planning efforts and considered this project within the context of those planning efforts to determine if the project was in concert with both local and mitigation goals, objectives and strategies. This was accomplished by considering a number of factors/indicators as the project was developed including local and regional community acceptance of the project; effects on local and regional populations; technical feasibility and secondary local and regional impacts; the degree of local and regional public and political support for the project; existing local and regional legal authorities; costs, benefits, and the project's contribution to the local and regional economy; and existing local and regional environmental laws, regulations and ordinances.

Considering the local evaluation of hazard risks, responsible floodplain management, future extreme weather/natural disaster events, and long-term risks, describe how the proposed project promotes sustainable community resilience: The project promotes sustainable community resilience as it affords unimpeded access to a critical community lifeline, transportation. This segment of roadway is a part of the overarching county and regional transportation infrastructure. Transportation, as with other community lifelines, enables the continuous operation of critical government and business functions and is essential to human health and safety or economic security. Unimpeded access to this community lifeline has the potential to save lives by facilitating first responder's egress and ingress to homes within the community and community members' access to emergency evacuation routes should hurricane force winds and rains be forecasted. The project promotes economic security as unimpeded access to transportation routes allows community members to maintain or seek employment and patronize local businesses.

Describe how the proposed project is consistent with local and regional planning efforts to effect disaster mitigation: The proposed mitigation effort, modification to the identified roadway segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: "Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards " (p.270)

Further, the plan also includes a project specific to the Bacliff area of Galveston County which the proposed road improvements to the Bacliff area included in this application would complement. Mitigation action 2022-Galveston County 0-12 on p. 330 of the plan states "Problem: The Bacliff area of Galveston County has storm water restrictions due to a bowl effect of the surrounding state highways (SH 146, SH 646 Grand Ave) and high elevation bluff along Galveston Bay. Solution: Improve channel drains and culvert crossing thru the State Highways."

The proposed mitigation activity is also in concert with the goals of the Texas Water Development Board's 2024 Texas Flood Plan which includes roadway safety and early warning system goals. The plan notes "This includes goals to improve safety at low water crossings, improve the level of service for exposed roadway segments, and increase the implementation of flood early warning systems for roadways and flood prone areas" (p.183). Further, the roadway improvements in the Bacliff and San Leon areas would complement Project #0611000436 on p. 31 of Volume II of the 2024 Texas State Flood Plan, which is an analysis of roadside ditch and driveway improvements in Bacliff and San Leon.

Was a cost-benefit analysis used in the selection of the proposed project? Yes

Describe how the proposed project impacts vulnerable populations in the local community.: Either the entire census block or a substantial portion of the census block consists of low to moderate income persons, which are vulnerable solely based on their socio-economic status. Replacing the roadway segments with a more durable flood-resistant material will enable residents to more readily access evacuation routes during inclement weather events and places of employment and community service providers on a daily basis.

Describe how the proposed project creates economic opportunities for the local community: The project in and of itself does not create economic opportunities, but it does facilitate access to economic opportunities by enabling residents to be able to travel to their places of employment (employed residents) or potential places of employment (jobseekers). Further, residents will be able to continue to frequent local businesses including gas stations, grocery stores, restaurants, and other small locally owned businesses which rely on their customer bases to remain solvent and drive the local economy.

Does this project disproportionately impact vulnerable populations in the local community? No

Does the proposed project align with investments from other state or local capital improvements and infrastructure development efforts? Yes

Does the proposed project employ adaptable and reliable technology to guard against premature obsolescence? Yes

Describe the applicant's overall mitigation plan and how the project addressed in this application furthers that plan: The proposed mitigation effort, modification to the identified roadway segments to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: "Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards " (p.270)

Further, the plan also includes a project specific to the Bacliff area of Galveston County which the proposed road improvements to the Bacliff area included in this application would complement. Mitigation action 2022-Galveston County 0-12 on p. 330 of the plan states "Problem: The Bacliff area of Galveston County has storm water restrictions due to a bowl effect

of the surrounding state highways (SH 146, SH 646 Grand Ave) and high elevation bluff along Galveston Bay. Solution: Improve channel drains and culvert crossing thru the State Highways."

Describe how the proposed project will contribute to the community's resiliency against future disasters as a result of these projects: Replacing the asphalt roadway segment with concrete will mitigate against future risk by minimizing the impacts of excessive coastal storm surge and runoff, negating the creation of urban heat islands, and ensuring residents are able to travel unimpeded to the nearest identified evacuation route should hurricane force winds and accompanying rain be forecasted.

Bacliff-Avenue E Street Improvements

Project Info

Project Information

DRGR Activity: Street Improvements

Project Type: Street Improvements

Project Title: Bacliff-Avenue E Street Improvements

Does this project include replacement or relocation of a facility (i.e., lift station, water treatment plant, etc.)? No

Provide a detailed description of the scope of work proposed. For proposed work involving a length of road, ditch, channel, etc., report the scope of the project in linear feet (lf): Bacliff, Texas runs along the Houston Ship channel with commerce and oil and gas production traversing the Highway 146 corridor between the Port of Houston and the refineries/plants of Texas City including multiple Marathon locations, Valero, Advario, Rosefield, and Eastman. Bacliff's proximity to Highway 146 includes it in the communities that create a hub for business, trade, tourism, recreational opportunities and one of the nation's largest energy production corridors between Pasadena and Texas City.

Bacliff is geographically situated directly between Galveston Bay to the east and Highway 146 to the west creating a bowl effect where storm water collects and is slow to drain due to outdated and inefficient drainage infrastructure. The County of Galveston contacted the local National Weather Service (NWS) office to request the number of flash flooding events which have impacted Bacliff. The NWS accessed NOAA's National Centers for Environmental Information and noted having issued 21 flash flood warnings between 5/12/22 and 9/15/23. Six of these warnings resulted in flooding which caused property damage. Notable events include Hurricane Harvey in August of 2017, which resulted in $4,000,000 in damages to the Bayview neighborhood in Bacliff and a rainfall event on June 4, 2021, which flooded 100 homes and caused $500,000 in property damage in the Bacliff community.

The current drainage system in the Bacliff neighborhoods was designed and constructed in the mid 1900's when many of the homes were built with no requirements for the inclusion of impervious surfaces and retainage ponds to lower the impact of heavy rainfall events. Over the last 40 years, private homes along the bay have increased in size and value with an increased need for elevated foundations, which contributes to the bowl effect of the inner neighborhoods of the Bacliff community. In addition, an exponential increase in business development along Highway 146 with increased impervious surface for foundations and large parking lots along with the ever-increasing elevation of the highway have further exasperated the flooding problems of the Bacliff area.

In response to the Bacliff's identified flood risk, this flood resistant street improvement includes the replacement of 352 LF of existing asphalt roadway with 352 LF of more durable concrete pavement from the intersection of 20th Street and Avenue E to the intersection of 19th Street and Avenue E (Start: 29.497028, -94.992389; Midpoint: 29.49725, -94.992028; End: 29.497528, -94.991639).

Once design and engineering are complete and required permits received, equipment, materials, and personnel will be mobilized to the site. The roadway will be closed to traffic and the existing asphalt road surface and base material will be removed using a stabilizer/reclaimer. The subbase will then be stabilized with lime to reduce the plasticity of the clay. The subbase will then be cured using a light fog spray of water or bituminous curing agent at a rate of 0.15 to 0.25 gal/yd2. If the construction contractor determines that trimming of the cement-treated subbase is unavoidable, just before paving, the surface will be treated to prevent bonding of the base to the surface. The applicable bond breakers may include reapplication of the bituminous curing agent with a thin layer of sand or the application of two coats of wax-based curing compound. The reinforced concrete pavement will then be formed and placed over the base and subbase. The concrete pavement will be six inches in uniform thickness, with 5.0 sacks of Portland Cement used per cubic yard and will be reinforced with #4 (1/2") deformed steel reinforcing bars spaced a maximum of 18" center to center each way. Once cured and tested, equipment, personnel and excess materials will be transported from the project site, and the roadway will be reopened to traffic.

Site: Project Site Title	Site: Street Address
Bacliff-Avenue E Street Improvements	Avenue E, Bacliff, TX

Describe a plan for the long-term funding and management of the operations and maintenance of the project: Galveston County Road and Bridge Department is responsible for maintaining this road segment. Lee Crowder is the road administrator and ultimately responsible for ensuring all county roads are operated and maintained appropriately. The department ensures the road surfaces are cleaned throughout the year, as conditions require, any identified cracks are sealed, and the road segment is resealed in its entirety as needed. The current county budget already accounts for expenditures to maintain all county roads, including this segment.

Total proposed number of linear feet: 353

Total number of proposed public facilities:

Which HUD national objective does the project meet? LMI

Describe activities that benefit low- and moderate-income people: The entire census block is comprised of low to moderate income people. Ensuring the roadway is accessible to local residents will enable timely travel to the nearest evacuation route should hurricane force winds/accompanying rain be forecasted.

Method(s) used to determine the beneficiaries: LMI Area Benefit

What method was used for Beneficiary Identification? Census (HUD LMISD)

Provide a brief description of the beneficiary identification method used to determine this national objective and upload supporting beneficiary maps, census data, and/or survey documents: The beneficiary population was determined through a geospatial analysis of the most recent census block data using the American Community Survey Summary File Retrieval Tool and ArcGIS.

U.S. Congressional District #: 14

Texas Representative District #: 23

Texas Senate District #: 11

Environmental

What is the current status of the project? Not yet begun

Will the assistance requested have any negative impact(s) or effect(s) on the environment? No

Is the proposed project likely to require an archaeological assessment? No

Is the proposed site(s) listed on the National Register of Historic Places? No

Is the project in a designated floodway or coastal high hazard area? No

Is the project in a designated special flood hazard area or a designated wetland? No

For projects in the 500 or 100-year floodplain: Does your project involve a critical action as defined in 24CFR55.2(b)(3)?

Is any project site located in a known critical habitat for endangered species? No

Is any project site a known hazardous site? No

Is any project site located on federal lands or at a federal installation? No

Is any project site subject to or participating in Fixing America's Surface Transportation Act (FAST-41) (P.L. 114-94)? No

What level of environmental review is likely needed for this project? Environmental Assessment

Provide any additional detail or information relevant to Environmental Review: Galveston County does not anticipate that the proposed project will have any negative environmental consequences as the activity (replacing asphalt with concrete) replaces an equal amount of material along the same amount of linear feet of existing roadway. No new ground disturbance will occur.

Provide a brief narrative regarding how CDBG-MIT funding is to be used. Demonstrate that HUD CDBG environmental requirements have been met to date:

Permits

Does the project require any federal, state, or other permits, approvals, or waivers to complete the proposed work? No

If yes, describe the type and purpose of each permit and its association with the proposed project. Provide a copy of each permit already executed:

Does the project require any type of ratified, legally binding agreement between the applicant and any other entity to provide continual operation upon completion? No

If yes, describe the type and purpose of each agreement and its association with the proposed project. Provide a copy of each agreement already executed or drafted:

For sewer and/or water facilities projects, does the applicant currently hold the Certificate of Convenience and Necessity (CCN) for the target area proposed in the application? (If not a sewer and/or water facilities project, please choose N/A): N/A

Budget Activity Lines

Program Budget Code	Planned/Requested Amount	Planned Other Funds Amount	Total	Percent of Total

Mitigation

Identify the specific risk the proposed project will mitigate against: Severe Coastal Flooding

Describe as to how the proposed project addresses/mitigates against the current and future risks identified: Replacing the asphalt roadway segment with concrete will mitigate against current and future risk by minimizing the impacts of excessive coastal storm surge and runoff, negating the creation of urban heat islands, and ensuring residents' access to a community lifeline which facilitates travel to the nearest identified evacuation route should hurricane force winds and accompanying rain be forecasted. The chosen construction material will be more resilient for the following reasons:

•Concrete is more resistant to heavy rainfall and flooding. Unlike asphalt which can deteriorate quickly when exposed to water, concrete remains stable and intact, reduction the need for frequent repairs and ensuring safer road conditions.

•Concrete's ability to reflect sunlight helps it remain cooler than asphalt, which absorbs and retains heat. With its higher albedo, concrete reflects more sunlight than asphalt, which absorbs heat. This property helps to keep urban areas cooler, combating the urban heat island effect.

•From an environmental perspective, concrete production emits fewer greenhouse gases compared to asphalt. Moreover, concrete can be recycled and reused in new construction projects, minimizing environmental impact and promoting sustainability.

•Concrete is less prone to rutting and deformation under heavy loads and high temperatures with a superior load-bearing capacity. This resistance ensures a more consistent and safer driving surface, reducing the risk of vehicle damage and accidents.

•Concrete streets boast a significantly longer lifespan than their asphalt counterparts. Typically, concrete roads can last between 20 to 40 years with minimal maintenance, whereas asphalt streets often require resurfacing and repairs every 10 to 15 years. This longevity makes concrete a cost-effective option in the long run.

Provide information about how the proposed mitigation efforts integrate into the community's emergency and resiliency plans: The proposed mitigation effort, modification to the identified roadway segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: “Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards “ (p.270)

The proposed mitigation activity is also in concert with the goals of the Texas Water Development Board’s 2024 Texas Flood Plan which includes roadway safety and early warning system goals. The plan notes “This includes goals to improve safety at low water crossings, improve the level of service for exposed roadway segments, and increase the implementation of flood early warning systems for roadways and flood prone areas” (p.183). Further, the roadway improvements in the Bacliff and San Leon areas would complement Project #0611000436 on p.

31 of Volume II of the 2024 Texas State Flood Plan, which is an analysis of roadside ditch and driveway improvements in Bacliff and San Leon.

In addition, significant damage to the roadway segments would impede residents from being able to access the nearest hurricane evacuation route per Galveston County's Hurricane Evacuation Mapping (Houston-Galveston Area Council-Hurricane Evacuation | Galveston, TX - Official Website).

See the 2022 Galveston County Hazard Mitigation Plan reference document, Texas Flood Plan reference document, and the Houston-Galveston Area Council's Evacuation Route documentation.

In the space provided, list documentation provided to support the identification of the threat or hazard and how it relates to potential impact: The hazard was identified through consultation with the national weather service, a review of the NOAA storm events database, and review of the risk assessment within the hazard mitigation plan. The national weather service issued 21 flash flood warnings between 5/2012 and 9/2023 which resulted in over $4M in property damages according to the Office of Emergency Management.

Provide a brief description of how the proposed project addresses an integrated approach to mitigation: This project demonstrates an integrated approach towards mitigation as the county takes part in local and regional planning efforts and considered this project within the context of those planning efforts to determine if the project was in concert with both local and mitigation goals, objectives and strategies. This was accomplished by considering a number of factors/indicators as the project was developed including local and regional community acceptance of the project; effects on local and regional populations; technical feasibility and secondary local and regional impacts; the degree of local and regional public and political support for the project; existing local and regional legal authorities; costs, benefits, and the project's contribution to the local and regional economy; and existing local and regional environmental laws, regulations and ordinances.

Considering the local evaluation of hazard risks, responsible floodplain management, future extreme weather/natural disaster events, and long-term risks, describe how the proposed project promotes sustainable community resilience: The project promotes sustainable community resilience as it affords unimpeded access to a critical community lifeline, transportation. This segment of roadway is a part of the overarching county and regional transportation infrastructure. Transportation, as with other community lifelines, enables the continuous operation of critical government and business functions and is essential to human health and safety or economic security. Unimpeded access to this community lifeline has the potential to save lives by facilitating first responder's egress and ingress to homes within the community and community members' access to emergency evacuation routes should hurricane force winds and rains be forecasted. The project promotes economic security as unimpeded access to transportation routes allows community members to maintain or seek employment and patronize local businesses.

Describe how the proposed project is consistent with local and regional planning efforts to effect disaster mitigation: The proposed mitigation effort, modification to the identified roadway segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: "Goal 1: Minimize loss of life, injury,

damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards " (p.270)

Further, the plan also includes a project specific to the Bacliff area of Galveston County which the proposed road improvements to the Bacliff area included in this application would complement. Mitigation action 2022-Galveston County 0-12 on p. 330 of the plan states "Problem: The Bacliff area of Galveston County has storm water restrictions due to a bowl effect of the surrounding state highways (SH 146, SH 646 Grand Ave) and high elevation bluff along Galveston Bay. Solution: Improve channel drains and culvert crossing thru the State Highways."

The proposed mitigation activity is also in concert with the goals of the Texas Water Development Board's 2024 Texas Flood Plan which includes roadway safety and early warning system goals. The plan notes "This includes goals to improve safety at low water crossings, improve the level of service for exposed roadway segments, and increase the implementation of flood early warning systems for roadways and flood prone areas" (p.183). Further, the roadway improvements in the Bacliff and San Leon areas would complement Project #0611000436 on p. 31 of Volume II of the 2024 Texas State Flood Plan, which is an analysis of roadside ditch and driveway improvements in Bacliff and San Leon.

Was a cost-benefit analysis used in the selection of the proposed project? No

Describe how the proposed project impacts vulnerable populations in the local community.: Either the entire census block or a substantial portion of the census block consists of low to moderate income persons, which are vulnerable solely based on their socio-economic status. Replacing the roadway segments with a more durable flood-resistant material will enable residents to more readily access evacuation routes during inclement weather events and places of employment and community service providers on a daily basis.

Describe how the proposed project creates economic opportunities for the local community: The project in and of itself does not create economic opportunities, but it does facilitate access to economic opportunities by enabling residents to be able to travel to their places of employment (employed residents) or potential places of employment (jobseekers). Further, residents will be able to continue to frequent local businesses including gas stations, grocery stores, restaurants, and other small locally owned businesses which rely on their customer bases to remain solvent and drive the local economy.

Does this project disproportionately impact vulnerable populations in the local community? No

Does the proposed project align with investments from other state or local capital improvements and infrastructure development efforts? Yes

Does the proposed project employ adaptable and reliable technology to guard against premature obsolescence? Yes

Describe the applicant's overall mitigation plan and how the project addressed in this application furthers that plan: The proposed mitigation effort, modification to the identified roadway segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: "Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards " (p.270)

Further, the plan also includes a project specific to the Bacliff area of Galveston County which the proposed road improvements to the Bacliff area included in this application would complement. Mitigation action 2022-Galveston County 0-12 on p. 330 of the plan states "Problem: The Bacliff area of Galveston County has storm water restrictions due to a bowl effect of the surrounding state highways (SH 146, SH 646 Grand Ave) and high elevation bluff along Galveston Bay. Solution: Improve channel drains and culvert crossing thru the State Highways."

Describe how the proposed project will contribute to the community's resiliency against future disasters as a result of these projects: Replacing the asphalt roadway segment with concrete will mitigate against future risk by minimizing the impacts of excessive coastal storm surge and runoff, negating the creation of urban heat islands, and ensuring residents are able to travel unimpeded to the nearest identified evacuation route should hurricane force winds and accompanying rain be forecasted.

San Leon-9th Street Improvements

Project Info

Project Information

DRGR Activity: Street Improvements

Project Type: Street Improvements

Project Title: San Leon-9th Street Improvements

Does this project include replacement or relocation of a facility (i.e., lift station, water treatment plant, etc.)? No

Provide a detailed description of the scope of work proposed. For proposed work involving a length of road, ditch, channel, etc., report the scope of the project in linear feet (lf): San Leon, a small community of approximately 6,000 in Galveston County, has a lengthy history of being impacted by natural hazards. Much like its neighboring communities of Bacliff and Dickinson, it is prone to frequent flooding. This is largely attributed to its geographic location, elevation relative to Galveston Bay, poor drainage systems, and development over the years. First Street Foundation, a notable non-profit think tank, assessed overall flood risk throughout Texas and found that the Galveston Bay-side communities of San Leon, Bacliff and Dickinson are among the 10 most at-risk places for flooding in Texas. More than 99 percent of the homes in the three communities and more than 97 percent of all roads, as well as every commercial building, piece of public infrastructure and social facility, such as a house of worship or schools, are at risk of flooding. In response to the San Leon's identified flood risk, this flood resistant street improvement entails the replacement of 3,795 LF of existing asphalt roadway with 3,795 LF of more durable concrete pavement from the intersection of 9th Street and Avenue I tothe intersection of 9th Street and Avenue O (Start: 29.483083, -94.922806; Midpoint: 29.477944, -94.924306; End: 29.474194, -94.925833).

Once design and engineering are complete and required permits received, equipment, materials, and personnel will be mobilized to the site. The roadway will be closed to traffic and the existing asphalt road surface and base material will be removed using a stabilizer/reclaimer. The subbase will then be stabilized with lime to reduce the plasticity of the clay. The subbase will then be cured using a light fog spray of water or bituminous curing agent at a rate of 0.15 to 0.25 gal/yd2. If the construction contractor determines that trimming of the cement-treated subbase is unavoidable, just before paving, the surface will be treated to prevent bonding of the base to the surface. The applicable bond breakers may include reapplication of the bituminous curing agent with a thin layer of sand or the application of two coats of wax-based curing compound. The reinforced concrete pavement will then be formed and placed over the base and subbase. The concrete pavement will be six inches in uniform thickness, with 5.0 sacks of Portland Cement used per cubic yard and will be reinforced with #4 (1/2") deformed steel reinforcing bars spaced a maximum of 18" center to center each way. Once cured and tested, equipment, personnel and excess materials will be transported from the project site, and the roadway will be reopened to traffic.

Mitigation

Identify the specific risk the proposed project will mitigate against: Severe Coastal Flooding

Describe as to how the proposed project addresses/mitigates against the current and future risks identified: Replacing the asphalt roadway segment with concrete will mitigate against current and future risk by minimizing the impacts of excessive coastal storm surge and runoff, negating the creation of urban heat islands, and ensuring residents' access to a community lifeline which facilitates travel to the nearest identified evacuation route should hurricane force winds and accompanying rain be forecasted. The chosen construction material will be more resilient for the following reasons:

•Concrete is more resistant to heavy rainfall and flooding. Unlike asphalt which can deteriorate quickly when exposed to water, concrete remains stable and intact, reduction the need for frequent repairs and ensuring safer road conditions.

•Concrete's ability to reflect sunlight helps it remain cooler than asphalt, which absorbs and retains heat. With its higher albedo, concrete reflects more sunlight than asphalt, which absorbs heat. This property helps to keep urban areas cooler, combating the urban heat island effect.

•From an environmental perspective, concrete production emits fewer greenhouse gases compared to asphalt. Moreover, concrete can be recycled and reused in new construction projects, minimizing environmental impact and promoting sustainability.

•Concrete is less prone to rutting and deformation under heavy loads and high temperatures with a superior load-bearing capacity. This resistance ensures a more consistent and safer driving surface, reducing the risk of vehicle damage and accidents.

•Concrete streets boast a significantly longer lifespan than their asphalt counterparts. Typically, concrete roads can last between 20 to 40 years with minimal maintenance, whereas asphalt streets often require resurfacing and repairs every 10 to 15 years. This longevity makes concrete a cost-effective option in the long run.

Provide information about how the proposed mitigation efforts integrate into the community's emergency and resiliency plans: The proposed mitigation effort, modification to the identified roadway segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: “Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards “ (p.270)

The proposed mitigation activity is also in concert with the goals of the Texas Water Development Board’s 2024 Texas Flood Plan which includes roadway safety and early warning system goals. The plan notes “This includes goals to improve safety at low water crossings, improve the level of service for exposed roadway segments, and increase the implementation of flood early warning systems for roadways and flood prone areas” (p.183). Further, the roadway improvements in the Bacliff and San Leon areas would complement Project #0611000436 on p.

31 of Volume II of the 2024 Texas State Flood Plan, which is an analysis of roadside ditch and driveway improvements in Bacliff and San Leon.

In addition, significant damage to the roadway segments would impede residents from being able to access the nearest hurricane evacuation route per Galveston County's Hurricane Evacuation Mapping (Houston-Galveston Area Council-Hurricane Evacuation | Galveston, TX - Official Website).

See the 2022 Galveston County Hazard Mitigation Plan reference document, Texas Flood Plan reference document, and the Houston-Galveston Area Council's Evacuation Route documentation.

In the space provided, list documentation provided to support the identification of the threat or hazard and how it relates to potential impact: The hazard was identified through consultation with the national weather service, a review of the NOAA storm events database, and review of the risk assessment within the hazard mitigation plan.

Provide a brief description of how the proposed project addresses an integrated approach to mitigation: This project demonstrates an integrated approach towards mitigation as the county takes part in local and regional planning efforts and considered this project within the context of those planning efforts to determine if the project was in concert with both local and mitigation goals, objectives and strategies. This was accomplished by considering a number of factors/indicators as the project was developed including local and regional community acceptance of the project; effects on local and regional populations; technical feasibility and secondary local and regional impacts; the degree of local and regional public and political support for the project; existing local and regional legal authorities; costs, benefits, and the project's contribution to the local and regional economy; and existing local and regional environmental laws, regulations and ordinances.

Considering the local evaluation of hazard risks, responsible floodplain management, future extreme weather/natural disaster events, and long-term risks, describe how the proposed project promotes sustainable community resilience: The project promotes sustainable community resilience as it affords unimpeded access to a critical community lifeline, transportation. This segment of roadway is a part of the overarching county and regional transportation infrastructure. Transportation, as with other community lifelines, enables the continuous operation of critical government and business functions and is essential to human health and safety or economic security. Unimpeded access to this community lifeline has the potential to save lives by facilitating first responder's egress and ingress to homes within the community and community members' access to emergency evacuation routes should hurricane force winds and rains be forecasted. The project promotes economic security as unimpeded access to transportation routes allows community members to maintain or seek employment and patronize local businesses.

Describe how the proposed project is consistent with local and regional planning efforts to effect disaster mitigation: The proposed mitigation effort, modification to the identified roadway segments to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: "Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard

events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards " (p.270)

The proposed mitigation activity is also in concert with the goals of the Texas Water Development Board's 2024 Texas Flood Plan which includes roadway safety and early warning system goals. The plan notes "This includes goals to improve safety at low water crossings, improve the level of service for exposed roadway segments, and increase the implementation of flood early warning systems for roadways and flood prone areas" (p.183). Further, the roadway improvements in the Bacliff and San Leon areas would complement Project #0611000436 on p. 31 of Volume II of the 2024 Texas State Flood Plan, which is an analysis of roadside ditch and driveway improvements in Bacliff and San Leon.

Was a cost-benefit analysis used in the selection of the proposed project? Yes

Describe how the proposed project impacts vulnerable populations in the local community.: Either the entire census block or a substantial portion of the census block consists of low to moderate income persons, which are vulnerable solely based on their socio-economic status. Replacing the roadway segments with a more durable flood-resistant material will enable residents to more readily access evacuation routes during inclement weather events and places of employment and community service providers on a daily basis.

Describe how the proposed project creates economic opportunities for the local community: The project in and of itself does not create economic opportunities, but it does facilitate access to economic opportunities by enabling residents to be able to travel to their places of employment (employed residents) or potential places of employment (jobseekers). Further, residents will be able to continue to frequent local businesses including gas stations, grocery stores, restaurants, and other small locally owned businesses which rely on their customer bases to remain solvent and drive the local economy.

Does this project disproportionately impact vulnerable populations in the local community? No

Does the proposed project align with investments from other state or local capital improvements and infrastructure development efforts? Yes

Does the proposed project employ adaptable and reliable technology to guard against premature obsolescence? Yes

Describe the applicant's overall mitigation plan and how the project addressed in this application furthers that plan: The proposed mitigation effort, modification to the identified roadway segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: "Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards " (p.270)

Describe how the proposed project will contribute to the community's resiliency against future disasters as a result of these projects: Replacing the asphalt roadway segment with concrete will mitigate against future risk by minimizing the impacts of excessive coastal storm surge and runoff, negating the creation of urban heat islands, and ensuring residents are able to travel unimpeded to the nearest identified evacuation route should hurricane force winds and accompanying rain be forecasted.

San Leon-18th Street Improvements

Project Info

Project Information

DRGR Activity: Street Improvements

Project Type: Street Improvements

Project Title: San Leon-18th Street Improvements

Does this project include replacement or relocation of a facility (i.e., lift station, water treatment plant, etc.)? No

Provide a detailed description of the scope of work proposed. For proposed work involving a length of road, ditch, channel, etc., report the scope of the project in linear feet (lf): San Leon, a small community of approximately 6,000 in Galveston County, has a lengthy history of being impacted by natural hazards. Much like its neighboring communities of Bacliff and Dickinson, it is prone to frequent flooding. This is largely attributed to its geographic location, elevation relative to Galveston Bay, poor drainage systems, and development over the years. First Street Foundation, a notable non-profit think tank, assessed overall flood risk throughout Texas and found that the Galveston Bay-side communities of San Leon, Bacliff and Dickinson are among the 10 most at-risk places for flooding in Texas. More than 99 percent of the homes in the three communities and more than 97 percent of all roads, as well as every commercial building, piece of public infrastructure and social facility, such as a house of worship or schools, are at risk of flooding. In response to the San Leon's identified flood risk, this flood resistant street improvement entails the replacement of 2,896 LF of existing asphalt roadway with 2,896 LF of more durable concrete pavement from the intersection of 18th Street and Avenue A to the southern end of 18th Street from the intersection of 19th Street (Start: 29.499333, -94.927667; Midpoint: 29.490806, -94.930167; End: 29.483806, -94.932167).

Once design and engineering are complete and required permits received, equipment, materials, and personnel will be mobilized to the site. The roadway will be closed to traffic and the existing asphalt road surface and base material will be removed using a stabilizer/reclaimer. The subbase will then be stabilized with lime to reduce the plasticity of the clay. The subbase will then be cured using a light fog spray of water or bituminous curing agent at a rate of 0.15 to 0.25 gal/yd2. If the construction contractor determines that trimming of the cement-treated subbase is unavoidable, just before paving, the surface will be treated to prevent bonding of the base to the surface. The applicable bond breakers may include reapplication of the bituminous curing agent with a thin layer of sand or the application of two coats of wax-based curing compound. The reinforced concrete pavement will then be formed and placed over the base and subbase. The concrete pavement will be six inches in uniform thickness, with 5.0 sacks of Portland Cement used per cubic yard and will be reinforced with #4 (1/2") deformed steel reinforcing bars spaced a maximum of 18" center to center each way. Once cured and tested, equipment, personnel and excess materials will be transported from the project site, and the roadway will be reopened to traffic.

Site: Project Site Title	Site: Street Address
San Leon-18th Street Improvements	18th St, San Leon, TX

Describe a plan for the long-term funding and management of the operations and maintenance of the project: Galveston County Road and Bridge Department is responsible for maintaining this road segment. Lee Crowder is the road administrator and ultimately responsible for ensuring all county roads are operated and maintained appropriately. The department ensures the road surfaces are cleaned throughout the year, as conditions require, any identified cracks are sealed, and the road segment is resealed in its entirety as needed. The current county budget already accounts for expenditures to maintain all county roads, including this segment.

Total proposed number of linear feet: 2,896

Total number of proposed public facilities:

Project Phase	Start Date	End Date	Length (in months)

Black African American/White	0	19	19

Race	Hispanic Population	Non-Hispanic Population	Total Population
White	642	2,209	2,851

Which HUD national objective does the project meet? LMI

Describe activities that benefit low- and moderate-income people: A significant portion of the census blocks are comprised of low to moderate income people. Ensuring the roadway is accessible to local residents will enable timely travel to the nearest evacuation route should hurricane force winds/accompanying rain be forecasted.

Method(s) used to determine the beneficiaries: LMI Area Benefit

What method was used for Beneficiary Identification? Census (HUD LMISD)

Provide a brief description of the beneficiary identification method used to determine this national objective and upload supporting beneficiary maps, census data, and/or survey documents: The beneficiary population was determined through a geospatial analysis of the most recent census block data using the American Community Survey Summary File Retrieval Tool and ArcGIS.

U.S. Congressional District #: 14

Texas Representative District #: 23

Texas Senate District #: 11

Environmental

What is the current status of the project? Not yet begun

Will the assistance requested have any negative impact(s) or effect(s) on the environment? No

Is the proposed project likely to require an archaeological assessment? No

Is the proposed site(s) listed on the National Register of Historic Places? No

Is the project in a designated floodway or coastal high hazard area? No

Is the project in a designated special flood hazard area or a designated wetland? Yes

For projects in the 500 or 100-year floodplain: Does your project involve a critical action as defined in 24CFR55.2(b)(3)? No

Is any project site located in a known critical habitat for endangered species? No

Is any project site a known hazardous site? No

Is any project site located on federal lands or at a federal installation? No

Is any project site subject to or participating in Fixing America's Surface Transportation Act (FAST-41) (P.L. 114-94)? No

What level of environmental review is likely needed for this project? Environmental Assessment

Provide any additional detail or information relevant to Environmental Review: Galveston County does not anticipate that the proposed project will have any negative environmental consequences as the activity (replacing asphalt with concrete) replaces an equal amount of material along the same amount of linear feet of existing roadway. No new ground disturbance will occur.

Provide a brief narrative regarding how CDBG-MIT funding is to be used. Demonstrate that HUD CDBG environmental requirements have been met to date:

Permits

Does the project require any federal, state, or other permits, approvals, or waivers to complete the proposed work? No

If yes, describe the type and purpose of each permit and its association with the proposed project. Provide a copy of each permit already executed:

Does the project require any type of ratified, legally binding agreement between the applicant and any other entity to provide continual operation upon completion? No

If yes, describe the type and purpose of each agreement and its association with the proposed project. Provide a copy of each agreement already executed or drafted:

For sewer and/or water facilities projects, does the applicant currently hold the Certificate of Convenience and Necessity (CCN) for the target area proposed in the application? (If not a sewer and/or water facilities project, please choose N/A): N/A

Mitigation

Identify the specific risk the proposed project will mitigate against: Severe Coastal Flooding

Describe as to how the proposed project addresses/mitigates against the current and future risks identified: Replacing the asphalt roadway segment with concrete will mitigate against current and future risk by minimizing the impacts of excessive coastal storm surge and runoff, negating the creation of urban heat islands, and ensuring residents' access to a community lifeline which facilitates travel to the nearest identified evacuation route should hurricane force winds and accompanying rain be forecasted. The chosen construction material will be more resilient for the following reasons:

•Concrete is more resistant to heavy rainfall and flooding. Unlike asphalt which can deteriorate quickly when exposed to water, concrete remains stable and intact, reduction the need for frequent repairs and ensuring safer road conditions.

•Concrete's ability to reflect sunlight helps it remain cooler than asphalt, which absorbs and retains heat. With its higher albedo, concrete reflects more sunlight than asphalt, which absorbs heat. This property helps to keep urban areas cooler, combating the urban heat island effect.

•From an environmental perspective, concrete production emits fewer greenhouse gases compared to asphalt. Moreover, concrete can be recycled and reused in new construction projects, minimizing environmental impact and promoting sustainability.

•Concrete is less prone to rutting and deformation under heavy loads and high temperatures with a superior load-bearing capacity. This resistance ensures a more consistent and safer driving surface, reducing the risk of vehicle damage and accidents.

•Concrete streets boast a significantly longer lifespan than their asphalt counterparts. Typically, concrete roads can last between 20 to 40 years with minimal maintenance, whereas asphalt streets often require resurfacing and repairs every 10 to 15 years. This longevity makes concrete a cost-effective option in the long run.

Provide information about how the proposed mitigation efforts integrate into the community's emergency and resiliency plans: The proposed mitigation effort, modification to the identified roadway segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: “Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards “ (p.270)

The proposed mitigation activity is also in concert with the goals of the Texas Water Development Board’s 2024 Texas Flood Plan which includes roadway safety and early warning system goals. The plan notes “This includes goals to improve safety at low water crossings, improve the level of service for exposed roadway segments, and increase the implementation of flood early warning systems for roadways and flood prone areas” (p.183). Further, the roadway improvements in the Bacliff and San Leon areas would complement Project #0611000436 on p.

31 of Volume II of the 2024 Texas State Flood Plan, which is an analysis of roadside ditch and driveway improvements in Bacliff and San Leon.

In addition, significant damage to the roadway segments would impede residents from being able to access the nearest hurricane evacuation route per Galveston County's Hurricane Evacuation Mapping (Houston-Galveston Area Council-Hurricane Evacuation | Galveston, TX - Official Website).

See the 2022 Galveston County Hazard Mitigation Plan reference document, Texas Flood Plan reference document, and the Houston-Galveston Area Council's Evacuation Route documentation.

In the space provided, list documentation provided to support the identification of the threat or hazard and how it relates to potential impact: The hazard was identified through consultation with the national weather service, a review of the NOAA storm events database, and review of the risk assessment within the hazard mitigation plan.

Provide a brief description of how the proposed project addresses an integrated approach to mitigation: This project demonstrates an integrated approach towards mitigation as the county takes part in local and regional planning efforts and considered this project within the context of those planning efforts to determine if the project was in concert with both local and mitigation goals, objectives and strategies. This was accomplished by considering a number of factors/indicators as the project was developed including local and regional community acceptance of the project; effects on local and regional populations; technical feasibility and secondary local and regional impacts; the degree of local and regional public and political support for the project; existing local and regional legal authorities; costs, benefits, and the project's contribution to the local and regional economy; and existing local and regional environmental laws, regulations and ordinances.

Considering the local evaluation of hazard risks, responsible floodplain management, future extreme weather/natural disaster events, and long-term risks, describe how the proposed project promotes sustainable community resilience: The project promotes sustainable community resilience as it affords unimpeded access to a critical community lifeline, transportation. This segment of roadway is a part of the overarching county and regional transportation infrastructure. Transportation, as with other community lifelines, enables the continuous operation of critical government and business functions and is essential to human health and safety or economic security. Unimpeded access to this community lifeline has the potential to save lives by facilitating first responder's egress and ingress to homes within the community and community members' access to emergency evacuation routes should hurricane force winds and rains be forecasted. The project promotes economic security as unimpeded access to transportation routes allows community members to maintain or seek employment and patronize local businesses.

Describe how the proposed project is consistent with local and regional planning efforts to effect disaster mitigation: The proposed mitigation effort, modification to the identified roadway segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: "Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard

events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards " (p.270)

The proposed mitigation activity is also in concert with the goals of the Texas Water Development Board's 2024 Texas Flood Plan which includes roadway safety and early warning system goals. The plan notes "This includes goals to improve safety at low water crossings, improve the level of service for exposed roadway segments, and increase the implementation of flood early warning systems for roadways and flood prone areas" (p.183). Further, the roadway improvements in the Bacliff and San Leon areas would complement Project #0611000436 on p. 31 of Volume II of the 2024 Texas State Flood Plan, which is an analysis of roadside ditch and driveway improvements in Bacliff and San Leon.

Was a cost-benefit analysis used in the selection of the proposed project? Yes

Describe how the proposed project impacts vulnerable populations in the local community.: Either the entire census block or a substantial portion of the census block consists of low to moderate income persons, which are vulnerable solely based on their socio-economic status. Replacing the roadway segments with a more durable flood-resistant material will enable residents to more readily access evacuation routes during inclement weather events and places of employment and community service providers on a daily basis.

Describe how the proposed project creates economic opportunities for the local community: The project in and of itself does not create economic opportunities, but it does facilitate access to economic opportunities by enabling residents to be able to travel to their places of employment (employed residents) or potential places of employment (jobseekers). Further, residents will be able to continue to frequent local businesses including gas stations, grocery stores, restaurants, and other small locally owned businesses which rely on their customer bases to remain solvent and drive the local economy.

Does this project disproportionately impact vulnerable populations in the local community? No

Does the proposed project align with investments from other state or local capital improvements and infrastructure development efforts? Yes

Does the proposed project employ adaptable and reliable technology to guard against premature obsolescence? Yes

Describe the applicant's overall mitigation plan and how the project addressed in this application furthers that plan: The proposed mitigation effort, modification to the identified roadway segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: "Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards " (p.270)

Describe how the proposed project will contribute to the community's resiliency against future disasters as a result of these projects: Replacing the asphalt roadway segment with concrete will mitigate against future risk by minimizing the impacts of excessive coastal storm surge and runoff, negating the creation of urban heat islands, and ensuring residents are able to travel unimpeded to the nearest identified evacuation route should hurricane force winds and accompanying rain be forecasted.

San Leon-19th Street Improvements

Project Info

Project Information

DRGR Activity: Street Improvements

Project Type: Street Improvements

Project Title: San Leon-19th Street Improvements

Does this project include replacement or relocation of a facility (i.e., lift station, water treatment plant, etc.)? No

Provide a detailed description of the scope of work proposed. For proposed work involving a length of road, ditch, channel, etc., report the scope of the project in linear feet (lf): San Leon, a small community of approximately 6,000 in Galveston County, has a lengthy history of being impacted by natural hazards. Much like its neighboring communities of Bacliff and Dickinson, it is prone to frequent flooding. This is largely attributed to its geographic location, elevation relative to Galveston Bay, poor drainage systems, and development over the years. First Street Foundation, a notable non-profit think tank, assessed overall flood risk throughout Texas and found that the Galveston Bay-side communities of San Leon, Bacliff and Dickinson are among the 10 most at-risk places for flooding in Texas. More than 99 percent of the homes in the three communities and more than 97 percent of all roads, as well as every commercial building, piece of public infrastructure and social facility, such as a house of worship or schools, are at risk of flooding. In response to the San Leon's identified flood risk, this flood resistant street improvement entails the replacement of 765 LF of existing asphalt roadway with 765 LF of more durable concrete pavement from the intersection of 19th Street and Ave K to the intersection of 19th Street and Avenue J (Start: 29.481972, -94.933778; Midpoint: 29.482833, -94.933472; End: 29.483694, -94.933306.

Once design and engineering are complete and required permits received, equipment, materials, and personnel will be mobilized to the site. The roadway will be closed to traffic and the existing asphalt road surface and base material will be removed using a stabilizer/reclaimer. The subbase will then be stabilized with lime to reduce the plasticity of the clay. The subbase will then be cured using a light fog spray of water or bituminous curing agent at a rate of 0.15 to 0.25 gal/yd2. If the construction contractor determines that trimming of the cement-treated subbase is unavoidable, just before paving, the surface will be treated to prevent bonding of the base to the surface. The applicable bond breakers may include reapplication of the bituminous curing agent with a thin layer of sand or the application of two coats of wax-based curing compound. The reinforced concrete pavement will then be formed and placed over the base and subbase. The concrete pavement will be six inches in uniform thickness, with 5.0 sacks of Portland Cement used per cubic yard and will be reinforced with #4 (1/2") deformed steel reinforcing bars spaced a maximum of 18" center to center each way. Once cured and tested, equipment, personnel and excess materials will be transported from the project site, and the roadway will be reopened to traffic.

White	591	2,035	2,626
Some Other Race	46	15	61
Other Multi-Racial	0	0	0
Native Hawaiian / Other Pacific Islander	0	0	0
American Indian/Alaskan Native/Black African American	0	0	0

Race	Hispanic Population	Non-Hispanic Population	Total Population
American Indian/Alaskan Native	10	16	26

Which HUD national objective does the project meet? LMI

Describe activities that benefit low- and moderate-income people: A significant portion of the census blocks are comprised of low to moderate income people. Ensuring the roadway is accessible to local residents will enable timely travel to the nearest evacuation route should hurricane force winds/accompanying rain be forecasted.

Method(s) used to determine the beneficiaries: LMI Area Benefit

What method was used for Beneficiary Identification? Census (HUD LMISD)

Provide a brief description of the beneficiary identification method used to determine this national objective and upload supporting beneficiary maps, census data, and/or survey documents: The beneficiary population was determined through a geospatial analysis of the most recent census block data using the American Community Survey Summary File Retrieval Tool and ArcGIS.

U.S. Congressional District #: 14

Texas Representative District #: 23

Texas Senate District #: 11

Environmental

What is the current status of the project? Not yet begun

Will the assistance requested have any negative impact(s) or effect(s) on the environment? No

Is the proposed project likely to require an archaeological assessment? No

Is the proposed site(s) listed on the National Register of Historic Places? No

Is the project in a designated floodway or coastal high hazard area? No

Is the project in a designated special flood hazard area or a designated wetland? Yes

For projects in the 500 or 100-year floodplain: Does your project involve a critical action as defined in 24CFR55.2(b)(3)? No

Is any project site located in a known critical habitat for endangered species? No

Is any project site a known hazardous site? No

Is any project site located on federal lands or at a federal installation? No

Is any project site subject to or participating in Fixing America's Surface Transportation Act (FAST-41) (P.L. 114-94)? No

What level of environmental review is likely needed for this project? Environmental Assessment

Provide any additional detail or information relevant to Environmental Review: Galveston County does not anticipate that the proposed project will have any negative environmental consequences as the activity (replacing asphalt with concrete) replaces an equal amount of material along the same amount of linear feet of existing roadway. No new ground disturbance will occur.

Provide a brief narrative regarding how CDBG-MIT funding is to be used. Demonstrate that HUD CDBG environmental requirements have been met to date:

Permits

Does the project require any federal, state, or other permits, approvals, or waivers to complete the proposed work? No

If yes, describe the type and purpose of each permit and its association with the proposed project. Provide a copy of each permit already executed:

Does the project require any type of ratified, legally binding agreement between the applicant and any other entity to provide continual operation upon completion? No

If yes, describe the type and purpose of each agreement and its association with the proposed project. Provide a copy of each agreement already executed or drafted:

For sewer and/or water facilities projects, does the applicant currently hold the Certificate of Convenience and Necessity (CCN) for the target area proposed in the application? (If not a sewer and/or water facilities project, please choose N/A): N/A

Budget Activity Lines

Program Budget Code	Planned/Requested Amount	Planned Other Funds Amount	Total	Percent of Total
Planning	$0.00	$0.00	$0.00	0%
Acquisition	$0.00	$0.00	$0.00	0%
Environmental	$0.00	$0.00	$0.00	0%
Special Environmental	$0.00	$0.00	$0.00	0%
Grant Administration	$6,650.61	$0.00	$6,650.61	4.8%
Engineering	$6,333.91	$0.00	$6,333.91	4.5%
Construction	$126,377.60	$0.00	$126,377.60	90.7%

Mitigation

Identify the specific risk the proposed project will mitigate against: Severe Coastal Flooding

Describe as to how the proposed project addresses/mitigates against the current and future risks identified: Replacing the asphalt roadway segment with concrete will mitigate against current and future risk by minimizing the impacts of excessive coastal storm surge and runoff, negating the creation of urban heat islands, and ensuring residents' access to a community lifeline which facilitates travel to the nearest identified evacuation route should hurricane force winds and accompanying rain be forecasted. The chosen construction material will be more resilient for the following reasons:

•Concrete is more resistant to heavy rainfall and flooding. Unlike asphalt which can deteriorate quickly when exposed to water, concrete remains stable and intact, reduction the need for frequent repairs and ensuring safer road conditions.

•Concrete's ability to reflect sunlight helps it remain cooler than asphalt, which absorbs and retains heat. With its higher albedo, concrete reflects more sunlight than asphalt, which absorbs heat. This property helps to keep urban areas cooler, combating the urban heat island effect.

•From an environmental perspective, concrete production emits fewer greenhouse gases compared to asphalt. Moreover, concrete can be recycled and reused in new construction projects, minimizing environmental impact and promoting sustainability.

•Concrete is less prone to rutting and deformation under heavy loads and high temperatures with a superior load-bearing capacity. This resistance ensures a more consistent and safer driving surface, reducing the risk of vehicle damage and accidents.

•Concrete streets boast a significantly longer lifespan than their asphalt counterparts. Typically, concrete roads can last between 20 to 40 years with minimal maintenance, whereas asphalt streets often require resurfacing and repairs every 10 to 15 years. This longevity makes concrete a cost-effective option in the long run.

Provide information about how the proposed mitigation efforts integrate into the community's emergency and resiliency plans: The project is aimed at mitigating the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: “Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards “ (p.270)

The proposed mitigation activity is also in concert with the goals of the Texas Water Development Board’s 2024 Texas Flood Plan which includes roadway safety and early warning system goals. The plan notes “This includes goals to improve safety at low water crossings, improve the level of service for exposed roadway segments, and increase the implementation of flood early warning systems for roadways and flood prone areas” (p.183). Further, the roadway improvements in the Bacliff and San Leon areas would complement Project #0611000436 on p.

31 of Volume II of the 2024 Texas State Flood Plan, which is an analysis of roadside ditch and driveway improvements in Bacliff and San Leon.

In addition, significant damage to the roadway segments would impede residents from being able to access the nearest hurricane evacuation route per Galveston County's Hurricane Evacuation Mapping (Houston-Galveston Area Council-Hurricane Evacuation | Galveston, TX - Official Website).

See the 2022 Galveston County Hazard Mitigation Plan reference document, Texas Flood Plan reference document, and the Houston-Galveston Area Council's Evacuation Route documentation.

In the space provided, list documentation provided to support the identification of the threat or hazard and how it relates to potential impact: The hazard was identified through consultation with the national weather service, a review of the NOAA storm events database, and review of the risk assessment within the hazard mitigation plan.

Provide a brief description of how the proposed project addresses an integrated approach to mitigation: This project demonstrates an integrated approach towards mitigation as the county takes part in local and regional planning efforts and considered this project within the context of those planning efforts to determine if the project was in concert with both local and mitigation goals, objectives and strategies. This was accomplished by considering a number of factors/indicators as the project was developed including local and regional community acceptance of the project; effects on local and regional populations; technical feasibility and secondary local and regional impacts; the degree of local and regional public and political support for the project; existing local and regional legal authorities; costs, benefits, and the project's contribution to the local and regional economy; and existing local and regional environmental laws, regulations and ordinances.

Considering the local evaluation of hazard risks, responsible floodplain management, future extreme weather/natural disaster events, and long-term risks, describe how the proposed project promotes sustainable community resilience: The project promotes sustainable community resilience as it affords unimpeded access to a critical community lifeline, transportation. This segment of roadway is a part of the overarching county and regional transportation infrastructure. Transportation, as with other community lifelines, enables the continuous operation of critical government and business functions and is essential to human health and safety or economic security. Unimpeded access to this community lifeline has the potential to save lives by facilitating first responder's egress and ingress to homes within the community and community members' access to emergency evacuation routes should hurricane force winds and rains be forecasted. The project promotes economic security as unimpeded access to transportation routes allows community members to maintain or seek employment and patronize local businesses.

Describe how the proposed project is consistent with local and regional planning efforts to effect disaster mitigation: The proposed mitigation effort, modification to the identified roadway segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: "Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard

events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards " (p.270)

The proposed mitigation activity is also in concert with the goals of the Texas Water Development Board's 2024 Texas Flood Plan which includes roadway safety and early warning system goals. The plan notes "This includes goals to improve safety at low water crossings, improve the level of service for exposed roadway segments, and increase the implementation of flood early warning systems for roadways and flood prone areas" (p.183). Further, the roadway improvements in the Bacliff and San Leon areas would complement Project #0611000436 on p. 31 of Volume II of the 2024 Texas State Flood Plan, which is an analysis of roadside ditch and driveway improvements in Bacliff and San Leon.

Was a cost-benefit analysis used in the selection of the proposed project? Yes

Describe how the proposed project impacts vulnerable populations in the local community.: Either the entire census block or a substantial portion of the census block consists of low to moderate income persons, which are vulnerable solely based on their socio-economic status. Replacing the roadway segments with a more durable flood-resistant material will enable residents to more readily access evacuation routes during inclement weather events and places of employment and community service providers on a daily basis.

Describe how the proposed project creates economic opportunities for the local community: The project in and of itself does not create economic opportunities, but it does facilitate access to economic opportunities by enabling residents to be able to travel to their places of employment (employed residents) or potential places of employment (jobseekers). Further, residents will be able to continue to frequent local businesses including gas stations, grocery stores, restaurants, and other small locally owned businesses which rely on their customer bases to remain solvent and drive the local economy.

Does this project disproportionately impact vulnerable populations in the local community? No

Does the proposed project align with investments from other state or local capital improvements and infrastructure development efforts? Yes

Does the proposed project employ adaptable and reliable technology to guard against premature obsolescence? Yes

Describe the applicant's overall mitigation plan and how the project addressed in this application furthers that plan: The proposed mitigation effort, modification to the identified roadway segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: "Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards " (p.270)

Describe how the proposed project will contribute to the community's resiliency against future disasters as a result of these projects: Replacing the asphalt roadway segment with concrete will mitigate against future risk by minimizing the impacts of excessive coastal storm surge and runoff, negating the creation of urban heat islands, and ensuring residents are able to travel unimpeded to the nearest identified evacuation route should hurricane force winds and accompanying rain be forecasted.

San Leon-20th Street Improvements

Project Info

Project Information

DRGR Activity: Street Improvements

Project Type: Street Improvements

Project Title: San Leon-20th Street Improvements

Does this project include replacement or relocation of a facility (i.e., lift station, water treatment plant, etc.)? No

Provide a detailed description of the scope of work proposed. For proposed work involving a length of road, ditch, channel, etc., report the scope of the project in linear feet (lf): San Leon, a small community of approximately 6,000 in Galveston County, has a lengthy history of being impacted by natural hazards. Much like its neighboring communities of Bacliff and Dickinson, it is prone to frequent flooding. This is largely attributed to its geographic location, elevation relative to Galveston Bay, poor drainage systems, and development over the years. First Street Foundation, a notable non-profit think tank, assessed overall flood risk throughout Texas and found that the Galveston Bay-side communities of San Leon, Bacliff and Dickinson are among the 10 most at-risk places for flooding in Texas. More than 99 percent of the homes in the three communities and more than 97 percent of all roads, as well as every commercial building, piece of public infrastructure and social facility, such as a house of worship or schools, are at risk of flooding. In response to the San Leon's identified flood risk, this flood resistant street improvement entails the replacement of 617 LF of existing asphalt roadway with 617 LF of more durable concrete pavement from the Intersection of 20th Street and FM 517 Road E to northern end of 20th Street (Start: 29.485639, -94.933722; Midpoint: 29.486278, -94.933528; End: 29.487, -94.933389).

Once design and engineering are complete and required permits received, equipment, materials, and personnel will be mobilized to the site. The roadway will be closed to traffic and the existing asphalt road surface and base material will be removed using a stabilizer/reclaimer. The subbase will then be stabilized with lime to reduce the plasticity of the clay. The subbase will then be cured using a light fog spray of water or bituminous curing agent at a rate of 0.15 to 0.25 gal/yd2. If the construction contractor determines that trimming of the cement-treated subbase is unavoidable, just before paving, the surface will be treated to prevent bonding of the base to the surface. The applicable bond breakers may include reapplication of the bituminous curing agent with a thin layer of sand or the application of two coats of wax-based curing compound. The reinforced concrete pavement will then be formed and placed over the base and subbase. The concrete pavement will be six inches in uniform thickness, with 5.0 sacks of Portland Cement used per cubic yard and will be reinforced with #4 (1/2") deformed steel reinforcing bars spaced a maximum of 18" center to center each way. Once cured and tested, equipment, personnel and excess materials will be transported from the project site, and the roadway will be reopened to traffic.

Site: Project Site Title	Site: Street Address
San Leon-20th Street Improvements	San Leon, 20th Street

Describe a plan for the long-term funding and management of the operations and maintenance of the project: Galveston County Road and Bridge Department is responsible for maintaining this road segment. Lee Crowder is the road administrator and ultimately responsible for ensuring all county roads are operated and maintained appropriately. The department ensures the road surfaces are cleaned throughout the year, as conditions require, any identified cracks are sealed, and the road segment is resealed in its entirety as needed. The current county budget already accounts for expenditures to maintain all county roads, including this segment.

Total proposed number of linear feet: 617

Total number of proposed public facilities:

Mitigation

Identify the specific risk the proposed project will mitigate against: Severe Coastal Flooding

Describe as to how the proposed project addresses/mitigates against the current and future risks identified: Replacing the asphalt roadway segment with concrete will mitigate against current and future risk by minimizing the impacts of excessive coastal storm surge and runoff, negating the creation of urban heat islands, and ensuring residents' access to a community lifeline which facilitates travel to the nearest identified evacuation route should hurricane force winds and accompanying rain be forecasted. The chosen construction material will be more resilient for the following reasons:

•Concrete is more resistant to heavy rainfall and flooding. Unlike asphalt which can deteriorate quickly when exposed to water, concrete remains stable and intact, reduction the need for frequent repairs and ensuring safer road conditions.

•Concrete's ability to reflect sunlight helps it remain cooler than asphalt, which absorbs and retains heat. With its higher albedo, concrete reflects more sunlight than asphalt, which absorbs heat. This property helps to keep urban areas cooler, combating the urban heat island effect.

•From an environmental perspective, concrete production emits fewer greenhouse gases compared to asphalt. Moreover, concrete can be recycled and reused in new construction projects, minimizing environmental impact and promoting sustainability.

•Concrete is less prone to rutting and deformation under heavy loads and high temperatures with a superior load-bearing capacity. This resistance ensures a more consistent and safer driving surface, reducing the risk of vehicle damage and accidents.

•Concrete streets boast a significantly longer lifespan than their asphalt counterparts. Typically, concrete roads can last between 20 to 40 years with minimal maintenance, whereas asphalt streets often require resurfacing and repairs every 10 to 15 years. This longevity makes concrete a cost-effective option in the long run.

Provide information about how the proposed mitigation efforts integrate into the community's emergency and resiliency plans: The proposed mitigation effort, modification to the identified roadway segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: “Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards “ (p.270)

The proposed mitigation activity is also in concert with the goals of the Texas Water Development Board’s 2024 Texas Flood Plan which includes roadway safety and early warning system goals. The plan notes “This includes goals to improve safety at low water crossings, improve the level of service for exposed roadway segments, and increase the implementation of flood early warning systems for roadways and flood prone areas” (p.183). Further, the roadway improvements in the Bacliff and San Leon areas would complement Project #0611000436 on p.

31 of Volume II of the 2024 Texas State Flood Plan, which is an analysis of roadside ditch and driveway improvements in Bacliff and San Leon.

In addition, significant damage to the roadway segments would impede residents from being able to access the nearest hurricane evacuation route per Galveston County's Hurricane Evacuation Mapping (Houston-Galveston Area Council-Hurricane Evacuation | Galveston, TX - Official Website).

See the 2022 Galveston County Hazard Mitigation Plan reference document, Texas Flood Plan reference document, and the Houston-Galveston Area Council's Evacuation Route documentation.

In the space provided, list documentation provided to support the identification of the threat or hazard and how it relates to potential impact: The hazard was identified through consultation with the national weather service, a review of the NOAA storm events database, and review of the risk assessment within the hazard mitigation plan.

Provide a brief description of how the proposed project addresses an integrated approach to mitigation: This project demonstrates an integrated approach towards mitigation as the county takes part in local and regional planning efforts and considered this project within the context of those planning efforts to determine if the project was in concert with both local and mitigation goals, objectives and strategies. This was accomplished by considering a number of factors/indicators as the project was developed including local and regional community acceptance of the project; effects on local and regional populations; technical feasibility and secondary local and regional impacts; the degree of local and regional public and political support for the project; existing local and regional legal authorities; costs, benefits, and the project's contribution to the local and regional economy; and existing local and regional environmental laws, regulations and ordinances.

Considering the local evaluation of hazard risks, responsible floodplain management, future extreme weather/natural disaster events, and long-term risks, describe how the proposed project promotes sustainable community resilience: The project promotes sustainable community resilience as it affords unimpeded access to a critical community lifeline, transportation. This segment of roadway is a part of the overarching county and regional transportation infrastructure. Transportation, as with other community lifelines, enables the continuous operation of critical government and business functions and is essential to human health and safety or economic security. Unimpeded access to this community lifeline has the potential to save lives by facilitating first responder's egress and ingress to homes within the community and community members' access to emergency evacuation routes should hurricane force winds and rains be forecasted. The project promotes economic security as unimpeded access to transportation routes allows community members to maintain or seek employment and patronize local businesses.

Describe how the proposed project is consistent with local and regional planning efforts to effect disaster mitigation: The proposed mitigation effort, modification to the identified roadway segments to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: "Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard

events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards " (p.270)

The proposed mitigation activity is also in concert with the goals of the Texas Water Development Board's 2024 Texas Flood Plan which includes roadway safety and early warning system goals. The plan notes "This includes goals to improve safety at low water crossings, improve the level of service for exposed roadway segments, and increase the implementation of flood early warning systems for roadways and flood prone areas" (p.183). Further, the roadway improvements in the Bacliff and San Leon areas would complement Project #0611000436 on p. 31 of Volume II of the 2024 Texas State Flood Plan, which is an analysis of roadside ditch and driveway improvements in Bacliff and San Leon.

Was a cost-benefit analysis used in the selection of the proposed project? Yes

Describe how the proposed project impacts vulnerable populations in the local community.: Either the entire census block or a substantial portion of the census block consists of low to moderate income persons, which are vulnerable solely based on their socio-economic status. Replacing the roadway segments with a more durable flood-resistant material will enable residents to more readily access evacuation routes during inclement weather events and places of employment and community service providers on a daily basis.

Describe how the proposed project creates economic opportunities for the local community: The project in and of itself does not create economic opportunities, but it does facilitate access to economic opportunities by enabling residents to be able to travel to their places of employment (employed residents) or potential places of employment (jobseekers). Further, residents will be able to continue to frequent local businesses including gas stations, grocery stores, restaurants, and other small locally owned businesses which rely on their customer bases to remain solvent and drive the local economy.

Does this project disproportionately impact vulnerable populations in the local community? No

Does the proposed project align with investments from other state or local capital improvements and infrastructure development efforts? Yes

Does the proposed project employ adaptable and reliable technology to guard against premature obsolescence? Yes

Describe the applicant's overall mitigation plan and how the project addressed in this application furthers that plan: The proposed mitigation effort, modification to the identified roadway segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: "Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards " (p.270)

Describe how the proposed project will contribute to the community's resiliency against future disasters as a result of these projects: Replacing the asphalt roadway segment with concrete will mitigate against future risk by minimizing the impacts of excessive coastal storm surge and runoff, negating the creation of urban heat islands, and ensuring residents are able to travel unimpeded to the nearest identified evacuation route should hurricane force winds and accompanying rain be forecasted.

San Leon-Avenue J Street Improvements

Project Info

Project Information

DRGR Activity: Street Improvements

Project Type: Street Improvements

Project Title: San Leon-Avenue J Street Improvements

Does this project include replacement or relocation of a facility (i.e., lift station, water treatment plant, etc.)? No

Provide a detailed description of the scope of work proposed. For proposed work involving a length of road, ditch, channel, etc., report the scope of the project in linear feet (lf): San Leon, a small community of approximately 6,000 in Galveston County, has a lengthy history of being impacted by natural hazards. Much like its neighboring communities of Bacliff and Dickinson, it is prone to frequent flooding. This is largely attributed to its geographic location, elevation relative to Galveston Bay, poor drainage systems, and development over the years. First Street Foundation, a notable non-profit think tank, assessed overall flood risk throughout Texas and found that the Galveston Bay-side communities of San Leon, Bacliff and Dickinson are among the 10 most at-risk places for flooding in Texas. More than 99 percent of the homes in the three communities and more than 97 percent of all roads, as well as every commercial building, piece of public infrastructure and social facility, such as a house of worship or schools, are at risk of flooding. In response to the San Leon's identified flood risk, this flood resistant street improvement entails the replacement of 378 LF of existing asphalt roadway with 378 LF of more durable concrete pavement from the intersection of 20th Street and Ave J to the intersection of 19th Street & Ave J (Start: 29.483889, -94.934194; Midpoint: 29.483833, -94.933806; End: 29.483694, -94.93325)

Once design and engineering are complete and required permits received, equipment, materials, and personnel will be mobilized to the site. The roadway will be closed to traffic and the existing asphalt road surface and base material will be removed using a stabilizer/reclaimer. The subbase will then be stabilized with lime to reduce the plasticity of the clay. The subbase will then be cured using a light fog spray of water or bituminous curing agent at a rate of 0.15 to 0.25 gal/yd2. If the construction contractor determines that trimming of the cement-treated subbase is unavoidable, just before paving, the surface will be treated to prevent bonding of the base to the surface. The applicable bond breakers may include reapplication of the bituminous curing agent with a thin layer of sand or the application of two coats of wax-based curing compound. The reinforced concrete pavement will then be formed and placed over the base and subbase. The concrete pavement will be six inches in uniform thickness, with 5.0 sacks of Portland Cement used per cubic yard and will be reinforced with #4 (1/2") deformed steel reinforcing bars spaced a maximum of 18" center to center each way. Once cured and tested, equipment, personnel and excess materials will be transported from the project site, and the roadway will be reopened to traffic.

Site: Project Site Title	Site: Street Address
San Leon-Avenue J Improvements	San Leon, Avenue J

Describe a plan for the long-term funding and management of the operations and maintenance of the project: Galveston County Road and Bridge Department is responsible for maintaining this road segment. Lee Crowder is the road administrator and ultimately responsible for ensuring all county roads are operated and maintained appropriately. The department ensures the road surfaces are cleaned throughout the year, as conditions require, any identified cracks are sealed, and the road segment is resealed in its entirety as needed. The current county budget already accounts for expenditures to maintain all county roads, including this segment.

Total proposed number of linear feet: 378

Total number of proposed public facilities:

Project Phase	Start Date	End Date	Length (in months)
Contract Closeout	08-01-2027	11-01-2027	3

Which HUD national objective does the project meet? LMI

Describe activities that benefit low- and moderate-income people: A significant portion of the census block is comprised of low to moderate income people. Ensuring the roadway is accessible to local residents will enable timely travel to the nearest evacuation route should hurricane force winds/accompanying rain be forecasted.

Method(s) used to determine the beneficiaries: LMI Area Benefit

What method was used for Beneficiary Identification? Census (HUD LMISD)

Provide a brief description of the beneficiary identification method used to determine this national objective and upload supporting beneficiary maps, census data, and/or survey documents: The beneficiary population was determined through a geospatial analysis of the most recent census block data using the American Community Survey Summary File Retrieval Tool and ArcGIS.

U.S. Congressional District #: 14

Texas Representative District #: 23

Texas Senate District #: 11

Environmental

What is the current status of the project? Not yet begun

Will the assistance requested have any negative impact(s) or effect(s) on the environment? No

Is the proposed project likely to require an archaeological assessment? No

Is the proposed site(s) listed on the National Register of Historic Places? No

Is the project in a designated floodway or coastal high hazard area? No

Is the project in a designated special flood hazard area or a designated wetland? Yes

For projects in the 500 or 100-year floodplain: Does your project involve a critical action as defined in 24CFR55.2(b)(3)? No

Is any project site located in a known critical habitat for endangered species? No

Is any project site a known hazardous site? No

Is any project site located on federal lands or at a federal installation? No

Is any project site subject to or participating in Fixing America's Surface Transportation Act (FAST-41) (P.L. 114-94)? No

What level of environmental review is likely needed for this project? Environmental Assessment

Provide any additional detail or information relevant to Environmental Review: Galveston County does not anticipate that the proposed project will have any negative environmental consequences as the activity (replacing asphalt with concrete) replaces an equal amount of material along the same amount of linear feet of existing roadway. No new ground disturbance will occur.

Provide a brief narrative regarding how CDBG-MIT funding is to be used. Demonstrate that HUD CDBG environmental requirements have been met to date:

Permits

Does the project require any federal, state, or other permits, approvals, or waivers to complete the proposed work? No

If yes, describe the type and purpose of each permit and its association with the proposed project. Provide a copy of each permit already executed:

Does the project require any type of ratified, legally binding agreement between the applicant and any other entity to provide continual operation upon completion? No

If yes, describe the type and purpose of each agreement and its association with the proposed project. Provide a copy of each agreement already executed or drafted:

For sewer and/or water facilities projects, does the applicant currently hold the Certificate of Convenience and Necessity (CCN) for the target area proposed in the application? (If not a sewer and/or water facilities project, please choose N/A): N/A

Budget Activity Lines

Program Budget Code	Planned/Requested Amount	Planned Other Funds Amount	Total	Percent of Total
Planning	$0.00	$0.00	$0.00	0%
Acquisition	$0.00	$0.00	$0.00	0%

Construction	$62,643.52	$0.00	$62,643.52	90.7%

Mitigation

Identify the specific risk the proposed project will mitigate against: Severe Coastal Flooding

Describe as to how the proposed project addresses/mitigates against the current and future risks identified: Replacing the asphalt roadway segment with concrete will mitigate against current and future risk by minimizing the impacts of excessive coastal storm surge and runoff, negating the creation of urban heat islands, and ensuring residents' access to a community lifeline which facilitates travel to the nearest identified evacuation route should hurricane force winds and accompanying rain be forecasted. The chosen construction material will be more resilient for the following reasons:

•Concrete is more resistant to heavy rainfall and flooding. Unlike asphalt which can deteriorate quickly when exposed to water, concrete remains stable and intact, reduction the need for frequent repairs and ensuring safer road conditions.

•Concrete's ability to reflect sunlight helps it remain cooler than asphalt, which absorbs and retains heat. With its higher albedo, concrete reflects more sunlight than asphalt, which absorbs heat. This property helps to keep urban areas cooler, combating the urban heat island effect.

•From an environmental perspective, concrete production emits fewer greenhouse gases compared to asphalt. Moreover, concrete can be recycled and reused in new construction projects, minimizing environmental impact and promoting sustainability.

•Concrete is less prone to rutting and deformation under heavy loads and high temperatures with a superior load-bearing capacity. This resistance ensures a more consistent and safer driving surface, reducing the risk of vehicle damage and accidents.

•Concrete streets boast a significantly longer lifespan than their asphalt counterparts. Typically, concrete roads can last between 20 to 40 years with minimal maintenance, whereas asphalt streets often require resurfacing and repairs every 10 to 15 years. This longevity makes concrete a cost-effective option in the long run.

Provide information about how the proposed mitigation efforts integrate into the community's emergency and resiliency plans: The proposed mitigation effort, modification to the identified roadway segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: “Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards “ (p.270)

The proposed mitigation activity is also in concert with the goals of the Texas Water Development Board’s 2024 Texas Flood Plan which includes roadway safety and early warning system goals. The plan notes “This includes goals to improve safety at low water crossings, improve the level of service for exposed roadway segments, and increase the implementation of flood early warning systems for roadways and flood prone areas” (p.183). Further, the roadway improvements in the Bacliff and San Leon areas would complement Project #0611000436 on p.

31 of Volume II of the 2024 Texas State Flood Plan, which is an analysis of roadside ditch and driveway improvements in Bacliff and San Leon.

In addition, significant damage to the roadway segments would impede residents from being able to access the nearest hurricane evacuation route per Galveston County's Hurricane Evacuation Mapping (Houston-Galveston Area Council-Hurricane Evacuation | Galveston, TX - Official Website).

See the 2022 Galveston County Hazard Mitigation Plan reference document, Texas Flood Plan reference document, and the Houston-Galveston Area Council's Evacuation Route documentation.

In the space provided, list documentation provided to support the identification of the threat or hazard and how it relates to potential impact: The hazard was identified through consultation with the national weather service, a review of the NOAA storm events database, and review of the risk assessment within the hazard mitigation plan.

Provide a brief description of how the proposed project addresses an integrated approach to mitigation: This project demonstrates an integrated approach towards mitigation as the county takes part in local and regional planning efforts and considered this project within the context of those planning efforts to determine if the project was in concert with both local and mitigation goals, objectives and strategies. This was accomplished by considering a number of factors/indicators as the project was developed including local and regional community acceptance of the project; effects on local and regional populations; technical feasibility and secondary local and regional impacts; the degree of local and regional public and political support for the project; existing local and regional legal authorities; costs, benefits, and the project's contribution to the local and regional economy; and existing local and regional environmental laws, regulations and ordinances.

Considering the local evaluation of hazard risks, responsible floodplain management, future extreme weather/natural disaster events, and long-term risks, describe how the proposed project promotes sustainable community resilience: The project promotes sustainable community resilience as it affords unimpeded access to a critical community lifeline, transportation. This segment of roadway is a part of the overarching county and regional transportation infrastructure. Transportation, as with other community lifelines, enables the continuous operation of critical government and business functions and is essential to human health and safety or economic security. Unimpeded access to this community lifeline has the potential to save lives by facilitating first responder's egress and ingress to homes within the community and community members' access to emergency evacuation routes should hurricane force winds and rains be forecasted. The project promotes economic security as unimpeded access to transportation routes allows community members to maintain or seek employment and patronize local businesses.

Describe how the proposed project is consistent with local and regional planning efforts to effect disaster mitigation: The proposed mitigation effort, modification to the identified roadway segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: "Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard

events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards " (p.270)

The proposed mitigation activity is also in concert with the goals of the Texas Water Development Board's 2024 Texas Flood Plan which includes roadway safety and early warning system goals. The plan notes "This includes goals to improve safety at low water crossings, improve the level of service for exposed roadway segments, and increase the implementation of flood early warning systems for roadways and flood prone areas" (p.183). Further, the roadway improvements in the Bacliff and San Leon areas would complement Project #0611000436 on p. 31 of Volume II of the 2024 Texas State Flood Plan, which is an analysis of roadside ditch and driveway improvements in Bacliff and San Leon.

Was a cost-benefit analysis used in the selection of the proposed project? Yes

Describe how the proposed project impacts vulnerable populations in the local community.: Either the entire census block or a substantial portion of the census block consists of low to moderate income persons, which are vulnerable solely based on their socio-economic status. Replacing the roadway segments with a more durable flood-resistant material will enable residents to more readily access evacuation routes during inclement weather events and places of employment and community service providers on a daily basis.

Describe how the proposed project creates economic opportunities for the local community: Either the entire census block or a substantial portion of the census block consists of low to moderate income persons, which are vulnerable solely based on their socio-economic status. Replacing the roadway segments with a more durable flood-resistant material will enable residents to more readily access evacuation routes during inclement weather events and places of employment and community service providers on a daily basis.

Does this project disproportionately impact vulnerable populations in the local community? No

Does the proposed project align with investments from other state or local capital improvements and infrastructure development efforts? Yes

Does the proposed project employ adaptable and reliable technology to guard against premature obsolescence? Yes

Describe the applicant's overall mitigation plan and how the project addressed in this application furthers that plan: The proposed mitigation effort, modification to the identified roadway segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: "Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards " (p.270)

Describe how the proposed project will contribute to the community's resiliency against future disasters as a result of these projects: Replacing the asphalt roadway segment with concrete will mitigate against future risk by minimizing the impacts of excessive coastal storm surge and runoff, negating the creation of urban heat islands, and ensuring residents are able to travel unimpeded to the nearest identified evacuation route should hurricane force winds and accompanying rain be forecasted.

San Leon-Avenue K Street Improvements

Project Info

Project Information

DRGR Activity: Street Improvements

Project Type: Street Improvements

Project Title: San Leon-Avenue K Street Improvements

Does this project include replacement or relocation of a facility (i.e., lift station, water treatment plant, etc.)? No

Provide a detailed description of the scope of work proposed. For proposed work involving a length of road, ditch, channel, etc., report the scope of the project in linear feet (lf): San Leon, a small community of approximately 6,000 in Galveston County, has a lengthy history of being impacted by natural hazards. Much like its neighboring communities of Bacliff and Dickinson, it is prone to frequent flooding. This is largely attributed to its geographic location, elevation relative to Galveston Bay, poor drainage systems, and development over the years. First Street Foundation, a notable non-profit think tank, assessed overall flood risk throughout Texas and found that the Galveston Bay-side communities of San Leon, Bacliff and Dickinson are among the 10 most at-risk places for flooding in Texas. More than 99 percent of the homes in the three communities and more than 97 percent of all roads, as well as every commercial building, piece of public infrastructure and social facility, such as a house of worship or schools, are at risk of flooding. In response to the San Leon's identified flood risk, this flood resistant street improvement entails the replacement of 432 LF of existing asphalt roadway with 432 LF of more durable concrete pavement from the intersection of 20th Street and Ave K to the intersection of 19th Street and Avenue K (Start: 29.482139, -94.934778; Midpoint: 29.482056, -94.934306; End: 29.481861, -94.933694).

Once design and engineering are complete and required permits received, equipment, materials, and personnel will be mobilized to the site. The roadway will be closed to traffic and the existing asphalt road surface and base material will be removed using a stabilizer/reclaimer. The subbase will then be stabilized with lime to reduce the plasticity of the clay. The subbase will then be cured using a light fog spray of water or bituminous curing agent at a rate of 0.15 to 0.25 gal/yd2. If the construction contractor determines that trimming of the cement-treated subbase is unavoidable, just before paving, the surface will be treated to prevent bonding of the base to the surface. The applicable bond breakers may include reapplication of the bituminous curing agent with a thin layer of sand or the application of two coats of wax-based curing compound. The reinforced concrete pavement will then be formed and placed over the base and subbase. The concrete pavement will be six inches in uniform thickness, with 5.0 sacks of Portland Cement used per cubic yard and will be reinforced with #4 (1/2") deformed steel reinforcing bars spaced a maximum of 18" center to center each way. Once cured and tested, equipment, personnel and excess materials will be transported from the project site, and the roadway will be reopened to traffic.

Site: Project Site Title	Site: Street Address
San Leon-Avenue K	San Leon, Avenue K

Describe a plan for the long-term funding and management of the operations and maintenance of the project: Galveston County Road and Bridge Department is responsible for maintaining this road segment. Lee Crowder is the road administrator and ultimately responsible for ensuring all county roads are operated and maintained appropriately. The department ensures the road surfaces are cleaned throughout the year, as conditions require, any identified cracks are sealed, and the road segment is resealed in its entirety as needed. The current county budget already accounts for expenditures to maintain all county roads, including this segment.

Mitigation

Identify the specific risk the proposed project will mitigate against: Severe Coastal Flooding

Describe as to how the proposed project addresses/mitigates against the current and future risks identified: Replacing the asphalt roadway segment with concrete will mitigate against current and future risk by minimizing the impacts of excessive coastal storm surge and runoff, negating the creation of urban heat islands, and ensuring residents' access to a community lifeline which facilitates travel to the nearest identified evacuation route should hurricane force winds and accompanying rain be forecasted. The chosen construction material will be more resilient for the following reasons:

•Concrete is more resistant to heavy rainfall and flooding. Unlike asphalt which can deteriorate quickly when exposed to water, concrete remains stable and intact, reduction the need for frequent repairs and ensuring safer road conditions.

•Concrete's ability to reflect sunlight helps it remain cooler than asphalt, which absorbs and retains heat. With its higher albedo, concrete reflects more sunlight than asphalt, which absorbs heat. This property helps to keep urban areas cooler, combating the urban heat island effect.

•From an environmental perspective, concrete production emits fewer greenhouse gases compared to asphalt. Moreover, concrete can be recycled and reused in new construction projects, minimizing environmental impact and promoting sustainability.

•Concrete is less prone to rutting and deformation under heavy loads and high temperatures with a superior load-bearing capacity. This resistance ensures a more consistent and safer driving surface, reducing the risk of vehicle damage and accidents.

•Concrete streets boast a significantly longer lifespan than their asphalt counterparts. Typically, concrete roads can last between 20 to 40 years with minimal maintenance, whereas asphalt streets often require resurfacing and repairs every 10 to 15 years. This longevity makes concrete a cost-effective option in the long run.

Provide information about how the proposed mitigation efforts integrate into the community's emergency and resiliency plans: The proposed mitigation effort, modification to the identified roadway segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: “Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards “ (p.270)

The proposed mitigation activity is also in concert with the goals of the Texas Water Development Board’s 2024 Texas Flood Plan which includes roadway safety and early warning system goals. The plan notes “This includes goals to improve safety at low water crossings, improve the level of service for exposed roadway segments, and increase the implementation of flood early warning systems for roadways and flood prone areas” (p.183). Further, the roadway improvements in the Bacliff and San Leon areas would complement Project #0611000436 on p.

31 of Volume II of the 2024 Texas State Flood Plan, which is an analysis of roadside ditch and driveway improvements in Bacliff and San Leon.

In addition, significant damage to the roadway segments would impede residents from being able to access the nearest hurricane evacuation route per Galveston County's Hurricane Evacuation Mapping (Houston-Galveston Area Council-Hurricane Evacuation | Galveston, TX - Official Website).

See the 2022 Galveston County Hazard Mitigation Plan reference document, Texas Flood Plan reference document, and the Houston-Galveston Area Council's Evacuation Route documentation.

In the space provided, list documentation provided to support the identification of the threat or hazard and how it relates to potential impact: The hazard was identified through consultation with the national weather service, a review of the NOAA storm events database, and review of the risk assessment within the hazard mitigation plan.

Provide a brief description of how the proposed project addresses an integrated approach to mitigation: This project demonstrates an integrated approach towards mitigation as the county takes part in local and regional planning efforts and considered this project within the context of those planning efforts to determine if the project was in concert with both local and mitigation goals, objectives and strategies. This was accomplished by considering a number of factors/indicators as the project was developed including local and regional community acceptance of the project; effects on local and regional populations; technical feasibility and secondary local and regional impacts; the degree of local and regional public and political support for the project; existing local and regional legal authorities; costs, benefits, and the project's contribution to the local and regional economy; and existing local and regional environmental laws, regulations and ordinances.

Considering the local evaluation of hazard risks, responsible floodplain management, future extreme weather/natural disaster events, and long-term risks, describe how the proposed project promotes sustainable community resilience: The project promotes sustainable community resilience as it affords unimpeded access to a critical community lifeline, transportation. This segment of roadway is a part of the overarching county and regional transportation infrastructure. Transportation, as with other community lifelines, enables the continuous operation of critical government and business functions and is essential to human health and safety or economic security. Unimpeded access to this community lifeline has the potential to save lives by facilitating first responder's egress and ingress to homes within the community and community members' access to emergency evacuation routes should hurricane force winds and rains be forecasted. The project promotes economic security as unimpeded access to transportation routes allows community members to maintain or seek employment and patronize local businesses.

Describe how the proposed project is consistent with local and regional planning efforts to effect disaster mitigation: The proposed mitigation effort, modification to the identified roadway segments to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: "Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard

events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards " (p.270)

The proposed mitigation activity is also in concert with the goals of the Texas Water Development Board's 2024 Texas Flood Plan which includes roadway safety and early warning system goals. The plan notes "This includes goals to improve safety at low water crossings, improve the level of service for exposed roadway segments, and increase the implementation of flood early warning systems for roadways and flood prone areas" (p.183). Further, the roadway improvements in the Bacliff and San Leon areas would complement Project #0611000436 on p. 31 of Volume II of the 2024 Texas State Flood Plan, which is an analysis of roadside ditch and driveway improvements in Bacliff and San Leon.

Was a cost-benefit analysis used in the selection of the proposed project? Yes

Describe how the proposed project impacts vulnerable populations in the local community.: Either the entire census block or a substantial portion of the census block consists of low to moderate income persons, which are vulnerable solely based on their socio-economic status. Replacing the roadway segments with a more durable flood-resistant material will enable residents to more readily access evacuation routes during inclement weather events and places of employment and community service providers on a daily basis.

Describe how the proposed project creates economic opportunities for the local community: The project in and of itself does not create economic opportunities, but it does facilitate access to economic opportunities by enabling residents to be able to travel to their places of employment (employed residents) or potential places of employment (jobseekers). Further, residents will be able to continue to frequent local businesses including gas stations, grocery stores, restaurants, and other small locally owned businesses which rely on their customer bases to remain solvent and drive the local economy.

Does this project disproportionately impact vulnerable populations in the local community? No

Does the proposed project align with investments from other state or local capital improvements and infrastructure development efforts? Yes

Does the proposed project employ adaptable and reliable technology to guard against premature obsolescence? Yes

Describe the applicant's overall mitigation plan and how the project addressed in this application furthers that plan: The proposed mitigation effort, modification to the identified roadway segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: "Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards " (p.270)

Describe how the proposed project will contribute to the community's resiliency against future disasters as a result of these projects: Replacing the asphalt roadway segment with concrete will mitigate against future risk by minimizing the impacts of excessive coastal storm surge and runoff, negating the creation of urban heat islands, and ensuring residents are able to travel unimpeded to the nearest identified evacuation route should hurricane force winds and accompanying rain be forecasted.

Freddisville-Bayou Drive Street Improvements

Project Info

Project Information

DRGR Activity: Street Improvements

Project Type: Street Improvements

Project Title: Freddisville-Bayou Drive Street Improvements

Does this project include replacement or relocation of a facility (i.e., lift station, water treatment plant, etc.)? No

Provide a detailed description of the scope of work proposed. For proposed work involving a length of road, ditch, channel, etc., report the scope of the project in linear feet (lf): Hitchcock is a small town in Galveston County which has experienced frequent flooding from ran events and hurricanes, most notably after Hurricane Harvey whose impacts nearly bankrupted the community. In response to the Hitchcock's identified flood risk, this flood resistant street improvement entails the replacement of 1,674 LF of existing asphalt roadway with 1,674 LF of more durable concrete pavement from the eastern end of Bayou Drive to the iintersection of Bayou Drive and Crane Street(Start: 29.340889, -94.964; Midpoint: 29.339528, -94.965667; End: 29.33775, -94.969833)

Once design and engineering are complete and required permits received, equipment, materials, and personnel will be mobilized to the site. The roadway will be closed to traffic and the existing asphalt road surface and base material will be removed using a stabilizer/reclaimer. The subbase will then be stabilized with lime to reduce the plasticity of the clay. The subbase will then be cured using a light fog spray of water or bituminous curing agent at a rate of 0.15 to 0.25 gal/yd2. If the construction contractor determines that trimming of the cement-treated subbase is unavoidable, just before paving, the surface will be treated to prevent bonding of the base to the surface. The applicable bond breakers may include reapplication of the bituminous curing agent with a thin layer of sand or the application of two coats of wax-based curing compound. The reinforced concrete pavement will then be formed and placed over the base and subbase. The concrete pavement will be six inches in uniform thickness, with 5.0 sacks of Portland Cement used per cubic yard and will be reinforced with #4 (1/2") deformed steel reinforcing bars spaced a maximum of 18" center to center each way. Once cured and tested, equipment, personnel and excess materials will be transported from the project site, and the roadway will be reopened to traffic.

Site: Project Site Title	Site: Street Address
Freddiesville-Bayou Drive Street Improvements	Eastern end of Bayou Dr to intersection of Bayou Drive and Crane Street, Hitchcock, TX, 77563

Describe a plan for the long-term funding and management of the operations and maintenance of the project: Galveston County Road and Bridge Department is responsible for maintaining this road segment. Lee Crowder is the road administrator and ultimately

responsible for ensuring all county roads are operated and maintained appropriately. The department ensures the road surfaces are cleaned throughout the year, as conditions require, any identified cracks are sealed, and the road segment is resealed in its entirety as needed. The current county budget already accounts for expenditures to maintain all county roads, including this segment.

Total proposed number of linear feet: 1,674

Total number of proposed public facilities:

American Indian/Alaskan Native	25	16	41

Which HUD national objective does the project meet? LMI

Describe activities that benefit low- and moderate-income people: A significant portion of the census block is comprised of low to moderate income people. Ensuring the roadway is accessible to local residents will enable timely travel to the nearest evacuation route should hurricane force winds/accompanying rain be forecasted.

Method(s) used to determine the beneficiaries: LMI Area Benefit

What method was used for Beneficiary Identification? Census (HUD LMISD)

Provide a brief description of the beneficiary identification method used to determine this national objective and upload supporting beneficiary maps, census data, and/or survey documents: The beneficiary population was determined through a geospatial analysis of the most recent census block data using the American Community Survey Summary File Retrieval Tool and ArcGIS.

U.S. Congressional District #: 14

Texas Representative District #: 23

Texas Senate District #: 11

Environmental

What is the current status of the project? Not yet begun

Will the assistance requested have any negative impact(s) or effect(s) on the environment? No

Is the proposed project likely to require an archaeological assessment? No

Is the proposed site(s) listed on the National Register of Historic Places? No

Is the project in a designated floodway or coastal high hazard area? No

Is the project in a designated special flood hazard area or a designated wetland? Yes

For projects in the 500 or 100-year floodplain: Does your project involve a critical action as defined in 24CFR55.2(b)(3)? No

Is any project site located in a known critical habitat for endangered species? No

Is any project site a known hazardous site? No

Is any project site located on federal lands or at a federal installation? No

Is any project site subject to or participating in Fixing America's Surface Transportation Act (FAST-41) (P.L. 114-94)? No

What level of environmental review is likely needed for this project? Exempt

Provide any additional detail or information relevant to Environmental Review: Galveston County does not anticipate that the proposed project will have any negative environmental consequences as the activity (replacing asphalt with concrete) replaces an equal amount of material along the same amount of linear feet of existing roadway. No new ground disturbance will occur.

Provide a brief narrative regarding how CDBG-MIT funding is to be used. Demonstrate that HUD CDBG environmental requirements have been met to date:

Permits

Does the project require any federal, state, or other permits, approvals, or waivers to complete the proposed work? No

If yes, describe the type and purpose of each permit and its association with the proposed project. Provide a copy of each permit already executed:

Does the project require any type of ratified, legally binding agreement between the applicant and any other entity to provide continual operation upon completion? No

If yes, describe the type and purpose of each agreement and its association with the proposed project. Provide a copy of each agreement already executed or drafted:

For sewer and/or water facilities projects, does the applicant currently hold the Certificate of Convenience and Necessity (CCN) for the target area proposed in the application? (If not a sewer and/or water facilities project, please choose N/A): N/A

Mitigation

Identify the specific risk the proposed project will mitigate against: Severe Coastal Flooding

Describe as to how the proposed project addresses/mitigates against the current and future risks identified: Replacing the asphalt roadway segment with concrete will mitigate against current and future risk by minimizing the impacts of excessive coastal storm surge and runoff, negating the creation of urban heat islands, and ensuring residents' access to a community lifeline which facilitates travel to the nearest identified evacuation route should hurricane force winds and accompanying rain be forecasted. The chosen construction material will be more resilient for the following reasons:

•Concrete is more resistant to heavy rainfall and flooding. Unlike asphalt which can deteriorate quickly when exposed to water, concrete remains stable and intact, reduction the need for frequent repairs and ensuring safer road conditions.

•Concrete's ability to reflect sunlight helps it remain cooler than asphalt, which absorbs and retains heat. With its higher albedo, concrete reflects more sunlight than asphalt, which absorbs heat. This property helps to keep urban areas cooler, combating the urban heat island effect.

•From an environmental perspective, concrete production emits fewer greenhouse gases compared to asphalt. Moreover, concrete can be recycled and reused in new construction projects, minimizing environmental impact and promoting sustainability.

•Concrete is less prone to rutting and deformation under heavy loads and high temperatures with a superior load-bearing capacity. This resistance ensures a more consistent and safer driving surface, reducing the risk of vehicle damage and accidents.

•Concrete streets boast a significantly longer lifespan than their asphalt counterparts. Typically, concrete roads can last between 20 to 40 years with minimal maintenance, whereas asphalt streets often require resurfacing and repairs every 10 to 15 years. This longevity makes concrete a cost-effective option in the long run.

Provide information about how the proposed mitigation efforts integrate into the community's emergency and resiliency plans: The proposed mitigation effort, modification to the identified roadway segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: “Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards “ (p.270)

The proposed mitigation activity is also in concert with the goals of the Texas Water Development Board’s 2024 Texas Flood Plan which includes roadway safety and early warning system goals. The plan notes “This includes goals to improve safety at low water crossings, improve the level of service for exposed roadway segments, and increase the implementation of flood early warning systems for roadways and flood prone areas” (p.183). In addition, significant damage to the roadway segments would impede residents from being able to access

the nearest hurricane evacuation route per Galveston County's Hurricane Evacuation Mapping (Houston-Galveston Area Council-Hurricane Evacuation | Galveston, TX - Official Website).

See the 2022 Galveston County Hazard Mitigation Plan reference document, Texas Flood Plan reference document, and the Houston-Galveston Area Council's Evacuation Route documentation.

In the space provided, list documentation provided to support the identification of the threat or hazard and how it relates to potential impact: The hazard was identified through consultation with the national weather service, a review of the NOAA storm events database, and review of the risk assessment within the hazard mitigation plan.

Provide a brief description of how the proposed project addresses an integrated approach to mitigation: This project demonstrates an integrated approach towards mitigation as the county takes part in local and regional planning efforts and considered this project within the context of those planning efforts to determine if the project was in concert with both local and mitigation goals, objectives and strategies. This was accomplished by considering a number of factors/indicators as the project was developed including local and regional community acceptance of the project; effects on local and regional populations; technical feasibility and secondary local and regional impacts; the degree of local and regional public and political support for the project; existing local and regional legal authorities; costs, benefits, and the project's contribution to the local and regional economy; and existing local and regional environmental laws, regulations and ordinances.

Considering the local evaluation of hazard risks, responsible floodplain management, future extreme weather/natural disaster events, and long-term risks, describe how the proposed project promotes sustainable community resilience: The project promotes sustainable community resilience as it affords unimpeded access to a critical community lifeline, transportation. This segment of roadway is a part of the overarching county and regional transportation infrastructure. Transportation, as with other community lifelines, enables the continuous operation of critical government and business functions and is essential to human health and safety or economic security. Unimpeded access to this community lifeline has the potential to save lives by facilitating first responder's egress and ingress to homes within the community and community members' access to emergency evacuation routes should hurricane force winds and rains be forecasted. The project promotes economic security as unimpeded access to transportation routes allows community members to maintain or seek employment and patronize local businesses.

Describe how the proposed project is consistent with local and regional planning efforts to effect disaster mitigation: The proposed mitigation effort, modification to the identified roadway segmentsto minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: "Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards " (p.270)

The proposed mitigation activity is also in concert with the goals of the Texas Water Development Board's 2024 Texas Flood Plan which includes roadway safety and early warning system goals. The plan notes "This includes goals to improve safety at low water crossings,

improve the level of service for exposed roadway segments, and increase the implementation of flood early warning systems for roadways and flood prone areas" (p.183).

Was a cost-benefit analysis used in the selection of the proposed project? Yes

Describe how the proposed project impacts vulnerable populations in the local community.: Either the entire census block or a substantial portion of the census block consists of low to moderate income persons, which are vulnerable solely based on their socio-economic status. Replacing the roadway segments with a more durable flood-resistant material will enable residents to more readily access evacuation routes during inclement weather events and places of employment and community service providers on a daily basis.

Describe how the proposed project creates economic opportunities for the local community: The project in and of itself does not create economic opportunities, but it does facilitate access to economic opportunities by enabling residents to be able to travel to their places of employment (employed residents) or potential places of employment (jobseekers). Further, residents will be able to continue to frequent local businesses including gas stations, grocery stores, restaurants, and other small locally owned businesses which rely on their customer bases to remain solvent and drive the local economy.

Does this project disproportionately impact vulnerable populations in the local community? No

Does the proposed project align with investments from other state or local capital improvements and infrastructure development efforts? Yes

Does the proposed project employ adaptable and reliable technology to guard against premature obsolescence? Yes

Describe the applicant's overall mitigation plan and how the project addressed in this application furthers that plan: The proposed mitigation effort, modification to the identified roadway segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: "Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards " (p.270)

Describe how the proposed project will contribute to the community's resiliency against future disasters as a result of these projects: Replacing the asphalt roadway segment with concrete will mitigate against future risk by minimizing the impacts of excessive coastal storm surge and runoff, negating the creation of urban heat islands, and ensuring residents are able to travel unimpeded to the nearest identified evacuation route should hurricane force winds and accompanying rain be forecasted.

Mitigation

Identify the specific risk the proposed project will mitigate against: Severe Coastal Flooding

Describe as to how the proposed project addresses/mitigates against the current and future risks identified: Replacing the asphalt roadway segment with concrete will mitigate against current and future risk by minimizing the impacts of excessive coastal storm surge and runoff, negating the creation of urban heat islands, and ensuring residents' access to a community lifeline which facilitates travel to the nearest identified evacuation route should hurricane force winds and accompanying rain be forecasted. The chosen construction material will be more resilient for the following reasons:

•Concrete is more resistant to heavy rainfall and flooding. Unlike asphalt which can deteriorate quickly when exposed to water, concrete remains stable and intact, reduction the need for frequent repairs and ensuring safer road conditions.

•Concrete's ability to reflect sunlight helps it remain cooler than asphalt, which absorbs and retains heat. With its higher albedo, concrete reflects more sunlight than asphalt, which absorbs heat. This property helps to keep urban areas cooler, combating the urban heat island effect.

•From an environmental perspective, concrete production emits fewer greenhouse gases compared to asphalt. Moreover, concrete can be recycled and reused in new construction projects, minimizing environmental impact and promoting sustainability.

•Concrete is less prone to rutting and deformation under heavy loads and high temperatures with a superior load-bearing capacity. This resistance ensures a more consistent and safer driving surface, reducing the risk of vehicle damage and accidents.

•Concrete streets boast a significantly longer lifespan than their asphalt counterparts. Typically, concrete roads can last between 20 to 40 years with minimal maintenance, whereas asphalt streets often require resurfacing and repairs every 10 to 15 years. This longevity makes concrete a cost-effective option in the long run.

Provide information about how the proposed mitigation efforts integrate into the community's emergency and resiliency plans: The proposed mitigation effort, modification to the identified roadway segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: “Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards “ (p.270)

The proposed mitigation activity is also in concert with the goals of the Texas Water Development Board’s 2024 Texas Flood Plan which includes roadway safety and early warning system goals. The plan notes “This includes goals to improve safety at low water crossings, improve the level of service for exposed roadway segments, and increase the implementation of flood early warning systems for roadways and flood prone areas” (p.183). In addition, significant damage to the roadway segments would impede residents from being able to access

the nearest hurricane evacuation route per Galveston County's Hurricane Evacuation Mapping (Houston-Galveston Area Council-Hurricane Evacuation | Galveston, TX - Official Website).

See the 2022 Galveston County Hazard Mitigation Plan reference document, Texas Flood Plan reference document, and the Houston-Galveston Area Council's Evacuation Route documentation.

In the space provided, list documentation provided to support the identification of the threat or hazard and how it relates to potential impact: The hazard was identified through consultation with the national weather service, a review of the NOAA storm events database, and review of the risk assessment within the hazard mitigation plan.

Provide a brief description of how the proposed project addresses an integrated approach to mitigation: This project demonstrates an integrated approach towards mitigation as the county takes part in local and regional planning efforts and considered this project within the context of those planning efforts to determine if the project was in concert with both local and mitigation goals, objectives and strategies. This was accomplished by considering a number of factors/indicators as the project was developed including local and regional community acceptance of the project; effects on local and regional populations; technical feasibility and secondary local and regional impacts; the degree of local and regional public and political support for the project; existing local and regional legal authorities; costs, benefits, and the project's contribution to the local and regional economy; and existing local and regional environmental laws, regulations and ordinances.

Considering the local evaluation of hazard risks, responsible floodplain management, future extreme weather/natural disaster events, and long-term risks, describe how the proposed project promotes sustainable community resilience: The project promotes sustainable community resilience as it affords unimpeded access to a critical community lifeline, transportation. This segment of roadway is a part of the overarching county and regional transportation infrastructure. Transportation, as with other community lifelines, enables the continuous operation of critical government and business functions and is essential to human health and safety or economic security. Unimpeded access to this community lifeline has the potential to save lives by facilitating first responder's egress and ingress to homes within the community and community members' access to emergency evacuation routes should hurricane force winds and rains be forecasted. The project promotes economic security as unimpeded access to transportation routes allows community members to maintain or seek employment and patronize local businesses.

Describe how the proposed project is consistent with local and regional planning efforts to effect disaster mitigation: The proposed mitigation effort, modification to the identified roadway segments to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: "Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards " (p.270)

The proposed mitigation activity is also in concert with the goals of the Texas Water Development Board's 2024 Texas Flood Plan which includes roadway safety and early warning system goals. The plan notes "This includes goals to improve safety at low water crossings,

improve the level of service for exposed roadway segments, and increase the implementation of flood early warning systems for roadways and flood prone areas" (p.183).

Was a cost-benefit analysis used in the selection of the proposed project? Yes

Describe how the proposed project impacts vulnerable populations in the local community.: Either the entire census block or a substantial portion of the census block consists of low to moderate income persons, which are vulnerable solely based on their socio-economic status. Replacing the roadway segments with a more durable flood-resistant material will enable residents to more readily access evacuation routes during inclement weather events and places of employment and community service providers on a daily basis.

Describe how the proposed project creates economic opportunities for the local community: The project in and of itself does not create economic opportunities, but it does facilitate access to economic opportunities by enabling residents to be able to travel to their places of employment (employed residents) or potential places of employment (jobseekers). Further, residents will be able to continue to frequent local businesses including gas stations, grocery stores, restaurants, and other small locally owned businesses which rely on their customer bases to remain solvent and drive the local economy.

Does this project disproportionately impact vulnerable populations in the local community? No

Does the proposed project align with investments from other state or local capital improvements and infrastructure development efforts? Yes

Does the proposed project employ adaptable and reliable technology to guard against premature obsolescence? Yes

Describe the applicant's overall mitigation plan and how the project addressed in this application furthers that plan: The proposed mitigation effort, modification to the identified roadway segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: "Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards " (p.270)

Describe how the proposed project will contribute to the community's resiliency against future disasters as a result of these projects: Replacing the asphalt roadway segment with concrete will mitigate against future risk by minimizing the impacts of excessive coastal storm surge and runoff, negating the creation of urban heat islands, and ensuring residents are able to travel unimpeded to the nearest identified evacuation route should hurricane force winds and accompanying rain be forecasted.

Freddisville-WarrenWay Street Improvements

Project Info

Project Information

DRGR Activity: Street Improvements

Project Type: Street Improvements

Project Title: Freddisville-WarrenWay Street Improvements

Does this project include replacement or relocation of a facility (i.e., lift station, water treatment plant, etc.)? No

Provide a detailed description of the scope of work proposed. For proposed work involving a length of road, ditch, channel, etc., report the scope of the project in linear feet (lf): Hitchcock is a small town in Galveston County which has experienced frequent flooding from ran events and hurricanes, most notably after Hurricane Harvey whose impacts nearly bankrupted the community. In response to the Hitchcock's identified flood risk, this flood resistant street improvement entails the replacement of 719LF of existing asphalt roadway with 719LF of more durable concrete pavement from the beginning to the end of Warren Way (Start: 29.338444, -94.965389; Midpoint: 29.338778, -94.964722; End: 29.338111, -94.964306)

Once design and engineering are complete and required permits received, equipment, materials, and personnel will be mobilized to the site. The roadway will be closed to traffic and the existing asphalt road surface and base material will be removed using a stabilizer/reclaimer. The subbase will then be stabilized with lime to reduce the plasticity of the clay. The subbase will then be cured using a light fog spray of water or bituminous curing agent at a rate of 0.15 to 0.25 gal/yd2. If the construction contractor determines that trimming of the cement-treated subbase is unavoidable, just before paving, the surface will be treated to prevent bonding of the base to the surface. The applicable bond breakers may include reapplication of the bituminous curing agent with a thin layer of sand or the application of two coats of wax-based curing compound. The reinforced concrete pavement will then be formed and placed over the base and subbase. The concrete pavement will be six inches in uniform thickness, with 5.0 sacks of Portland Cement used per cubic yard and will be reinforced with #4 (1/2") deformed steel reinforcing bars spaced a maximum of 18" center to center each way. Once cured and tested, equipment, personnel and excess materials will be transported from the project site, and the roadway will be reopened to traffic.

Site: Project Site Title	Site: Street Address
Freddiesville-Warren Way Street Improvements	Warren Way, Freddiesville

Describe a plan for the long-term funding and management of the operations and maintenance of the project: Galveston County Road and Bridge Department is responsible for maintaining this road segment. Lee Crowder is the road administrator and ultimately responsible for ensuring all county roads are operated and maintained appropriately. The department ensures the road surfaces are cleaned throughout the year, as conditions require,

any identified cracks are sealed, and the road segment is resealed in its entirety as needed. The current county budget already accounts for expenditures to maintain all county roads, including this segment.

Total proposed number of linear feet: 719

Total number of proposed public facilities:

Project Phase	Start Date	End Date	Length (in months)

Which HUD national objective does the project meet? LMI

Describe activities that benefit low- and moderate-income people:

A significant portion of the census block is comprised of low to moderate income people. Ensuring the roadway is accessible to local residents will enable timely travel to the nearest evacuation route should hurricane force winds/accompanying rain be forecasted.

Method(s) used to determine the beneficiaries: LMI Area Benefit

What method was used for Beneficiary Identification? Census (HUD LMISD)

Provide a brief description of the beneficiary identification method used to determine this national objective and upload supporting beneficiary maps, census data, and/or survey documents: The beneficiary population was determined through a geospatial analysis of the most recent census block data using the American Community Survey Summary File Retrieval Tool and ArcGIS.

U.S. Congressional District #: 14

Texas Representative District #: 23

Texas Senate District #: 11

Environmental

What is the current status of the project? Not yet begun

Will the assistance requested have any negative impact(s) or effect(s) on the environment? No

Is the proposed project likely to require an archaeological assessment? No

Is the proposed site(s) listed on the National Register of Historic Places? No

Is the project in a designated floodway or coastal high hazard area? No

Is the project in a designated special flood hazard area or a designated wetland? Yes

For projects in the 500 or 100-year floodplain: Does your project involve a critical action as defined in 24CFR55.2(b)(3)? No

Is any project site located in a known critical habitat for endangered species? No

Is any project site a known hazardous site? No

Is any project site located on federal lands or at a federal installation? No

Is any project site subject to or participating in Fixing America's Surface Transportation Act (FAST-41) (P.L. 114-94)? No

What level of environmental review is likely needed for this project? Environmental Assessment

Provide any additional detail or information relevant to Environmental Review: Galveston County does not anticipate that the proposed project will have any negative environmental consequences as the activity (replacing asphalt with concrete) replaces an equal amount of material along the same amount of linear feet of existing roadway. No new ground disturbance will occur.

Provide a brief narrative regarding how CDBG-MIT funding is to be used. Demonstrate that HUD CDBG environmental requirements have been met to date:

Permits

Does the project require any federal, state, or other permits, approvals, or waivers to complete the proposed work? No

If yes, describe the type and purpose of each permit and its association with the proposed project. Provide a copy of each permit already executed:

Does the project require any type of ratified, legally binding agreement between the applicant and any other entity to provide continual operation upon completion? No

If yes, describe the type and purpose of each agreement and its association with the proposed project. Provide a copy of each agreement already executed or drafted:

For sewer and/or water facilities projects, does the applicant currently hold the Certificate of Convenience and Necessity (CCN) for the target area proposed in the application? (If not a sewer and/or water facilities project, please choose N/A): N/A

Engineering	$5,986.12	$0.00	$5,986.12	4.5%

Mitigation

Identify the specific risk the proposed project will mitigate against: Severe Coastal Flooding

Describe as to how the proposed project addresses/mitigates against the current and future risks identified: Replacing the asphalt roadway segment with concrete will mitigate against current and future risk by minimizing the impacts of excessive coastal storm surge and runoff, negating the creation of urban heat islands, and ensuring residents' access to a community lifeline which facilitates travel to the nearest identified evacuation route should hurricane force winds and accompanying rain be forecasted. The chosen construction material will be more resilient for the following reasons:

•Concrete is more resistant to heavy rainfall and flooding. Unlike asphalt which can deteriorate quickly when exposed to water, concrete remains stable and intact, reduction the need for frequent repairs and ensuring safer road conditions.

•Concrete's ability to reflect sunlight helps it remain cooler than asphalt, which absorbs and retains heat. With its higher albedo, concrete reflects more sunlight than asphalt, which absorbs heat. This property helps to keep urban areas cooler, combating the urban heat island effect.

•From an environmental perspective, concrete production emits fewer greenhouse gases compared to asphalt. Moreover, concrete can be recycled and reused in new construction projects, minimizing environmental impact and promoting sustainability.

•Concrete is less prone to rutting and deformation under heavy loads and high temperatures with a superior load-bearing capacity. This resistance ensures a more consistent and safer driving surface, reducing the risk of vehicle damage and accidents.

•Concrete streets boast a significantly longer lifespan than their asphalt counterparts. Typically, concrete roads can last between 20 to 40 years with minimal maintenance, whereas asphalt streets often require resurfacing and repairs every 10 to 15 years. This longevity makes concrete a cost-effective option in the long run.

Provide information about how the proposed mitigation efforts integrate into the community's emergency and resiliency plans: The proposed mitigation effort, modification to the identified roadway segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: “Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards “ (p.270)

The proposed mitigation activity is also in concert with the goals of the Texas Water Development Board’s 2024 Texas Flood Plan which includes roadway safety and early warning system goals. The plan notes “This includes goals to improve safety at low water crossings, improve the level of service for exposed roadway segments, and increase the implementation of flood early warning systems for roadways and flood prone areas” (p.183). In addition, significant damage to the roadway segments would impede residents from being able to access

the nearest hurricane evacuation route per Galveston County's Hurricane Evacuation Mapping (Houston-Galveston Area Council-Hurricane Evacuation | Galveston, TX - Official Website).

See the 2022 Galveston County Hazard Mitigation Plan reference document, Texas Flood Plan reference document, and the Houston-Galveston Area Council's Evacuation Route documentation.

In the space provided, list documentation provided to support the identification of the threat or hazard and how it relates to potential impact: The hazard was identified through consultation with the national weather service, a review of the NOAA storm events database, and review of the risk assessment within the hazard mitigation plan.

Provide a brief description of how the proposed project addresses an integrated approach to mitigation: This project demonstrates an integrated approach towards mitigation as the county takes part in local and regional planning efforts and considered this project within the context of those planning efforts to determine if the project was in concert with both local and mitigation goals, objectives and strategies. This was accomplished by considering a number of factors/indicators as the project was developed including local and regional community acceptance of the project; effects on local and regional populations; technical feasibility and secondary local and regional impacts; the degree of local and regional public and political support for the project; existing local and regional legal authorities; costs, benefits, and the project's contribution to the local and regional economy; and existing local and regional environmental laws, regulations and ordinances.

Considering the local evaluation of hazard risks, responsible floodplain management, future extreme weather/natural disaster events, and long-term risks, describe how the proposed project promotes sustainable community resilience: The project promotes sustainable community resilience as it affords unimpeded access to a critical community lifeline, transportation. This segment of roadway is a part of the overarching county and regional transportation infrastructure. Transportation, as with other community lifelines, enables the continuous operation of critical government and business functions and is essential to human health and safety or economic security. Unimpeded access to this community lifeline has the potential to save lives by facilitating first responder's egress and ingress to homes within the community and community members' access to emergency evacuation routes should hurricane force winds and rains be forecasted. The project promotes economic security as unimpeded access to transportation routes allows community members to maintain or seek employment and patronize local businesses.

Describe how the proposed project is consistent with local and regional planning efforts to effect disaster mitigation: The proposed mitigation effort, modification to the identified roadway segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: "Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards " (p.270)

The proposed mitigation activity is also in concert with the goals of the Texas Water Development Board's 2024 Texas Flood Plan which includes roadway safety and early warning system goals. The plan notes "This includes goals to improve safety at low water crossings,

improve the level of service for exposed roadway segments, and increase the implementation of flood early warning systems for roadways and flood prone areas" (p.183).

Was a cost-benefit analysis used in the selection of the proposed project? Yes

Describe how the proposed project impacts vulnerable populations in the local community.: Either the entire census block or a substantial portion of the census block consists of low to moderate income persons, which are vulnerable solely based on their socio-economic status. Replacing the roadway segments with a more durable flood-resistant material will enable residents to more readily access evacuation routes during inclement weather events and places of employment and community service providers on a daily basis.

Describe how the proposed project creates economic opportunities for the local community: The project in and of itself does not create economic opportunities, but it does facilitate access to economic opportunities by enabling residents to be able to travel to their places of employment (employed residents) or potential places of employment (jobseekers). Further, residents will be able to continue to frequent local businesses including gas stations, grocery stores, restaurants, and other small locally owned businesses which rely on their customer bases to remain solvent and drive the local economy.

Does this project disproportionately impact vulnerable populations in the local community? No

Does the proposed project align with investments from other state or local capital improvements and infrastructure development efforts? Yes

Does the proposed project employ adaptable and reliable technology to guard against premature obsolescence? Yes

Describe the applicant's overall mitigation plan and how the project addressed in this application furthers that plan: The proposed mitigation effort, modification to the identified roadway segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: "Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards " (p.270)

Describe how the proposed project will contribute to the community's resiliency against future disasters as a result of these projects: Replacing the asphalt roadway segment with concrete will mitigate against future risk by minimizing the impacts of excessive coastal storm surge and runoff, negating the creation of urban heat islands, and ensuring residents are able to travel unimpeded to the nearest identified evacuation route should hurricane force winds and accompanying rain be forecasted.

Hitchcock-Delesandri Drive Street Improvements

Project Info

Project Information

DRGR Activity: Street Improvements

Project Type: Street Improvements

Project Title: Hitchcock-Delesandri Drive Street Improvements

Does this project include replacement or relocation of a facility (i.e., lift station, water treatment plant, etc.)? No

Provide a detailed description of the scope of work proposed. For proposed work involving a length of road, ditch, channel, etc., report the scope of the project in linear feet (lf): Hitchcock is a small town in Galveston County which has experienced frequent flooding from ran events and hurricanes, most notably after Hurricane Harvey whose impacts nearly bankrupted the community. In response to the Hitchcock's identified flood risk, this flood resistant street improvement entails the replacement of 1,488 LF of existing asphalt roadway with 1,488 LF of more durable concrete pavement from the the intersection of Delesandri Drive and State Hwy 6 to the northern end of Delesandri Drive (Start: 29.483083, -94.922806; Midpoint: 29.333806, -94.948; End: 29.335472, -94.947806).

Once design and engineering are complete and required permits received, equipment, materials, and personnel will be mobilized to the site. Mitigation

Identify the specific risk the proposed project will mitigate against: Severe Coastal Flooding

Describe as to how the proposed project addresses/mitigates against the current and future risks identified: Replacing the asphalt roadway segment with concrete will mitigate against current and future risk by minimizing the impacts of excessive coastal storm surge and runoff, negating the creation of urban heat islands, and ensuring residents' access to a community lifeline which facilitates travel to the nearest identified evacuation route should hurricane force winds and accompanying rain be forecasted. The chosen construction material will be more resilient for the following reasons:

•Concrete is more resistant to heavy rainfall and flooding. Unlike asphalt which can deteriorate quickly when exposed to water, concrete remains stable and intact, reduction the need for frequent repairs and ensuring safer road conditions.

•Concrete's ability to reflect sunlight helps it remain cooler than asphalt, which absorbs and retains heat. With its higher albedo, concrete reflects more sunlight than asphalt, which absorbs heat. This property helps to keep urban areas cooler, combating the urban heat island effect.

•From an environmental perspective, concrete production emits fewer greenhouse gases compared to asphalt. Moreover, concrete can be recycled and reused in new construction projects, minimizing environmental impact and promoting sustainability.

•Concrete is less prone to rutting and deformation under heavy loads and high temperatures with a superior load-bearing capacity. This resistance ensures a more consistent and safer driving surface, reducing the risk of vehicle damage and accidents.

•Concrete streets boast a significantly longer lifespan than their asphalt counterparts. Typically, concrete roads can last between 20 to 40 years with minimal maintenance, whereas asphalt streets often require resurfacing and repairs every 10 to 15 years. This longevity makes concrete a cost-effective option in the long run.

Provide information about how the proposed mitigation efforts integrate into the community's emergency and resiliency plans: The proposed mitigation effort, modification to the identified roadway segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: “Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards “ (p.270)

The proposed mitigation activity is also in concert with the goals of the Texas Water Development Board’s 2024 Texas Flood Plan which includes roadway safety and early warning system goals. The plan notes “This includes goals to improve safety at low water crossings, improve the level of service for exposed roadway segments, and increase the implementation of flood early warning systems for roadways and flood prone areas” (p.183). In addition, significant damage to the roadway segments would impede residents from being able to access

the nearest hurricane evacuation route per Galveston County's Hurricane Evacuation Mapping (Houston-Galveston Area Council-Hurricane Evacuation | Galveston, TX - Official Website).

See the 2022 Galveston County Hazard Mitigation Plan reference document, Texas Flood Plan reference document, and the Houston-Galveston Area Council's Evacuation Route documentation.

In the space provided, list documentation provided to support the identification of the threat or hazard and how it relates to potential impact: The hazard was identified through consultation with the national weather service, a review of the NOAA storm events database, and review of the risk assessment within the hazard mitigation plan.

Provide a brief description of how the proposed project addresses an integrated approach to mitigation: This project demonstrates an integrated approach towards mitigation as the county takes part in local and regional planning efforts and considered this project within the context of those planning efforts to determine if the project was in concert with both local and mitigation goals, objectives and strategies. This was accomplished by considering a number of factors/indicators as the project was developed including local and regional community acceptance of the project; effects on local and regional populations; technical feasibility and secondary local and regional impacts; the degree of local and regional public and political support for the project; existing local and regional legal authorities; costs, benefits, and the project's contribution to the local and regional economy; and existing local and regional environmental laws, regulations and ordinances.

Considering the local evaluation of hazard risks, responsible floodplain management, future extreme weather/natural disaster events, and long-term risks, describe how the proposed project promotes sustainable community resilience: The project promotes sustainable community resilience as it affords unimpeded access to a critical community lifeline, transportation. This segment of roadway is a part of the overarching county and regional transportation infrastructure. Transportation, as with other community lifelines, enables the continuous operation of critical government and business functions and is essential to human health and safety or economic security. Unimpeded access to this community lifeline has the potential to save lives by facilitating first responder's egress and ingress to homes within the community and community members' access to emergency evacuation routes should hurricane force winds and rains be forecasted. The project promotes economic security as unimpeded access to transportation routes allows community members to maintain or seek employment and patronize local businesses.

Describe how the proposed project is consistent with local and regional planning efforts to effect disaster mitigation: The proposed mitigation effort, modification to the identified roadway segments to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: "Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards " (p.270)

The proposed mitigation activity is also in concert with the goals of the Texas Water Development Board's 2024 Texas Flood Plan which includes roadway safety and early warning system goals. The plan notes "This includes goals to improve safety at low water crossings,

improve the level of service for exposed roadway segments, and increase the implementation of flood early warning systems for roadways and flood prone areas" (p.183).

Was a cost-benefit analysis used in the selection of the proposed project? Yes

Describe how the proposed project impacts vulnerable populations in the local community.: Either the entire census block or a substantial portion of the census block consists of low to moderate income persons, which are vulnerable solely based on their socio-economic status. Replacing the roadway segments with a more durable flood-resistant material will enable residents to more readily access evacuation routes during inclement weather events and places of employment and community service providers on a daily basis.

Describe how the proposed project creates economic opportunities for the local community: The project in and of itself does not create economic opportunities, but it does facilitate access to economic opportunities by enabling residents to be able to travel to their places of employment (employed residents) or potential places of employment (jobseekers). Further, residents will be able to continue to frequent local businesses including gas stations, grocery stores, restaurants, and other small locally owned businesses which rely on their customer bases to remain solvent and drive the local economy.

Does this project disproportionately impact vulnerable populations in the local community? No

Does the proposed project align with investments from other state or local capital improvements and infrastructure development efforts? Yes

Does the proposed project employ adaptable and reliable technology to guard against premature obsolescence? Yes

Describe the applicant's overall mitigation plan and how the project addressed in this application furthers that plan: The proposed mitigation effort, modification to the identified roadway segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: "Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards " (p.270)

Describe how the proposed project will contribute to the community's resiliency against future disasters as a result of these projects: Replacing the asphalt roadway segment with concrete will mitigate against future risk by minimizing the impacts of excessive coastal storm surge and runoff, negating the creation of urban heat islands, and ensuring residents are able to travel unimpeded to the nearest identified evacuation route should hurricane force winds and accompanying rain be forecasted.

Hitchcock-Terrasso Drive Street Improvements

Project Info

Project Information

DRGR Activity: Street Improvements

Project Type: Street Improvements

Project Title: Hitchcock-Terrasso Drive Street Improvements

Does this project include replacement or relocation of a facility (i.e., lift station, water treatment plant, etc.)? No

Provide a detailed description of the scope of work proposed. For proposed work involving a length of road, ditch, channel, etc., report the scope of the project in linear feet (lf): Hitchcock is a small town in Galveston County which has experienced frequent flooding from ran events and hurricanes, most notably after Hurricane Harvey whose impacts nearly bankrupted the community. In response to the Hitchcock's identified flood risk, this flood resistant street improvement entails the replacement of 1,128 LF of existing asphalt roadway with 1,128 LF of more durable concrete pavement from the northern end of Terrasso Drive to the intersection of Delesandri Drive and Terrasso Drive (Start: 29.334333, -94.947028; Midpoint: 29.333306, -94.947139; End: 29.332583, -94.948111).

Once design and engineering are complete and required permits received, equipment, materials, and personnel will be mobilized to the site. The roadway will be closed to traffic and the existing asphalt road surface and base material will be removed using a stabilizer/reclaimer. The subbase will then be stabilized with lime to reduce the plasticity of the clay. The subbase will then be cured using a light fog spray of water or bituminous curing agent at a rate of 0.15 to 0.25 gal/yd2. If the construction contractor determines that trimming of the cement-treated subbase is unavoidable, just before paving, the surface will be treated to prevent bonding of the base to the surface. The applicable bond breakers may include reapplication of the bituminous curing agent with a thin layer of sand or the application of two coats of wax-based curing compound. The reinforced concrete pavement will then be formed and placed over the base and subbase. The concrete pavement will be six inches in uniform thickness, with 5.0 sacks of Portland Cement used per cubic yard and will be reinforced with #4 (1/2") deformed steel reinforcing bars spaced a maximum of 18" center to center each way. Once cured and tested, equipment, personnel and excess materials will be transported from the project site, and the roadway will be reopened to traffic.

Site: Project Site Title	Site: Street Address
Hitchcock-Terrasso Drive Street Improvements	Intersection of Delesandri Dr and State Hwy 6 to nothern end of Delesandri Dr, Hitchcock, TX, 77563

Describe a plan for the long-term funding and management of the operations and maintenance of the project: Galveston County Road and Bridge Department is responsible for maintaining this road segment. Lee Crowder is the road administrator and ultimately

responsible for ensuring all county roads are operated and maintained appropriately. The department ensures the road surfaces are cleaned throughout the year, as conditions require, any identified cracks are sealed, and the road segment is resealed in its entirety as needed. The current county budget already accounts for expenditures to maintain all county roads, including this segment.

Total proposed number of linear feet: 1,128

Total number of proposed public facilities:

Asian	0	0	0

Race	Hispanic Population	Non-Hispanic Population	Total Population
American Indian/Alaskan Native	0	23	23

Which HUD national objective does the project meet? LMI

Describe activities that benefit low- and moderate-income people: A significant portion of the census block is comprised of low to moderate income people. Ensuring the roadway is accessible to local residents will enable timely travel to the nearest evacuation route should hurricane force winds/accompanying rain be forecasted.

Method(s) used to determine the beneficiaries: LMI Area Benefit

What method was used for Beneficiary Identification? Census (HUD LMISD)

Provide a brief description of the beneficiary identification method used to determine this national objective and upload supporting beneficiary maps, census data, and/or survey documents: The beneficiary population was determined through a geospatial analysis of the most recent census block data using the American Community Survey Summary File Retrieval Tool and ArcGIS.

U.S. Congressional District #: 14

Texas Representative District #: 23

Texas Senate District #: 11

Environmental

What is the current status of the project? Not yet begun

Will the assistance requested have any negative impact(s) or effect(s) on the environment? No

Is the proposed project likely to require an archaeological assessment? No

Is the proposed site(s) listed on the National Register of Historic Places? No

Is the project in a designated floodway or coastal high hazard area? No

Is the project in a designated special flood hazard area or a designated wetland? Yes

For projects in the 500 or 100-year floodplain: Does your project involve a critical action as defined in 24CFR55.2(b)(3)? No

Is any project site located in a known critical habitat for endangered species? No

Is any project site a known hazardous site? No

Is any project site located on federal lands or at a federal installation? No

Is any project site subject to or participating in Fixing America's Surface Transportation Act (FAST-41) (P.L. 114-94)? No

What level of environmental review is likely needed for this project? Environmental Assessment

Provide any additional detail or information relevant to Environmental Review: Galveston County does not anticipate that the proposed project will have any negative environmental consequences as the activity (replacing asphalt with concrete) replaces an equal amount of material along the same amount of linear feet of existing roadway. No new ground disturbance will occur.

Provide a brief narrative regarding how CDBG-MIT funding is to be used. Demonstrate that HUD CDBG environmental requirements have been met to date:

Permits

Does the project require any federal, state, or other permits, approvals, or waivers to complete the proposed work? No

If yes, describe the type and purpose of each permit and its association with the proposed project. Provide a copy of each permit already executed:

Does the project require any type of ratified, legally binding agreement between the applicant and any other entity to provide continual operation upon completion? No

If yes, describe the type and purpose of each agreement and its association with the proposed project. Provide a copy of each agreement already executed or drafted:

For sewer and/or water facilities projects, does the applicant currently hold the Certificate of Convenience and Necessity (CCN) for the target area proposed in the application? (If not a sewer and/or water facilities project, please choose N/A): N/A

Budget Activity Lines

Construction	$203,523.52	$0.00	$203,523.52	90.7%

Mitigation

Identify the specific risk the proposed project will mitigate against: Severe Coastal Flooding

Describe as to how the proposed project addresses/mitigates against the current and future risks identified: Replacing the asphalt roadway segment with concrete will mitigate against current and future risk by minimizing the impacts of excessive coastal storm surge and runoff, negating the creation of urban heat islands, and ensuring residents' access to a community lifeline which facilitates travel to the nearest identified evacuation route should hurricane force winds and accompanying rain be forecasted. The chosen construction material will be more resilient for the following reasons:

•Concrete is more resistant to heavy rainfall and flooding. Unlike asphalt which can deteriorate quickly when exposed to water, concrete remains stable and intact, reduction the need for frequent repairs and ensuring safer road conditions.

•Concrete's ability to reflect sunlight helps it remain cooler than asphalt, which absorbs and retains heat. With its higher albedo, concrete reflects more sunlight than asphalt, which absorbs heat. This property helps to keep urban areas cooler, combating the urban heat island effect.

•From an environmental perspective, concrete production emits fewer greenhouse gases compared to asphalt. Moreover, concrete can be recycled and reused in new construction projects, minimizing environmental impact and promoting sustainability.

•Concrete is less prone to rutting and deformation under heavy loads and high temperatures with a superior load-bearing capacity. This resistance ensures a more consistent and safer driving surface, reducing the risk of vehicle damage and accidents.

•Concrete streets boast a significantly longer lifespan than their asphalt counterparts. Typically, concrete roads can last between 20 to 40 years with minimal maintenance, whereas asphalt streets often require resurfacing and repairs every 10 to 15 years. This longevity makes concrete a cost-effective option in the long run.

Provide information about how the proposed mitigation efforts integrate into the community's emergency and resiliency plans: The proposed mitigation effort, modification to the identified roadway segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: “Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards “ (p.270)

The proposed mitigation activity is also in concert with the goals of the Texas Water Development Board’s 2024 Texas Flood Plan which includes roadway safety and early warning system goals. The plan notes “This includes goals to improve safety at low water crossings, improve the level of service for exposed roadway segments, and increase the implementation of flood early warning systems for roadways and flood prone areas” (p.183). In addition, significant damage to the roadway segments would impede residents from being able to access

the nearest hurricane evacuation route per Galveston County's Hurricane Evacuation Mapping (Houston-Galveston Area Council-Hurricane Evacuation | Galveston, TX - Official Website).

See the 2022 Galveston County Hazard Mitigation Plan reference document, Texas Flood Plan reference document, and the Houston-Galveston Area Council's Evacuation Route documentation.

In the space provided, list documentation provided to support the identification of the threat or hazard and how it relates to potential impact: The hazard was identified through consultation with the national weather service, a review of the NOAA storm events database, and review of the risk assessment within the hazard mitigation plan.

Provide a brief description of how the proposed project addresses an integrated approach to mitigation: This project demonstrates an integrated approach towards mitigation as the county takes part in local and regional planning efforts and considered this project within the context of those planning efforts to determine if the project was in concert with both local and mitigation goals, objectives and strategies. This was accomplished by considering a number of factors/indicators as the project was developed including local and regional community acceptance of the project; effects on local and regional populations; technical feasibility and secondary local and regional impacts; the degree of local and regional public and political support for the project; existing local and regional legal authorities; costs, benefits, and the project's contribution to the local and regional economy; and existing local and regional environmental laws, regulations and ordinances.

Considering the local evaluation of hazard risks, responsible floodplain management, future extreme weather/natural disaster events, and long-term risks, describe how the proposed project promotes sustainable community resilience: The project promotes sustainable community resilience as it affords unimpeded access to a critical community lifeline, transportation. This segment of roadway is a part of the overarching county and regional transportation infrastructure. Transportation, as with other community lifelines, enables the continuous operation of critical government and business functions and is essential to human health and safety or economic security. Unimpeded access to this community lifeline has the potential to save lives by facilitating first responder's egress and ingress to homes within the community and community members' access to emergency evacuation routes should hurricane force winds and rains be forecasted. The project promotes economic security as unimpeded access to transportation routes allows community members to maintain or seek employment and patronize local businesses.

Describe how the proposed project is consistent with local and regional planning efforts to effect disaster mitigation: The proposed mitigation effort, modification to the identified roadway segments to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: "Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards " (p.270)

The proposed mitigation activity is also in concert with the goals of the Texas Water Development Board's 2024 Texas Flood Plan which includes roadway safety and early warning system goals. The plan notes "This includes goals to improve safety at low water crossings,

improve the level of service for exposed roadway segments, and increase the implementation of flood early warning systems for roadways and flood prone areas" (p.183).

Was a cost-benefit analysis used in the selection of the proposed project? Yes

Describe how the proposed project impacts vulnerable populations in the local community.: Either the entire census block or a substantial portion of the census block consists of low to moderate income persons, which are vulnerable solely based on their socio-economic status. Replacing the roadway segments with a more durable flood-resistant material will enable residents to more readily access evacuation routes during inclement weather events and places of employment and community service providers on a daily basis.

Describe how the proposed project creates economic opportunities for the local community: The project in and of itself does not create economic opportunities, but it does facilitate access to economic opportunities by enabling residents to be able to travel to their places of employment (employed residents) or potential places of employment (jobseekers). Further, residents will be able to continue to frequent local businesses including gas stations, grocery stores, restaurants, and other small locally owned businesses which rely on their customer bases to remain solvent and drive the local economy.

Does this project disproportionately impact vulnerable populations in the local community? No

Does the proposed project align with investments from other state or local capital improvements and infrastructure development efforts? Yes

Does the proposed project employ adaptable and reliable technology to guard against premature obsolescence? Yes

Describe the applicant's overall mitigation plan and how the project addressed in this application furthers that plan: The proposed mitigation effort, modification to the identified roadway segment to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: "Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards " (p.270)

Describe how the proposed project will contribute to the community's resiliency against future disasters as a result of these projects: Replacing the asphalt roadway segment with concrete will mitigate against future risk by minimizing the impacts of excessive coastal storm surge and runoff, negating the creation of urban heat islands, and ensuring residents are able to travel unimpeded to the nearest identified evacuation route should hurricane force winds and accompanying rain be forecasted.

Dickinson Senior Center Elevation Project

Project Info

Project Information

DRGR Activity: Public Facilities

Project Type: Community Centers ; Senior Center

Project Title: Dickinson Senior Center Elevation Project

Does this project include replacement or relocation of a facility (i.e., lift station, water treatment plant, etc.)? Yes

Provide a detailed description of the scope of work proposed. For proposed work involving a length of road, ditch, channel, etc., report the scope of the project in linear feet (lf): The Dickson Senior Center is a 3,920 SF one story facility located at 2714 Highway 3, Dickinson, TX (29.47111, -95.06142). The current facility is a municipal center having stucco covered CMU exterior walls with concrete slab on grade construction with standing seam metal hip roof. The building has overall dimensions of approximately 80 FT by 49 FT and consists of a large main room and kitchen as well as restrooms, an office and several activity and storage rooms. The existing building is located at the corner of 28th and HWY 3 and the new building will be constructed directly adjacent to the current building at 28th and Avenue F. The current building is located in the 100-year floodplain (see FEMA map panel #48167C0235G effective 8/15/19). As the current building has experienced flooding in the past (see documentation of damage after Hurricane Harvey) and primarily serves a vulnerable population, a more resilient structure elevated 2 feet above the current base flood elevation will be constructed at 29.470769, -95.061882 in compliance with FFRMS. The facility will be the same size and approximate dimensions.

Site: Project Site Title	Site: Street Address
Dickinson Senior Center	2714 Highway 3, Dickinson, TX

Describe a plan for the long-term funding and management of the operations and maintenance of the project: Maintenance will be performed by current building staff and paid for through the existing operating budget.

Mitigation

Identify the specific risk the proposed project will mitigate against: Severe Coastal Flooding

Describe as to how the proposed project addresses/mitigates against the current and future risks identified: The proposed mitigation efforts, modification to the identified roadway segments to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: “Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards “ (p.270)

Provide information about how the proposed mitigation efforts integrate into the community's emergency and resiliency plans: The proposed mitigation efforts, modification to the identified roadway segments to minimize the impacts of excessive coastal storm surge and runoff while negating the creation of urban heat islands is in concert with the Goal 1 and Objectives 1.2 and 1.5 of the current 2022 Galveston County Hazard Mitigation Plan: “Goal 1: Minimize loss of life, injury, damage to property, the economy, and natural systems from natural and human-caused hazard events; Objective 1.2: Protect existing/new critical facilities and community lifelines; Objective 1.5: 1.5: Minimize impacts from all hazards “ (p.270)

In the space provided, list documentation provided to support the identification of the threat or hazard and how it relates to potential impact: Hazard Mitigation Plan

Provide a brief description of how the proposed project addresses an integrated approach to mitigation: The project is aligned with local and regional planning efforts.

Considering the local evaluation of hazard risks, responsible floodplain management, future extreme weather/natural disaster events, and long-term risks, describe how the proposed project promotes sustainable community resilience: The project will protect people and property.

Describe how the proposed project is consistent with local and regional planning efforts to effect disaster mitigation: Local and regional plans speak to a considerable flood risk in the area and the project will protect people and property from flooding.

Was a cost-benefit analysis used in the selection of the proposed project? No

Describe how the proposed project impacts vulnerable populations in the local community.: The proposed project will protect the elderly community.

Describe how the proposed project creates economic opportunities for the local community: No economic opportunities will be created.

Does this project disproportionately impact vulnerable populations in the local community? No

Does the proposed project align with investments from other state or local capital improvements and infrastructure development efforts? No

Does the proposed project employ adaptable and reliable technology to guard against premature obsolescence? No

Describe the applicant's overall mitigation plan and how the project addressed in this application furthers that plan: The mitigation plan includes a substantive section about flood risk and vulnerability and this project addresses that risk.

Describe how the proposed project will contribute to the community's resiliency against future disasters as a result of these projects: This project will make the senior center's occupants better able to withstand flood impacts.

Galveston Drainage District #1-Site 1

Project Info

Project Information

DRGR Activity: Flood and Drainage Facilities

Project Type: Flood and Drainage

Project Title: Galveston Drainage District #1-Site 1

Does this project include replacement or relocation of a facility (i.e., lift station, water treatment plant, etc.)? No

Provide a detailed description of the scope of work proposed. For proposed work involving a length of road, ditch, channel, etc., report the scope of the project in linear feet (lf): Improvements will be made at the intersection of the drainage canal and water supply canal to increase water flow and prevent flooding. The siphon diameter will be increased and lengthened, and the drainage ditch will be widened and improved. The top bank width will also be increased. All proposed improvements will effectively separate the drainage and water supply canals. Construction work will include site preparation, site improvements and final grading.

Site: Project Site Title	Site: Street Address
Galveston Drainage District Site 1 Improvements	Willow Bayou

Describe a plan for the long-term funding and management of the operations and maintenance of the project: The county will be responsible for maintenance and include the project in its O&M Budget.

Which HUD national objective does the project meet? LMI

Describe activities that benefit low- and moderate-income people: The project will reduce flood risk to people and property.

Method(s) used to determine the beneficiaries: LMI Area Benefit

What method was used for Beneficiary Identification? Census (HUD LMISD)

Provide a brief description of the beneficiary identification method used to determine this national objective and upload supporting beneficiary maps, census data, and/or survey documents: GIS and census dat.

U.S. Congressional District #: 14

Texas Representative District #: 23

Texas Senate District #: 11

Environmental

What is the current status of the project? Not yet begun

Will the assistance requested have any negative impact(s) or effect(s) on the environment? No

Is the proposed project likely to require an archaeological assessment? No

Is the proposed site(s) listed on the National Register of Historic Places? No

Is the project in a designated floodway or coastal high hazard area? No

Is the project in a designated special flood hazard area or a designated wetland? No

For projects in the 500 or 100-year floodplain: Does your project involve a critical action as defined in 24CFR55.2(b)(3)?

Is any project site located in a known critical habitat for endangered species? No

Is any project site a known hazardous site? No

Is any project site located on federal lands or at a federal installation? No

Is any project site subject to or participating in Fixing America's Surface Transportation Act (FAST-41) (P.L. 114-94)? No

What level of environmental review is likely needed for this project? Environmental Assessment

Provide any additional detail or information relevant to Environmental Review: NA

Provide a brief narrative regarding how CDBG-MIT funding is to be used. Demonstrate that HUD CDBG environmental requirements have been met to date:

Permits

Does the project require any federal, state, or other permits, approvals, or waivers to complete the proposed work? No

If yes, describe the type and purpose of each permit and its association with the proposed project. Provide a copy of each permit already executed:

Does the project require any type of ratified, legally binding agreement between the applicant and any other entity to provide continual operation upon completion? No

If yes, describe the type and purpose of each agreement and its association with the proposed project. Provide a copy of each agreement already executed or drafted:

For sewer and/or water facilities projects, does the applicant currently hold the Certificate of Convenience and Necessity (CCN) for the target area proposed in the application? (If not a sewer and/or water facilities project, please choose N/A): N/A

Budget Activity Lines

Program Budget Code	Planned/Requested Amount	Planned Other Funds Amount	Total	Percent of Total

Grant Administration	$76,852.79	$0.00	$76,852.79	4.8%
Engineering	$300,000.00	$0.00	$300,000.00	18.6%
Construction	$1,237,055.85	$0.00	$1,237,055.85	76.6%

Mitigation

Identify the specific risk the proposed project will mitigate against: Severe Coastal Flooding;Storms

Describe as to how the proposed project addresses/mitigates against the current and future risks identified: The project will reduce risk to people and property

Provide information about how the proposed mitigation efforts integrate into the community's emergency and resiliency plans: The project will reduce risk to people and property

In the space provided, list documentation provided to support the identification of the threat or hazard and how it relates to potential impact: The project will reduce risk to people and property

Provide a brief description of how the proposed project addresses an integrated approach to mitigation: The project will reduce risk to people and property

Considering the local evaluation of hazard risks, responsible floodplain management, future extreme weather/natural disaster events, and long-term risks, describe how the proposed project promotes sustainable community resilience: The project will reduce risk to people and property

Describe how the proposed project is consistent with local and regional planning efforts to effect disaster mitigation: The project will reduce risk to people and property

Was a cost-benefit analysis used in the selection of the proposed project? No

Describe how the proposed project impacts vulnerable populations in the local community.: The project will reduce risk to people and property

Describe how the proposed project creates economic opportunities for the local community: The project does not

Does this project disproportionately impact vulnerable populations in the local community? No

Does the proposed project align with investments from other state or local capital improvements and infrastructure development efforts? No

Does the proposed project employ adaptable and reliable technology to guard against premature obsolescence? No

Describe the applicant's overall mitigation plan and how the project addressed in this application furthers that plan: The project will reduce risk to people and property

Describe how the proposed project will contribute to the community's resiliency against future disasters as a result of these projects: The project will reduce risk to people and property

Galveston Drainage District #1-Site 5

Project Info

Project Information

DRGR Activity: Flood and Drainage Facilities

Project Type: Flood and Drainage

Project Title: Galveston Drainage District #1-Site 5

Does this project include replacement or relocation of a facility (i.e., lift station, water treatment plant, etc.)? No

Provide a detailed description of the scope of work proposed. For proposed work involving a length of road, ditch, channel, etc., report the scope of the project in linear feet (lf): Drainage improvements north tower road. Improvements will be made at the intersection of the drainage canal and water supply canal to increase water flow and prevent flooding. The siphon diameter will be increased and lengthened, and the drainage ditch will be widened and improved. The top bank width will also be increased. All proposed improvements will effectively separate the drainage and water supply canals. Construction work will include site preparation, site improvements and final grading.

Site: Project Site Title	Site: Street Address
Galveston Drainage District Site 5 Improvements	North Tower Road

Describe a plan for the long-term funding and management of the operations and maintenance of the project: The drainage district will assume responsiblity and include in its O and M plan.

Total proposed number of linear feet: 500

Total number of proposed public facilities:

Rollover Pass Waterline Improvements

Project Info

Project Information

DRGR Activity: Flood and Drainage Facilities

Project Type: Flood and Drainage

Project Title: Rollover Pass Waterline Improvements

Does this project include replacement or relocation of a facility (i.e., lift station, water treatment plant, etc.)? No

Provide a detailed description of the scope of work proposed. For proposed work involving a length of road, ditch, channel, etc., report the scope of the project in linear feet (lf): The Gilchrist community is situated on the Eastern end of Bolivar Peninsula on the Gulf Coast. This area is prone to extreme weather events such as hurricanes, tropical storms, flooding, tidal surges and wind damage. Gilchrist has been impacted by many natural disasters over the years. These massive storm events often result in the loss of power and disruption of services. During these events, it is imperative to maintain the ability to transmit water to residents and emergency services without the threat of waterline failures and breaks during these periods when the districts resources are focused on storm management. The existing 20” waterline that serves the Crystal Beach and Port Bolivar Communities crosses over Rollover Bridge in a semi-temporary manner. This has been the case since Hurricane Ike. The bridge has not been completely repaired since Hurricane Ike in 2008. If the remainder of the bridge is damaged, by a future storm event, the 20” water line will likely be damaged also, leaving these communities with only the water in the elevated storage tanks at that time.

The purpose of the project is to mitigate the potential damages and impacts of hurricanes, tropical storms, flooding, tidal surges, and wind damage. The project will replace the exposed line that crosses Rollover with new materials and the waterline will be buried at grade to protect it from the harsh environment and extreme weather that is common in this coastal area. Rollover Pass was recently filled in by the GLO. This project will construct a new 20” waterline inside a 30” steel casing under/through the newly filled Rollover Pass. This line will be constructed through the open cut method of construction and will provide a safe secure source of water to the Crystal Beach and Port Bolivar Communities that will not be damaged by a future storm event damaging the US Hwy 87 bridge.

Site: Project Site Title	Site: Street Address
Rollover Pass Waterline Improvements	Highway 87, Bolivar, TX 77650

Describe a plan for the long-term funding and management of the operations and maintenance of the project: Long term maintenance and operations will be managed by the Bolivar Peninsula Special Utility District (BPSUD). As the line has a conservative useful life of 50 years and will be buried to protect it from the elements, O&M expenditures are not anticipated. With that said, should any atypical maintenance or operations issues arise, BPSUD

will assume all fiscal and administrative responsibility for ensuring O&M issues are promptly addressed.

Total proposed number of linear feet: 600

Total number of proposed public facilities:

Which HUD national objective does the project meet? LMI

Describe activities that benefit low- and moderate-income people: The project will harden a waterline pipe which serves approximately 17,000 people including the LMI population. This project will mitigate hurricanes, tropical storms, flooding, tidal surge and wind damage. The Gilchrist community is situated on the Eastern end of Bolivar Peninsula on the Gulf Coast. This area is prone to extreme weather events such as hurricanes, tropical storms, flooding, tidal surges and wind damage. Gilchrist has been impacted by many natural disasters over the years. These massive storm events often result in the loss of power and disruption of services. During these events, it is imperative to maintain the ability to transmit water to residents and emergency services without the threat of waterline failures and breaks during these periods when the districts resources are focused on storm management. The existing 20” waterline that serves the Crystal Beach and Port Bolivar Communities crosses over Rollover Bridge in a semi-temporary manner. This has been the case since Hurricane Ike. The bridge has not been completely repaired since Hurricane Ike in 2008. If the remainder of the bridge is damaged, by a future storm event, the 20” water line will likely be damaged also, leaving these communities with only the water in the elevated storage tanks at that time.

Texas Senate District #: 11

Environmental

What is the current status of the project? Not yet begun

Will the assistance requested have any negative impact(s) or effect(s) on the environment? No

Is the proposed project likely to require an archaeological assessment? Yes

Is the proposed site(s) listed on the National Register of Historic Places? No

Is the project in a designated floodway or coastal high hazard area? Yes

Is the project in a designated special flood hazard area or a designated wetland? Yes

For projects in the 500 or 100-year floodplain: Does your project involve a critical action as defined in 24CFR55.2(b)(3)? No

Is any project site located in a known critical habitat for endangered species? Yes

Is any project site a known hazardous site? No

Is any project site located on federal lands or at a federal installation? No

Is any project site subject to or participating in Fixing America's Surface Transportation Act (FAST-41) (P.L. 114-94)? No

What level of environmental review is likely needed for this project? Environmental Assessment

Provide any additional detail or information relevant to Environmental Review: The first phase of the project includes development of a comprehensive environmental assessment/review given the location and permitting/consultation with USACE, TxDOT, and Galveston County.

Provide a brief narrative regarding how CDBG-MIT funding is to be used. Demonstrate that HUD CDBG environmental requirements have been met to date:

Permits

Does the project require any federal, state, or other permits, approvals, or waivers to complete the proposed work? Yes

If yes, describe the type and purpose of each permit and its association with the proposed project. Provide a copy of each permit already executed: 404 Pemiting from USACE will be required.

Does the project require any type of ratified, legally binding agreement between the applicant and any other entity to provide continual operation upon completion? Yes

If yes, describe the type and purpose of each agreement and its association with the proposed project. Provide a copy of each agreement already executed or drafted: An MOU has been drafted between the county and the district.

For sewer and/or water facilities projects, does the applicant currently hold the Certificate of Convenience and Necessity (CCN) for the target area proposed in the application? (If not a sewer and/or water facilities project, please choose N/A): N/A

Budget Activity Lines

Program Budget Code	Planned/Requested Amount	Planned Other Funds Amount	Total	Percent of Total
Construction	$1,964,160.00	$0.00	$1,964,160.00	67.8%
Acquisition	$0.00	$0.00	$0.00	0%

Mitigation

Identify the specific risk the proposed project will mitigate against: Severe Coastal Flooding

Describe as to how the proposed project addresses/mitigates against the current and future risks identified: The project will prevent loss of critical utilities to customers.

Provide information about how the proposed mitigation efforts integrate into the community's emergency and resiliency plans: The project aligns with the county's mitigation plan as a primary goal is to prevent loss of life.

In the space provided, list documentation provided to support the identification of the threat or hazard and how it relates to potential impact: The project was identified through discussions with local community stakeholders.

Provide a brief description of how the proposed project addresses an integrated approach to mitigation: The project is aligned with the county mitigation plan.

Considering the local evaluation of hazard risks, responsible floodplain management, future extreme weather/natural disaster events, and long-term risks, describe how the proposed project promotes sustainable community resilience: The project will ensure the community has a ready source of water.

Describe how the proposed project is consistent with local and regional planning efforts to effect disaster mitigation: The project will reduce the need for potable water supply

Was a cost-benefit analysis used in the selection of the proposed project? No

Describe how the proposed project impacts vulnerable populations in the local community.: A portion of the service area includes LMI communities.

Describe how the proposed project creates economic opportunities for the local community: No economic opportunities will be created.

Does this project disproportionately impact vulnerable populations in the local community? No

Does the proposed project align with investments from other state or local capital improvements and infrastructure development efforts? No

Does the proposed project employ adaptable and reliable technology to guard against premature obsolescence? No

Describe the applicant's overall mitigation plan and how the project addressed in this application furthers that plan: The mitigation plan is aimed at reducing loss of life.

Describe how the proposed project will contribute to the community's resiliency against future disasters as a result of these projects: The project will ensure a consistent water supply is available.

Pearson Culverts

Project Info

Project Information

DRGR Activity: Flood and Drainage Facilities

Project Type: Flood and Drainage

Project Title: Pearson Culverts

Does this project include replacement or relocation of a facility (i.e., lift station, water treatment plant, etc.)? No

Provide a detailed description of the scope of work proposed. For proposed work involving a length of road, ditch, channel, etc., report the scope of the project in linear feet (lf): Pearson Road is located in the southwestern part of Galveston County in Santa Fe, Texas. The homes that line Pearson Road are susceptible to flooding due to excess stormwater collecting on and along the roadway during both routine and heavy rain events. The current drainage system is undersized and unable to adequately convey flow away from the 19 properties that line the road for approximately 1.2 miles. The nineteen culverts range in size from 30' to 40' in length; 34"-86" in diameter; and are constructed primarily of reinforced concrete pipe. The scope of work includes replacement of these culverts with larger culverts with the capacity to adequately convey both routine and excess flow. The intent is to place fifteen 4' x 6'reinforced box culverts, two 84"corrugated metal pipe culverts and as the drainage canal tapers down towards a natural outfall the flow will pass through an additional two 72" corrugated metal pipe culverts. The culverts would be placed in the ditch underneath the homeowners' driveways, which will offer an additional level of protection and act as an additional layer of reinforcement. In essence, the project would create a roadside ditch/collector system providing lateral drainage from properties with a top bank width of 25'-30'; 4'-8' deep.

Once all design and engineering activities are complete and construction permits received, the box culvert sections will be delivered and unloaded with a crane and stabilizers. A 20’ x 20’ staging area, would be sited alongside the road and construction materials would be shipped there to allow the work to be undertaken in segments. The existing culverts along with sufficient earthen material to house the new culverts will be excavated on site. Once complete, bedding will be placed. In general, the bedding material will be at least 6” thick and comprised of medium granular materials to provide uniform support the full length and width of each section. The final grade for the bedding will be established by using a laser (or level) and grade stakes placed at intervals in accordance with the design. Final grading will be accomplished by screeding the granular material. The screed board will be as long as the width of the outside span of the box (span + 2 x the wall thickness). The first section will then be placed, and remaining sections joined and sealed. A butyl blend material packaged in 1 to 2-square inches x 10-ft paper wrapped rolls is anticipated to be used as a joint sealant. The joint material will be placed on the bottom half of the groove of the box last placed with the balance of the sealant placed on the top half of the tongue of the box to be set. The material will be placed about 1-inch from the leading edge of the groove and tongue. The granular material 6-inches in front of the groove of the previously set box will then be removed to a depth of about 3-inches to prevent the material

from moving into the joint as the boxes are pulled together. The box sections will then be joined using chains and winches with the crane operator bringing the tongue end of the box to a position in front of the receiving groove. Lift inserts will then be filled with grout and made to be flush with the top of the box culvert section. Backfill will be placed uniformly on each side of the precast box sections as installation progresses, taking care not to disturb the alignment of the boxes. The corrugated metal pipes will be installed utilizing a trenching process.

Site: Project Site Title	Site: Street Address
Pearson Road Culverts	Pearson Road

Describe a plan for the long-term funding and management of the operations and maintenance of the project: Galveston County will be responsible for maintaining the culverts and costs will be included in the annual roads and bridges operations and maintenance budget. The culverts will be inspected quarterly and after major storm events for signs of erosion, obstructed flow, or damage. Visual checks or mandrel and/camera (if needed) inspections will occur during the quarterly inspections and after major flow events. Inspections will be documented with photos and written observations to detail distresses or changes to the culvert over time. Sediment and debris build-up will be monitored; debris will be cleared, vegetation and roots will be trimmed, as needed, and additional jetting/cleaning of internal siltation will be undertaken, if necessary.

Total proposed number of linear feet: 3,800

Total number of proposed public facilities:

National Objective

National Objective

Provide Total Number of Beneficiaries: 7,225

Provide number of LMI Beneficiaries 2,370

Percentage of LMI Beneficiaries: 32.8%

Is that applicant a HUD Exception Grantee? No

Census Tract	Block Group List (Text)
7,235	Group 1 ; Group 2 ; Group 4 ; Group 10

Male: 3,800

Female: 3,425

Total: 7,225

Race	Hispanic Population	Non-Hispanic Population	Total Population
Some Other Race	1,150	1,130	2,280
Other Multi-Racial	145	243	388
Native Hawaiian / Other Pacific Islander	44	62	106
Black African American/White	154	185	339
White	1,534	830	2,364
Black African American	67	896	963
Asian/White	87	42	129
Asian	87	65	152
American Indian/Alaskan Native/White	98	75	173
American Indian/Alaskan Native/Black African American	234	72	306

Race	Hispanic Population	Non-Hispanic Population	Total Population
American Indian/Alaskan Native	0	25	25

Which HUD national objective does the project meet? LMI

Describe activities that benefit low- and moderate-income people: Installing the culverts will solve a repetitive flood risk and minimize property damage to homes owned/rented by the LMI income populace.

Method(s) used to determine the beneficiaries: LMI Area Benefit

What method was used for Beneficiary Identification? Census (HUD LMISD)

Provide a brief description of the beneficiary identification method used to determine this national objective and upload supporting beneficiary maps, census data, and/or survey documents: The beneficiary population was determined through a geospatial analysis of the most recent census block data using the American Community Survey Summary File Retrieval Tool and ArcGIS.

U.S. Congressional District #: 14

Texas Representative District #: 23

Texas Senate District #: 11

Environmental

What is the current status of the project? Not yet begun

Will the assistance requested have any negative impact(s) or effect(s) on the environment? No

Is the proposed project likely to require an archaeological assessment? Yes

Is the proposed site(s) listed on the National Register of Historic Places? No

Is the project in a designated floodway or coastal high hazard area? No

Is the project in a designated special flood hazard area or a designated wetland? Yes

For projects in the 500 or 100-year floodplain: Does your project involve a critical action as defined in 24CFR55.2(b)(3)? Yes

Is any project site located in a known critical habitat for endangered species? No

Is any project site a known hazardous site? No

Is any project site located on federal lands or at a federal installation? No

Is any project site subject to or participating in Fixing America's Surface Transportation Act (FAST-41) (P.L. 114-94)? No

What level of environmental review is likely needed for this project? Environmental Assessment

Provide any additional detail or information relevant to Environmental Review: N/A

Provide a brief narrative regarding how CDBG-MIT funding is to be used. Demonstrate that HUD CDBG environmental requirements have been met to date:

Permits

Does the project require any federal, state, or other permits, approvals, or waivers to complete the proposed work? Yes

If yes, describe the type and purpose of each permit and its association with the proposed project. Provide a copy of each permit already executed: A USACE Nationwide Permit may be required, but this will be assessed once an environmental assessment is undertaken.

Does the project require any type of ratified, legally binding agreement between the applicant and any other entity to provide continual operation upon completion? No

If yes, describe the type and purpose of each agreement and its association with the proposed project. Provide a copy of each agreement already executed or drafted:

For sewer and/or water facilities projects, does the applicant currently hold the Certificate of Convenience and Necessity (CCN) for the target area proposed in the application? (If not a sewer and/or water facilities project, please choose N/A): N/A

Budget Activity Lines

Program Budget Code	Planned/Requested Amount	Planned Other Funds Amount	Total	Percent of Total
Construction	$1,149,509.30	$0.00	$1,149,509.30	67.6%
Engineering	$469,240.00	$0.00	$469,240.00	27.6%
Grant Administration	$81,250.70	$0.00	$81,250.70	4.8%
Special Environmental	$0.00	$0.00	$0.00	0%
Environmental	$0.00	$0.00	$0.00	0%
Acquisition	$0.00	$0.00	$0.00	0%
Planning	$0.00	$0.00	$0.00	0%

Mitigation

Identify the specific risk the proposed project will mitigate against: Storms

Describe as to how the proposed project addresses/mitigates against the current and future risks identified: The project will protect against flood risk by increasing conveyance.

Provide information about how the proposed mitigation efforts integrate into the community's emergency and resiliency plans: Local planning efforts are aimed at reducing flood risk.

In the space provided, list documentation provided to support the identification of the threat or hazard and how it relates to potential impact: Hazard Mitigation Plan.

Provide a brief description of how the proposed project addresses an integrated approach to mitigation: The project is aligned with local and regional planning efforts.

Considering the local evaluation of hazard risks, responsible floodplain management, future extreme weather/natural disaster events, and long-term risks, describe how the proposed project promotes sustainable community resilience: The project will protect people and property.

Describe how the proposed project is consistent with local and regional planning efforts to effect disaster mitigation: Local and regional plans speak to a considerable flood risk in the area and the project will protect people and property from flooding.

Was a cost-benefit analysis used in the selection of the proposed project? No

Describe how the proposed project impacts vulnerable populations in the local community.: The proposed project will protect the elderly community.

Describe how the proposed project creates economic opportunities for the local community: No economic opportunities will be created.

Does this project disproportionately impact vulnerable populations in the local community? No

Does the proposed project align with investments from other state or local capital improvements and infrastructure development efforts? No

Does the proposed project employ adaptable and reliable technology to guard against premature obsolescence? No

Describe the applicant's overall mitigation plan and how the project addressed in this application furthers that plan: The mitigation plan includes a substantive section about flood risk and vulnerability and this project addresses that risk.

Describe how the proposed project will contribute to the community's resiliency against future disasters as a result of these projects: This project will the homeowners less susceptible to flooding.

33rd and Avenue L Extension

Project Info

Project Information

DRGR Activity: Flood and Drainage Facilities

Project Type: Flood and Drainage

Project Title: 33rd and Avenue L Extension

Does this project include replacement or relocation of a facility (i.e., lift station, water treatment plant, etc.)? No

Provide a detailed description of the scope of work proposed. For proposed work involving a length of road, ditch, channel, etc., report the scope of the project in linear feet (lf): The project is to extend a culvert 1,250 LF.

Site: Project Site Title	Site: Street Address
33 and Avenue L Extension	Intersection of Avenue L & 33rd Street to 7720 Avenue L, Santa Fe, TX, 77510

Describe a plan for the long-term funding and management of the operations and maintenance of the project: Long term maintenance will be provided by the county and included in its O&M plan and annual budget.

Total proposed number of linear feet: 1,250

Total number of proposed public facilities:

Project Phase	Start Date	End Date	Length (in months)

Second Amendment to Financial Assistance Program Contract RFP #24-009 for St. Vincent's House

1. This Amendment is entered between Galveston County and St. Vincent's House.

2. The parties entered into a Contract for the Financial Assistance Program effective beginning October 1, 2024. A copy of this agreement may be found in the Commissioners' Court Agenda of October 28, 2024, Item No. 52.

3. This amendment reflects an additional $30,000.00 to be added to the amount of $30,000.00 specified in the original contract, $50,000.00 for the 1st Amendment for a total of $110,000.00. If the entire amount is properly disbursed, St. Vincent's House will receive an additional $2,727.27, as an administrative fee, in addition to the $2,727.27 in the original contract, $4,545.50 for the 1st Amendment, for a total of $10,000.04 in administrative fees.

	Contract Amount	Services	Administration Fee
Original Contract 10/2024 to 9/30/2025	**$30,000.00**	**$27,272.73**	**$2,727.27**
1st Amendment – March 31, 2025	**$50,000.00**	**$45,454.50**	**$4,545.50**
2nd Amendment – November 10, 2025	**$30,000.00**	**$27,272.73**	**$2,727.27**
	$110,000.00	**$99,999.96**	**$10,000.04**

4. All other conditions of the original contract are to remain the same.

Dear Tashonda Edwards
Indigent Coordinator/Social Worker, Community Services
County of Galveston
2516 Texas Ave Ste, 167
Texas City, TX 77590

Re: Galveston County Financial Assistance – Emergency Funds

Dear Tashonda,

We respectfully request $30,000 in funding from the County of Galveston to assist the residents of Galveston County that are greatly affected by the economic pandemic. Attached is the detailed invoice.

Many of the clients that use St. Vincent's House (SVH) services suffer from relatively common ailments in advanced stages due to a lack of access to basic needs. Mental health issues, food insecurity, a lack of secure lodging, and a variety of social determinants compound health issues. Most of our clients have a higher probability of falling through the cracks in the current social, health, and community infrastructure deficiencies in the SVH area of Galveston.

We know the need is great here in Galveston County as our families continue to struggle and St. Vincent's House stands prepared to help.

We would appreciate any additional financial support you could give the residents of Galveston County.

Faithfully,

Thank you!

Paula C. Tobon

Second Amendment to Financial Assistance Program Contract RFP #24-009 for M.I. Lewis

1. This Amendment is entered between Galveston County and M.I. Lewis.

2. The parties entered into a Contract for the Financial Assistance Program effective beginning October 1, 2024. A copy of this agreement may be found in the Commissioners' Court Agenda of November 25, 2024, Item No. 43.

3. This amendment reflects an additional $40,000.00 to be added to the amount of $30,000.00 specified in the original contract, and $40,000.00 for the 1st Amendment for a total of $110,000.00. If the entire amount is properly disbursed, M.I. Lewis will receive an additional $3,636.36, as an administrative fee, in addition to the $2,727.27 in the original contract and $3,636.36 for the 1st Amendment, for a total of $9,999.99 in administrative fees.

	Contract Amount	Services	Administration Fee
Original Contract 10/2024 to 9/30/2025	**$30,000.00**	**$27,272.73**	**$2,727.27**
1st Amendment – June 9, 2025	**$40,000.00**	**$36,363.64**	**$3,636.36**
2nd Amendment – November 10, 2025	**$40,000.00**	**$36,363.64**	**$3,636.36**
	$110,000.00	**$100,000.01**	**$9,999.99**

4. All other conditions of the original contract are to remain the same.

M.I. Lewis

Texas City, TX 77590

Dear Ms. Edwards,

I hope this message finds you well. On behalf of the M.I. Lewis Social Service Center, I am writing to formally request a second round of funding for the FY26 Emergency Financial Assistance contract period.

We are seeking $40,000 to continue providing urgent support to Galveston County residents in crisis. Of this amount, $36,363.64 will be used directly for client assistance, with 10% ($3,636.36) allocated toward administrative costs associated with delivering services.

We are grateful for the initial $30,000 allocation, which has already been fully expended in assisting dozens of households with emergency rent and utility payments. The impact of that funding has been tremendous, but the need continues to grow. M.I. Lewis is experiencing a record number of requests for assistance, many from families who have never needed help before. Rising costs of living, gaps in other support systems have left many on the brink.

This additional funding will allow us to maintain continuity of services and respond quickly to those in urgent need. We remain deeply committed to ensuring that vulnerable individuals and families in our community do not fall through the cracks.

Thank you for your continued support and consideration of this important request.
We are proud to partner with you in serving our neighbors with compassion and dignity.

Warm regards,

Angelica Hanley

Re: RESTORE Grant Contact No. 582-20-11883

Dear Ms. Keel,

Galveston County Commissioners Court met on March 9, 2020, to review and execute the above-referenced RESTORE grant award contract regarding the Teas City Hurricane Protection Levee Repairs Project.

The initial 2020 grant award of $6,528,960 to assess and make repairs to the Texas City Levee was based on estimates from 2012, and those funds have resulted in successful completion of important work at the levee. However, current estimates for the final phase of the project to repair the Moses Lake Tide Gate exceed the original grant amount resulting in a $2.9 million deficient to complete the project.

Recent communications with TCEQ Grant Coordinators resulted in the commitment of $2,872,480 in additional grant funds with a mandatory match amount of $1,396,979 from the Galveston County General Fund, should other funding not be available from other grant sources. The match commitment will be reviewed and ratified by Commissioners Court at their November 10th regular meeting.

Please contact Michael Shannon, Galveston County Engineer, if you have any questions about this correspondence or the match commitment at 409-770-5354 or michael.shannon@galvestoncountytx.gov.

Sincerely,

Mark Henry

To reclassify budgets (ledger accounts and spend categories) for Fixed Asset Recon							
						$ 90,881.46	$ 90,881.46

Prepared/Posted by: Austin Schumann **Accounting Date:** 1/1/2025

Approved in Workday by: Kenna Pruitt

Explanation and recon

Line Entry 1: 1101-522020 items are for separate mounting/installation for cameras. Only $4,540 of the PO was completed; the rest was done in-house. There are no main fixed assets in this invoice/PO as this a separate mounting/installation (cameras were not purchased with it) Therefore, these need to be reclassified out of capital outlays to extraordinary supplies
Line Entry 1 support is pages 3-15

Line Entry 2: 3100-110000 Radios accessories do not relate to each individual radio, and therefore, should not be a capital asset (move from capital outlays to extraordinary supplies)
Only reclassifying Line 34 of the PO ($10,795.76).
Line Entry 2 support is pages 16-25

Line Entry 3: 2301-312110 Printer Warranty is invoiced separately from the printer and is a second-year warranty; therefore, it should not be capitalized and should be reclassified ($4,500).
Line Entry 3 support is pages 26-34

Line entry 4: 1101-159100 Technology Hardware, various technology hardware relates to the capital asset (already capitalized) lifesafety power system, in addition to installation fees and freight, which are usually included with capital assets. Thefore, these need to be reclassified to a capital outlay account
This relates to PO-0000299, SI-0012099. $71,045.70 of the $97,919.91 PO total amount.
Line Entry 4 support is pages 35-42

FAILURE TO DELIVER:
If the Vendor fails to deliver by the promised date, or reasonably thereafter, without giving acceptable reasons for delay, or if supplies are rejected for failure to meet specifications, the County reserves the right to purchase the specific item elsewhere and charge any increase in price and cost of handling to the Vendor. No substitutions or cancellations permitted without prior approval of the Purchasing Department of Galveston County.

SALES TAX EXEMPTION CERTIFICATE:
The undersigned claims an exemption from all sales taxes under Chapter 20, Title 122A, Revised Civil Statutes of Texas, for purchase of tangible personal property described in this numbered order, purchased from Vendor listed above.

By: _____

PURCHASING AGENT

THIS ORDER IS ISSUED SUBJECT TO GALVESTON COUNTY'S GENERAL TERMS AND CONDITIONS
ORIGINAL

TERMS AND CONDITIONS

I. COMPLETE AGREEMENT: This Purchase Order, which consists of these terms and conditions, the conditions contained within the referenced bid nunber, the contract entered into between Galveston County and Vendor (if any) and any other attached terms, conditions, and specifications of Galveston County, is the sole and exclusive agreement between the parties. It supersedes all other writings and is expressly conditioned upon Vendor's agreement to the conditions hereof. In addition, nothing herein shall be construed to be an acceptance of any terms of Vendor. In the event of any conflict between the terms and conditions of this Purchase Order and any Contract entered into between the County and the Vendor, the terms of the Contract shall prevail.

2. MODIFICATION: No modification of this Purchase Order shall be effective without Galveston County's prior written consent. No course of prior dealings, no usage of the trade and no course of performance shall be used to modify, supplement, or explain any terms used in this Purchase Order. Galveston County will not be bound by any oral statement, verbal agreement, or other representation contrary to the written specifications, terms, and conditions of this Purchase Order.

3. CANCELLATION: GALVESTON COUNTY shall have the right to cancel for default all or any part of this Purchase Order if Vendor breaches any of the terms, conditions, or requirements hereof, or if the Vendor becomes insolvent or commits acts of bankruptcy, or at any time for any reason or no reason prior to acceptance of delivery by GALVESTON COUNTY. Such right of cancellation is in addition to and not in lieu of any other remedies, which GALVESTON COUNTY may have in law or equity.

4. TERMINATION: The performance of work under this Purchase Order may be terminated in whole or in part by GALVESTON COUNIY in accordance with this provision. Termination of work hereunder shall be effected by the delivery to the Vendor of a "Notice of Termination" specifying the extent to which performance of work under the Purchase Order is terminated and the date upon which such termination becomes effective. Such right of termination is in addition to, and not in lieu of; rights of GALVESTON COUNTY set forth in Paragraph 3 above.

5. DELIVERY: Time is of the essence in this Purchase Order and if delivery of conforming goods or performance of services is not completed by the time(s) promised, GALVESTON COUNTY reserves the right, in addition lo its other rights and remedies, to cancel this Purchase Order, to reject nonconforming goods or services in whole or in part on reasonable notice to Vendor, and/or purchase substitute goods or services elsewhere and charge Vendor with any loss incurred. If delay in promised delivery is foreseen, Vendor shall give written notice to GALVESTON COUNTY, and the delivery date may be extended by GALVESTON COUNTY for valid reasons. Vendor must keep GALVESTON COUNTY advised at all times of status of Purchase Order. No substitutions or cancellations will be permitted without the prior written approval of GALVESTON COUNTY Purchasing Department. Delivery shall be made only on weekdays from 8:00a.m. to 5:00p.m., unless prior approval for other delivery times has been obtained Any provisions herein for delivery of goods or perfo1rnance of services by installments shall not be construed as making the obligation of Vendor severable. C.O.D. shipments will not be accepted.

6. ACCEPTANCE OF PRODUCTS AND SERVICES: All products furnished and all services perfo1rned under this Purchase Order shall be to the satisfaction of GALVESTON COUNTY and in accordance with the specifications, terms, and conditions of the Purchase Order and 3nY applicable contract. GALVESTON COUNTY reserves the right to inspect the products furnished or the services performed, and to determine the quality, acceptability, and fitness of such products or services.

7. INVOICING AND PAYMENT: Vendor shall submit an itemized invoice showing GALVESTON COUNTY Purchase Order number. Invoices must agree in all respects with this Purchase Order. Payment will normally be remitted within thirty (30) days after receipt of a properly submitted invoice. Failure to submit invoices in accordance with the requirements herein may delay payment. All cash discounts offered will be taken if earned. Cash discount will be calculated from date of receipt of properly submitted invoice at the Invoice Address specified on the face of this Purchase Order.

8. TITLE & RISK OF LOSS: The title and risk of loss of the goods shall not pass to GALVESTON COUNTY until GALVESTON COUNTY actually receives and takes possession of the goods at the point or points of delivery.

9. ASSIGNMENT/DELEGATION: No right or interest in this Purchase Order shall be assigned, and no obligation of Vendor shall be delegated, to any third party without the prior written consent of GALVESTON COUNTY. Any such assignment or delegation by Vendor shall be wholly void and totally ineffective for all purposes unless made in conformity wtth this paragraph.

10. INDEPENDENT CONTRACTOR: In performing any services hereunder Vendor is, and undertakes performance thereof as, an independent contractor, with sole responsibility for all per.ions employed in connection therewith, including without limitation, exclusive liability for the payment of all Federal, State, and local Unemployment and Disability Insurance and all Social Security and/or other taxes and contributions payable in respect of such persons, from and against which liability Vendor agrees to indemnify, exonerate and hold harmless GALVESTON COUNTY.

11. INSURANCE: If this Purchase Order requires the presence on GALVESTON COUNTY premises of Vendor's employees, subcontractors or others under Vendor's control, Vendor agrees, prior to commencement of any services hereunder, to transmit to GALVESTON COUNTY certificates of insurance as specified m the contract between parties.

12. INDEMNIFICATION: Vendor shall indemnify, exonerate, hold harmless and defend GALVESTON COUNTY and the COUNTY COMMISSIONER'S COURT from and against any actions or suits and any claims, liability, damage, loss, cost or expense as a result of bodily injury or death and/or property damage arising out of or in connection with this Purchase Order, unless caused by the sole negligence of GALVESTON COUNTY.

13. WARRANTIES: In addition to all warranties established by law, Vendor hereby warrants and agrees that:

(a) All goods and services covered by this Purchase Order shall conform to the specifications, drawings, samples, or other descriptions set forth herein or otherwise furnished or adopted by GALVESTON COUNTY, and shall be merchantable, fit for the purpose intended, of best quality and workmanship, and free from all defects. GALVESTON COUNTY shall have the right of inspection and approval, and may, at Vendor's expense, reject and return nonconforming goods or require re-petfo1rnance of services, which are not in compliance with the requirements of this Purchase Order. Defects shall not be deemed waived bv GALVESTON COUNTY'S failure to notify Vendor upon receipt of goods or completion of services, or by payment of invoice.

(b) All articles and/or services provided hereunder meet or exceed the Safety Standards established and promulgated under the Federal Occupational Safety and Health Administration (Public Law 91-596) and its regulations in effect or proposed as of the date of this Purchase Order.

(c) All goods delivered pursuant to this Purchase Order shall confo1rn to standards established for such goods in accordance with any applicable Federal, State, or local laws and regulations. unless otherwise indicated herein.

(d) The use or sale of any goods delivered hereunder, or any part thereof; does not infringe any adverse existing patent, trademark, copyright, or other intellectual property right. Vendor shall indemnify, exonerate, and save harmless GALVESTON COUNTY, its customers, users of its products and its and their successors and assigns, or any of them, from and against any and all liability, damage, loss cost or expense incurred in connection with any claim, suit or action for actual or alleged infringement of any such rights, and Vendor shall defend, at its expense, any such claim suit or action brought against GALVESTON COUNTY, its customers, users of its products and its and their successors and assigns, or any of them.

The foregoing warranties shall survive acceptance of goods and performance of services hereunder.

14. NON-DISCLOSURE: Unless required by law or consented to in writing by GALVESTON COUNTY, no disclosure, description, or other communication of any sort shall be made by Vendor to any third party regarding GALVESTON COUNTY'S purchase of goods or services hereunder, or of the details and characteristics thereof. Anything furnished to Vendor by GALVESTON COUNIY pursuant to this Purchase Order, including without limitation, samples, drawings, patterns, and materials shall remain the prop of GALVESTON COUNTY, shall be held at Vendor's risk, and shall be returned upon completion of the work. No disclosure or reproduction thereof in any form shall be made without GALVESTON COUNIY'S prior written consent.

15. FORCE MAJEURE: Neither party hereto shall be liable for delays or failure to perform any term, condition, or covenant of this Purchase Order due to causes beyond its reasonable control including, but not limited to, acts of God, strikes, epidemics, war, riots, flood, fire, sabotage, material or labor restrictions by any government authority, any other natural disaster, or any other circumstances of like character which are beyond the reasonable control of either party. In the event of such delay or failure to perform, the period specified for performance hereunder may be extended for a period equal to the time lost by reasons of the delay, or the total Purchase Order may be reduced by the performance (or portions thereof) omitted during such delay. The proV1sions of this paragraph shall be effective notwithstanding that such circumstances shall have been operative at the date of this Purchase Order.

16. GOVERNING LAW: This Purchase Order shall be governed in accordance with the laws of the State of Texas. Venue shall lie in Galveston County.

17. COMPLIANCE WITH LAW: Vendor is aware of; is fully informed about, and in and regulations, including 1itle VI of the Civil Rights Act of 1964, as amended (42 USC 2000(D)), Executive Order 11246, as amended (41 CFR 60-1 and 60-2), Vietnam Era Veterans Readjustment Act of 1974, as amended (41 CFR 60-250), Rehabilitation Act of 1973, as amended (41 CFR 60-741), Age Discrimination Act (42 USC 6101 ct seq.), Non-segregated Facilities (41 CFR 60-741), Omnibus Budget Reconciliation Provision, Section 952, Fair Labor Standards Act of 1938, Sections 6, 7, and 12, as amended, Immigration Reform and Control Act ofl986! and Utilization of Small Business Concerns and Small Business Concerns Owned and Control ed by Socially and Economically Disadvantaged Individuals (pl96-507), the Americans with Disabilities Act of 1990 (42 USC 12101 et seq.) and all federal laws and regulations, executive orders, state laws, and local laws as are applicable.

18. BUYER'S PREMISES RULES: If this Purchase Order requires the presence on GALVESTON COUNIY'S premises of Vendor's employees subcontractors or others under Vendor's control, Vendor shall comply with all applicable rules of such premises, including without limitation those relative to environmental quality, safety, fire prevention, no smoking, traffic, and parking.

19. ASSIGNMENT OF OVERCHARGE CLAIMS: Vendor hereby assigns to GALVESTON COUNTY any and all claims for overcharges associated with this Purchase Order arising under the antitrust laws of the United States, IS 0.S.C.A., Sec. 1 et seq. (1973), or arising under the antitrust laws of the State of Texas, Texas Business and Commerce Code Annotated, Sec. 15.01, et seq. (1967).

20. VENDOR'S AFFIRMATIONS: By acceptance of this Purchase Order and/or furnishing any of the products or services specified herein, Vendor affirms the following:

(a) That Vendor has not given, offered to give, nor intends to give at any time hereafter any economic opportunity, future employment, gift, loan, gratuity, special discount, trip favor, or service to a public servant in connection wiih this Purchase Order.

(b) That Vendor has not violated the antitrust laws of this State, codified in Section 15.01, et seq., Texas Business and Commerce Code, or the Federal antitrust laws.

(c) That no relationship, whether by relative, business associate, capital funding agreement, or any other such kinship, exists between Vendor and any current GALVESTON COUNTY employee, or any person previously employed by GALVESTON COUNTY within the immediate twelve (12) months prior to this award. If such relationship does exist, full disclosure must be made to the GALVESTON COUNTY Purchasing Agent prior to acceptance of Purchase Order for appropriate administrative review and approval.

(d) If Vendor is a corporation, that its Texas franchise taxes are current, or that the corporation is exempt from the payment of the franchise tax, or that the corporation is an out of-stale corporation that is not subject to Texas franchise tax, whichever is applicable.

21. OPEN RECORDS: All information, documentation, and other material submitted by Vendor in response to any solicitations or under any resulting contract thereof may be subject to public disclosure under the Texas Public Information Act (TX Gov't Code, Chapter552). Vendors are hereby notified that GALVESTON COUNTY strictly adheres to this statute and the interpretations thereof rendered by the Courts and/or Texas Attorney General's office. Vendor shall be deemed to have knowledge of this law and how lo protect their interests under it. Exceptions to disclosure of information as provided by this statute are intended to protect legitimate interests of the County or Vendor, and are not intended to serve as a means to Withhold or delay disclosure of information not covered by these exceptions.

22. PURCHASING AGENT'S AUIHORITY: The Galveston County Purchasing Agent is authorized to act on the County's behalf on any matter set forth in this Purchase Order.

23. NON-WAIVER OF DEFAULTS: Any failure of GALVESTON COUNTY, at any time or from time to time, to enforce or require the strict keeping and performance of any of the terms and conditions of this Purchase Order, or to exercise a right hereunder, shall not constitute a waiver of such terms, conditions, or rights, and shall not affect or impair same, or the right of GALVESTON COUNTY at any time to avail itself of same.

24. SEVERABLILITY: In the event that any provision of this Purchase Order, or the application thereof to any person or circumstance, is determined by a competent Court of Law to be invalid, unlawful, or unenforceable to any extent, the remainder of this Purchase Order, and the application of such provision to persons or circumstances other than those to which it is determined to be unlawful, unenforceable, or invalid to any extent, shall continue to be valid and may be enforced to the fullest extent permitted by law.

FAILURE TO DELIVER:
If the Vendor fails to deliver by the promised date, or reasonably thereafter, without giving acceptable reasons for delay, or if supplies are rejected for failure to meet specifications, the County reserves the right to purchase the specific item elsewhere and charge any increase in price and cost of handling to the Vendor. No substitutions or cancellations permitted without prior approval of the Purchasing Department of Galveston County.

SALES TAX EXEMPTION CERTIFICATE:
The undersigned claims an exemption from all sales taxes under Chapter 20, Title 122A, Revised Civil Statutes of Texas, for purchase of tangible personal property described in this numbered order, purchased from Vendor listed above.

By: _____

PURCHASING AGENT

THIS ORDER IS ISSUED SUBJECT TO GALVESTON COUNTY'S GENERAL TERMS AND CONDITIONS
ORIGINAL

TERMS AND CONDITIONS

I. COMPLETE AGREEMENT: This Purchase Order, which consists of these terms and conditions, the conditions contained within the referenced bid nunber, the contract entered into between Galveston County and Vendor (if any) and any other attached terms, conditions, and specifications of Galveston County, is the sole and exclusive agreement between the parties. It supersedes all other writings and is expressly conditioned upon Vendor's agreement to the conditions hereof. In addition, nothing herein shall be construed to be an acceptance of any terms of Vendor. In the event of any conflict between the terms and conditions of this Purchase Order and any Contract entered into between the County and the Vendor, the terms of the Contract shall prevail.

2. MODIFICATION: No modification of this Purchase Order shall be effective without Galveston County's prior written consent. No course of prior dealings, no usage of the trade and no course of performance shall be used to modify, supplement, or explain any terms used in this Purchase Order. Galveston County will not be bound by any oral statement, verbal agreement, or other representation contrary to the written specifications, terms, and conditions of this Purchase Order.

3. CANCELLATION: GALVESTON COUNTY shall have the right to cancel for default all or any part of this Purchase Order if Vendor breaches any of the terms, conditions, or requirements hereof, or if the Vendor becomes insolvent or commits acts of bankruptcy, or at any time for any reason or no reason prior to acceptance of delivery by GALVESTON COUNTY. Such right of cancellation is in addition to and not in lieu of any other remedies, which GALVESTON COUNTY may have in law or equity.

4. TERMINATION: The performance of work under this Purchase Order may be terminated in whole or in part by GALVESTON COUNIY in accordance with this provision. Termination of work hereunder shall be effected by the delivery to the Vendor of a "Notice of Termination" specifying the extent to which performance of work under the Purchase Order is terminated and the date upon which such termination becomes effective. Such right of termination is in addition to, and not in lieu of; rights of GALVESTON COUNTY set forth in Paragraph 3 above.

5. DELIVERY: Time is of the essence in this Purchase Order and if delivery of conforming goods or performance of services is not completed by the time(s) promised, GALVESTON COUNTY reserves the right, in addition lo its other rights and remedies, to cancel this Purchase Order, to reject nonconforming goods or services in whole or in part on reasonable notice to Vendor, and/or purchase substitute goods or services elsewhere and charge Vendor with any loss incurred. If delay in promised delivery is foreseen, Vendor shall give written notice to GALVESTON COUNTY, and the delivery date may be extended by GALVESTON COUNTY for valid reasons. Vendor must keep GALVESTON COUNTY advised at all times of status of Purchase Order. No substitutions or cancellations will be permitted without the prior written approval of GALVESTON COUNTY Purchasing Department. Delivery shall be made only on weekdays from 8:00a.m. to 5:00p.m., unless prior approval for other delivery times has been obtained Any provisions herein for delivery of goods or perfo1rnance of services by installments shall not be construed as making the obligation of Vendor severable. C.O.D. shipments will not be accepted.

6. ACCEPTANCE OF PRODUCTS AND SERVICES: All products furnished and all services perfo1rned under this Purchase Order shall be to the satisfaction of GALVESTON COUNTY and in accordance with the specifications, terms, and conditions of the Purchase Order and 3nY applicable contract. GALVESTON COUNTY reserves the right to inspect the products furnished or the services performed, and to determine the quality, acceptability, and fitness of such products or services.

7. INVOICING AND PAYMENT: Vendor shall submit an itemized invoice showing GALVESTON COUNTY Purchase Order number. Invoices must agree in all respects with this Purchase Order. Payment will normally be remitted within thirty (30) days after receipt of a properly submitted invoice. Failure to submit invoices in accordance with the requirements herein may delay payment. All cash discounts offered will be taken if earned. Cash discount will be calculated from date of receipt of properly submitted invoice at the Invoice Address specified on the face of this Purchase Order.

8. TITLE & RISK OF LOSS: The title and risk of loss of the goods shall not pass to GALVESTON COUNTY until GALVESTON COUNTY actually receives and takes possession of the goods at the point or points of delivery.

9. ASSIGNMENT/DELEGATION: No right or interest in this Purchase Order shall be assigned, and no obligation of Vendor shall be delegated, to any third party without the prior written consent of GALVESTON COUNTY. Any such assignment or delegation by Vendor shall be wholly void and totally ineffective for all purposes unless made in conformity wtth this paragraph.

10. INDEPENDENT CONTRACTOR: In performing any services hereunder Vendor is, and undertakes performance thereof as, an independent contractor, with sole responsibility for all per.ions employed in connection therewith, including without limitation, exclusive liability for the payment of all Federal, State, and local Unemployment and Disability Insurance and all Social Security and/or other taxes and contributions payable in respect of such persons, from and against which liability Vendor agrees to indemnify, exonerate and hold harmless GALVESTON COUNTY.

11. INSURANCE: If this Purchase Order requires the presence on GALVESTON COUNTY premises of Vendor's employees, subcontractors or others under Vendor's control, Vendor agrees, prior to commencement of any services hereunder, to transmit to GALVESTON COUNTY certificates of insurance as specified m the contract between parties.

12. INDEMNIFICATION: Vendor shall indemnify, exonerate, hold harmless and defend GALVESTON COUNTY and the COUNTY COMMISSIONER'S COURT from and against any actions or suits and any claims, liability, damage, loss, cost or expense as a result of bodily injury or death and/or property damage arising out of or in connection with this Purchase Order, unless caused by the sole negligence of GALVESTON COUNTY.

13. WARRANTIES: In addition to all warranties established by law, Vendor hereby warrants and agrees that:

(a) All goods and services covered by this Purchase Order shall conform to the specifications, drawings, samples, or other descriptions set forth herein or otherwise furnished or adopted by GALVESTON COUNTY, and shall be merchantable, fit for the purpose intended, of best quality and workmanship, and free from all defects. GALVESTON COUNTY shall have the right of inspection and approval, and may, at Vendor's expense, reject and return nonconforming goods or require re-petfo1rnance of services, which are not in compliance with the requirements of this Purchase Order. Defects shall not be deemed waived bv GALVESTON COUNTY'S failure to notify Vendor upon receipt of goods or completion of services, or by payment of invoice.

(b) All articles and/or services provided hereunder meet or exceed the Safety Standards established and promulgated under the Federal Occupational Safety and Health Administration (Public Law 91-596) and its regulations in effect or proposed as of the date of this Purchase Order.

(c) All goods delivered pursuant to this Purchase Order shall confo1rn to standards established for such goods in accordance with any applicable Federal, State, or local laws and regulations. unless otherwise indicated herein.

(d) The use or sale of any goods delivered hereunder, or any part thereof; does not infringe any adverse existing patent, trademark, copyright, or other intellectual property right. Vendor shall indemnify, exonerate, and save harmless GALVESTON COUNTY, its customers, users of its products and its and their successors and assigns, or any of them, from and against any and all liability, damage, loss cost or expense incurred in connection with any claim, suit or action for actual or alleged infringement of any such rights, and Vendor shall defend, at its expense, any such claim suit or action brought against GALVESTON COUNTY, its customers, users of its products and its and their successors and assigns, or any of them.

The foregoing warranties shall survive acceptance of goods and performance of services hereunder.

14. NON-DISCLOSURE: Unless required by law or consented to in writing by GALVESTON COUNTY, no disclosure, description, or other communication of any sort shall be made by Vendor to any third party regarding GALVESTON COUNTY'S purchase of goods or services hereunder, or of the details and characteristics thereof. Anything furnished to Vendor by GALVESTON COUNIY pursuant to this Purchase Order, including without limitation, samples, drawings, patterns, and materials shall remain the prop of GALVESTON COUNTY, shall be held at Vendor's risk, and shall be returned upon completion of the work. No disclosure or reproduction thereof in any form shall be made without GALVESTON COUNIY'S prior written consent.

15. FORCE MAJEURE: Neither party hereto shall be liable for delays or failure to perform any term, condition, or covenant of this Purchase Order due to causes beyond its reasonable control including, but not limited to, acts of God, strikes, epidemics, war, riots, flood, fire, sabotage, material or labor restrictions by any government authority, any other natural disaster, or any other circumstances of like character which are beyond the reasonable control of either party. In the event of such delay or failure to perform, the period specified for performance hereunder may be extended for a period equal to the time lost by reasons of the delay, or the total Purchase Order may be reduced by the performance (or portions thereof) omitted during such delay. The proV1sions of this paragraph shall be effective notwithstanding that such circumstances shall have been operative at the date of this Purchase Order.

16. GOVERNING LAW: This Purchase Order shall be governed in accordance with the laws of the State of Texas. Venue shall lie in Galveston County.

17. COMPLIANCE WITH LAW: Vendor is aware of; is fully informed about, and in and regulations, including 1itle VI of the Civil Rights Act of 1964, as amended (42 USC 2000(D)), Executive Order 11246, as amended (41 CFR 60-1 and 60-2), Vietnam Era Veterans Readjustment Act of 1974, as amended (41 CFR 60-250), Rehabilitation Act of 1973, as amended (41 CFR 60-741), Age Discrimination Act (42 USC 6101 ct seq.), Non-segregated Facilities (41 CFR 60-741), Omnibus Budget Reconciliation Provision, Section 952, Fair Labor Standards Act of 1938, Sections 6, 7, and 12, as amended, Immigration Reform and Control Act ofl986! and Utilization of Small Business Concerns and Small Business Concerns Owned and Control ed by Socially and Economically Disadvantaged Individuals (pl96-507), the Americans with Disabilities Act of 1990 (42 USC 12101 et seq.) and all federal laws and regulations, executive orders, state laws, and local laws as are applicable.

18. BUYER'S PREMISES RULES: If this Purchase Order requires the presence on GALVESTON COUNIY'S premises of Vendor's employees subcontractors or others under Vendor's control, Vendor shall comply with all applicable rules of such premises, including without limitation those relative to environmental quality, safety, fire prevention, no smoking, traffic, and parking.

19. ASSIGNMENT OF OVERCHARGE CLAIMS: Vendor hereby assigns to GALVESTON COUNTY any and all claims for overcharges associated with this Purchase Order arising under the antitrust laws of the United States, IS 0.S.C.A., Sec. 1 et seq. (1973), or arising under the antitrust laws of the State of Texas, Texas Business and Commerce Code Annotated, Sec. 15.01, et seq. (1967).

20. VENDOR'S AFFIRMATIONS: By acceptance of this Purchase Order and/or furnishing any of the products or services specified herein, Vendor affirms the following:

(a) That Vendor has not given, offered to give, nor intends to give at any time hereafter any economic opportunity, future employment, gift, loan, gratuity, special discount, trip favor, or service to a public servant in connection wiih this Purchase Order.

(b) That Vendor has not violated the antitrust laws of this State, codified in Section 15.01, et seq., Texas Business and Commerce Code, or the Federal antitrust laws.

(c) That no relationship, whether by relative, business associate, capital funding agreement, or any other such kinship, exists between Vendor and any current GALVESTON COUNTY employee, or any person previously employed by GALVESTON COUNTY within the immediate twelve (12) months prior to this award. If such relationship does exist, full disclosure must be made to the GALVESTON COUNTY Purchasing Agent prior to acceptance of Purchase Order for appropriate administrative review and approval.

(d) If Vendor is a corporation, that its Texas franchise taxes are current, or that the corporation is exempt from the payment of the franchise tax, or that the corporation is an out of-stale corporation that is not subject to Texas franchise tax, whichever is applicable.

21. OPEN RECORDS: All information, documentation, and other material submitted by Vendor in response to any solicitations or under any resulting contract thereof may be subject to public disclosure under the Texas Public Information Act (TX Gov't Code, Chapter552). Vendors are hereby notified that GALVESTON COUNTY strictly adheres to this statute and the interpretations thereof rendered by the Courts and/or Texas Attorney General's office. Vendor shall be deemed to have knowledge of this law and how lo protect their interests under it. Exceptions to disclosure of information as provided by this statute are intended to protect legitimate interests of the County or Vendor, and are not intended to serve as a means to Withhold or delay disclosure of information not covered by these exceptions.

22. PURCHASING AGENT'S AUIHORITY: The Galveston County Purchasing Agent is authorized to act on the County's behalf on any matter set forth in this Purchase Order.

23. NON-WAIVER OF DEFAULTS: Any failure of GALVESTON COUNTY, at any time or from time to time, to enforce or require the strict keeping and performance of any of the terms and conditions of this Purchase Order, or to exercise a right hereunder, shall not constitute a waiver of such terms, conditions, or rights, and shall not affect or impair same, or the right of GALVESTON COUNTY at any time to avail itself of same.

24. SEVERABLILITY: In the event that any provision of this Purchase Order, or the application thereof to any person or circumstance, is determined by a competent Court of Law to be invalid, unlawful, or unenforceable to any extent, the remainder of this Purchase Order, and the application of such provision to persons or circumstances other than those to which it is determined to be unlawful, unenforceable, or invalid to any extent, shall continue to be valid and may be enforced to the fullest extent permitted by law.

The undersigned claims an exemption from all sales taxes under Chapter 20, Title 122A, Revised Civil Statutes of Texas, for purchase of tangible personal property described in this numbered order, purchased from Vendor listed above.

By: _____

PURCHASING AGENT

THIS ORDER IS ISSUED SUBJECT TO GALVESTON COUNTY'S GENERAL TERMS AND CONDITIONS
ORIGINAL

TERMS AND CONDITIONS

I. COMPLETE AGREEMENT: This Purchase Order, which consists of these terms and conditions, the conditions contained within the referenced bid nunber, the contract entered into between Galveston County and Vendor (if any) and any other attached terms, conditions, and specifications of Galveston County, is the sole and exclusive agreement between the parties. It supersedes all other writings and is expressly conditioned upon Vendor's agreement to the conditions hereof. In addition, nothing herein shall be construed to be an acceptance of any terms of Vendor. In the event of any conflict between the terms and conditions of this Purchase Order and any Contract entered into between the County and the Vendor, the terms of the Contract shall prevail.

2. MODIFICATION: No modification of this Purchase Order shall be effective without Galveston County's prior written consent. No course of prior dealings, no usage of the trade and no course of performance shall be used to modify, supplement, or explain any terms used in this Purchase Order. Galveston County will not be bound by any oral statement, verbal agreement, or other representation contrary to the written specifications, terms, and conditions of this Purchase Order.

3. CANCELLATION: GALVESTON COUNTY shall have the right to cancel for default all or any part of this Purchase Order if Vendor breaches any of the terms, conditions, or requirements hereof, or if the Vendor becomes insolvent or commits acts of bankruptcy, or at any time for any reason or no reason prior to acceptance of delivery by GALVESTON COUNTY. Such right of cancellation is in addition to and not in lieu of any other remedies, which GALVESTON COUNTY may have in law or equity.

4. TERMINATION: The performance of work under this Purchase Order may be terminated in whole or in part by GALVESTON COUNIY in accordance with this provision. Termination of work hereunder shall be effected by the delivery to the Vendor of a "Notice of Termination" specifying the extent to which performance of work under the Purchase Order is terminated and the date upon which such termination becomes effective. Such right of termination is in addition to, and not in lieu of; rights of GALVESTON COUNTY set forth in Paragraph 3 above.

5. DELIVERY: Time is of the essence in this Purchase Order and if delivery of conforming goods or performance of services is not completed by the time(s) promised, GALVESTON COUNTY reserves the right, in addition lo its other rights and remedies, to cancel this Purchase Order, to reject nonconforming goods or services in whole or in part on reasonable notice to Vendor, and/or purchase substitute goods or services elsewhere and charge Vendor with any loss incurred. If delay in promised delivery is foreseen, Vendor shall give written notice to GALVESTON COUNTY, and the delivery date may be extended by GALVESTON COUNTY for valid reasons. Vendor must keep GALVESTON COUNTY advised at all times of status of Purchase Order. No substitutions or cancellations will be permitted without the prior written approval of GALVESTON COUNTY Purchasing Department. Delivery shall be made only on weekdays from 8:00a.m. to 5:00p.m., unless prior approval for other delivery times has been obtained Any provisions herein for delivery of goods or perfo1rnance of services by installments shall not be construed as making the obligation of Vendor severable. C.O.D. shipments will not be accepted.

6. ACCEPTANCE OF PRODUCTS AND SERVICES: All products furnished and all services perfo1rned under this Purchase Order shall be to the satisfaction of GALVESTON COUNTY and in accordance with the specifications, terms, and conditions of the Purchase Order and 3nY applicable contract. GALVESTON COUNTY reserves the right to inspect the products furnished or the services performed, and to determine the quality, acceptability, and fitness of such products or services.

7. INVOICING AND PAYMENT: Vendor shall submit an itemized invoice showing GALVESTON COUNTY Purchase Order number. Invoices must agree in all respects with this Purchase Order. Payment will normally be remitted within thirty (30) days after receipt of a properly submitted invoice. Failure to submit invoices in accordance with the requirements herein may delay payment. All cash discounts offered will be taken if earned. Cash discount will be calculated from date of receipt of properly submitted invoice at the Invoice Address specified on the face of this Purchase Order.

8. TITLE & RISK OF LOSS: The title and risk of loss of the goods shall not pass to GALVESTON COUNTY until GALVESTON COUNTY actually receives and takes possession of the goods at the point or points of delivery.

9. ASSIGNMENT/DELEGATION: No right or interest in this Purchase Order shall be assigned, and no obligation of Vendor shall be delegated, to any third party without the prior written consent of GALVESTON COUNTY. Any such assignment or delegation by Vendor shall be wholly void and totally ineffective for all purposes unless made in conformity wtth this paragraph.

10. INDEPENDENT CONTRACTOR: In performing any services hereunder Vendor is, and undertakes performance thereof as, an independent contractor, with sole responsibility for all per.ions employed in connection therewith, including without limitation, exclusive liability for the payment of all Federal, State, and local Unemployment and Disability Insurance and all Social Security and/or other taxes and contributions payable in respect of such persons, from and against which liability Vendor agrees to indemnify, exonerate and hold harmless GALVESTON COUNTY.

11. INSURANCE: If this Purchase Order requires the presence on GALVESTON COUNTY premises of Vendor's employees, subcontractors or others under Vendor's control, Vendor agrees, prior to commencement of any services hereunder, to transmit to GALVESTON COUNTY certificates of insurance as specified m the contract between parties.

12. INDEMNIFICATION: Vendor shall indemnify, exonerate, hold harmless and defend GALVESTON COUNTY and the COUNTY COMMISSIONER'S COURT from and against any actions or suits and any claims, liability, damage, loss, cost or expense as a result of bodily injury or death and/or property damage arising out of or in connection with this Purchase Order, unless caused by the sole negligence of GALVESTON COUNTY.

13. WARRANTIES: In addition to all warranties established by law, Vendor hereby warrants and agrees that:

(a) All goods and services covered by this Purchase Order shall conform to the specifications, drawings, samples, or other descriptions set forth herein or otherwise furnished or adopted by GALVESTON COUNTY, and shall be merchantable, fit for the purpose intended, of best quality and workmanship, and free from all defects. GALVESTON COUNTY shall have the right of inspection and approval, and may, at Vendor's expense, reject and return nonconforming goods or require re-petfo1rnance of services, which are not in compliance with the requirements of this Purchase Order. Defects shall not be deemed waived bv GALVESTON COUNTY'S failure to notify Vendor upon receipt of goods or completion of services, or by payment of invoice.

(b) All articles and/or services provided hereunder meet or exceed the Safety Standards established and promulgated under the Federal Occupational Safety and Health Administration (Public Law 91-596) and its regulations in effect or proposed as of the date of this Purchase Order.

(c) All goods delivered pursuant to this Purchase Order shall confo1rn to standards established for such goods in accordance with any applicable Federal, State, or local laws and regulations. unless otherwise indicated herein.

(d) The use or sale of any goods delivered hereunder, or any part thereof; does not infringe any adverse existing patent, trademark, copyright, or other intellectual property right. Vendor shall indemnify, exonerate, and save harmless GALVESTON COUNTY, its customers, users of its products and its and their successors and assigns, or any of them, from and against any and all liability, damage, loss cost or expense incurred in connection with any claim, suit or action for actual or alleged infringement of any such rights, and Vendor shall defend, at its expense, any such claim suit or action brought against GALVESTON COUNTY, its customers, users of its products and its and their successors and assigns, or any of them.

The foregoing warranties shall survive acceptance of goods and performance of services hereunder.

14. NON-DISCLOSURE: Unless required by law or consented to in writing by GALVESTON COUNTY, no disclosure, description, or other communication of any sort shall be made by Vendor to any third party regarding GALVESTON COUNTY'S purchase of goods or services hereunder, or of the details and characteristics thereof. Anything furnished to Vendor by GALVESTON COUNIY pursuant to this Purchase Order, including without limitation, samples, drawings, patterns, and materials shall remain the prop of GALVESTON COUNTY, shall be held at Vendor's risk, and shall be returned upon completion of the work. No disclosure or reproduction thereof in any form shall be made without GALVESTON COUNIY'S prior written consent.

15. FORCE MAJEURE: Neither party hereto shall be liable for delays or failure to perform any term, condition, or covenant of this Purchase Order due to causes beyond its reasonable control including, but not limited to, acts of God, strikes, epidemics, war, riots, flood, fire, sabotage, material or labor restrictions by any government authority, any other natural disaster, or any other circumstances of like character which are beyond the reasonable control of either party. In the event of such delay or failure to perform, the period specified for performance hereunder may be extended for a period equal to the time lost by reasons of the delay, or the total Purchase Order may be reduced by the performance (or portions thereof) omitted during such delay. The proV1sions of this paragraph shall be effective notwithstanding that such circumstances shall have been operative at the date of this Purchase Order.

16. GOVERNING LAW: This Purchase Order shall be governed in accordance with the laws of the State of Texas. Venue shall lie in Galveston County.

17. COMPLIANCE WITH LAW: Vendor is aware of; is fully informed about, and in and regulations, including 1itle VI of the Civil Rights Act of 1964, as amended (42 USC 2000(D)), Executive Order 11246, as amended (41 CFR 60-1 and 60-2), Vietnam Era Veterans Readjustment Act of 1974, as amended (41 CFR 60-250), Rehabilitation Act of 1973, as amended (41 CFR 60-741), Age Discrimination Act (42 USC 6101 ct seq.), Non-segregated Facilities (41 CFR 60-741), Omnibus Budget Reconciliation Provision, Section 952, Fair Labor Standards Act of 1938, Sections 6, 7, and 12, as amended, Immigration Reform and Control Act ofl986! and Utilization of Small Business Concerns and Small Business Concerns Owned and Control ed by Socially and Economically Disadvantaged Individuals (pl96-507), the Americans with Disabilities Act of 1990 (42 USC 12101 et seq.) and all federal laws and regulations, executive orders, state laws, and local laws as are applicable.

18. BUYER'S PREMISES RULES: If this Purchase Order requires the presence on GALVESTON COUNIY'S premises of Vendor's employees subcontractors or others under Vendor's control, Vendor shall comply with all applicable rules of such premises, including without limitation those relative to environmental quality, safety, fire prevention, no smoking, traffic, and parking.

19. ASSIGNMENT OF OVERCHARGE CLAIMS: Vendor hereby assigns to GALVESTON COUNTY any and all claims for overcharges associated with this Purchase Order arising under the antitrust laws of the United States, IS 0.S.C.A., Sec. 1 et seq. (1973), or arising under the antitrust laws of the State of Texas, Texas Business and Commerce Code Annotated, Sec. 15.01, et seq. (1967).

20. VENDOR'S AFFIRMATIONS: By acceptance of this Purchase Order and/or furnishing any of the products or services specified herein, Vendor affirms the following:

(a) That Vendor has not given, offered to give, nor intends to give at any time hereafter any economic opportunity, future employment, gift, loan, gratuity, special discount, trip favor, or service to a public servant in connection wiih this Purchase Order.

(b) That Vendor has not violated the antitrust laws of this State, codified in Section 15.01, et seq., Texas Business and Commerce Code, or the Federal antitrust laws.

(c) That no relationship, whether by relative, business associate, capital funding agreement, or any other such kinship, exists between Vendor and any current GALVESTON COUNTY employee, or any person previously employed by GALVESTON COUNTY within the immediate twelve (12) months prior to this award. If such relationship does exist, full disclosure must be made to the GALVESTON COUNTY Purchasing Agent prior to acceptance of Purchase Order for appropriate administrative review and approval.

(d) If Vendor is a corporation, that its Texas franchise taxes are current, or that the corporation is exempt from the payment of the franchise tax, or that the corporation is an out of-stale corporation that is not subject to Texas franchise tax, whichever is applicable.

21. OPEN RECORDS: All information, documentation, and other material submitted by Vendor in response to any solicitations or under any resulting contract thereof may be subject to public disclosure under the Texas Public Information Act (TX Gov't Code, Chapter552). Vendors are hereby notified that GALVESTON COUNTY strictly adheres to this statute and the interpretations thereof rendered by the Courts and/or Texas Attorney General's office. Vendor shall be deemed to have knowledge of this law and how lo protect their interests under it. Exceptions to disclosure of information as provided by this statute are intended to protect legitimate interests of the County or Vendor, and are not intended to serve as a means to Withhold or delay disclosure of information not covered by these exceptions.

22. PURCHASING AGENT'S AUIHORITY: The Galveston County Purchasing Agent is authorized to act on the County's behalf on any matter set forth in this Purchase Order.

23. NON-WAIVER OF DEFAULTS: Any failure of GALVESTON COUNTY, at any time or from time to time, to enforce or require the strict keeping and performance of any of the terms and conditions of this Purchase Order, or to exercise a right hereunder, shall not constitute a waiver of such terms, conditions, or rights, and shall not affect or impair same, or the right of GALVESTON COUNTY at any time to avail itself of same.

24. SEVERABLILITY: In the event that any provision of this Purchase Order, or the application thereof to any person or circumstance, is determined by a competent Court of Law to be invalid, unlawful, or unenforceable to any extent, the remainder of this Purchase Order, and the application of such provision to persons or circumstances other than those to which it is determined to be unlawful, unenforceable, or invalid to any extent, shall continue to be valid and may be enforced to the fullest extent permitted by law.

FAILURE TO DELIVER:
If the Vendor fails to deliver by the promised date, or reasonably thereafter, without giving acceptable reasons for delay, or if supplies are rejected for failure to meet specifications, the County reserves the right to purchase the specific item elsewhere and charge any increase in price and cost of handling to the Vendor. No substitutions or cancellations permitted without prior approval of the Purchasing Department of Galveston County.

SALES TAX EXEMPTION CERTIFICATE:
The undersigned claims an exemption from all sales taxes under Chapter 20, Title 122A, Revised Civil Statutes of Texas, for purchase of tangible personal property described in this numbered order, purchased from Vendor listed above.

By: _____

PURCHASING AGENT

THIS ORDER IS ISSUED SUBJECT TO GALVESTON COUNTY'S GENERAL TERMS AND CONDITIONS
ORIGINAL

TERMS AND CONDITIONS

I. COMPLETE AGREEMENT: This Purchase Order, which consists of these terms and conditions, the conditions contained within the referenced bid nunber, the contract entered into between Galveston County and Vendor (if any) and any other attached terms, conditions, and specifications of Galveston County, is the sole and exclusive agreement between the parties. It supersedes all other writings and is expressly conditioned upon Vendor's agreement to the conditions hereof. In addition, nothing herein shall be construed to be an acceptance of any terms of Vendor. In the event of any conflict between the terms and conditions of this Purchase Order and any Contract entered into between the County and the Vendor, the terms of the Contract shall prevail.

2. MODIFICATION: No modification of this Purchase Order shall be effective without Galveston County's prior written consent. No course of prior dealings, no usage of the trade and no course of performance shall be used to modify, supplement, or explain any terms used in this Purchase Order. Galveston County will not be bound by any oral statement, verbal agreement, or other representation contrary to the written specifications, terms, and conditions of this Purchase Order.

3. CANCELLATION: GALVESTON COUNTY shall have the right to cancel for default all or any part of this Purchase Order if Vendor breaches any of the terms, conditions, or requirements hereof, or if the Vendor becomes insolvent or commits acts of bankruptcy, or at any time for any reason or no reason prior to acceptance of delivery by GALVESTON COUNTY. Such right of cancellation is in addition to and not in lieu of any other remedies, which GALVESTON COUNTY may have in law or equity.

4. TERMINATION: The performance of work under this Purchase Order may be terminated in whole or in part by GALVESTON COUNIY in accordance with this provision. Termination of work hereunder shall be effected by the delivery to the Vendor of a "Notice of Termination" specifying the extent to which performance of work under the Purchase Order is terminated and the date upon which such termination becomes effective. Such right of termination is in addition to, and not in lieu of; rights of GALVESTON COUNTY set forth in Paragraph 3 above.

5. DELIVERY: Time is of the essence in this Purchase Order and if delivery of conforming goods or performance of services is not completed by the time(s) promised, GALVESTON COUNTY reserves the right, in addition lo its other rights and remedies, to cancel this Purchase Order, to reject nonconforming goods or services in whole or in part on reasonable notice to Vendor, and/or purchase substitute goods or services elsewhere and charge Vendor with any loss incurred. If delay in promised delivery is foreseen, Vendor shall give written notice to GALVESTON COUNTY, and the delivery date may be extended by GALVESTON COUNTY for valid reasons. Vendor must keep GALVESTON COUNTY advised at all times of status of Purchase Order. No substitutions or cancellations will be permitted without the prior written approval of GALVESTON COUNTY Purchasing Department. Delivery shall be made only on weekdays from 8:00a.m. to 5:00p.m., unless prior approval for other delivery times has been obtained Any provisions herein for delivery of goods or perfo1rnance of services by installments shall not be construed as making the obligation of Vendor severable. C.O.D. shipments will not be accepted.

6. ACCEPTANCE OF PRODUCTS AND SERVICES: All products furnished and all services perfo1rned under this Purchase Order shall be to the satisfaction of GALVESTON COUNTY and in accordance with the specifications, terms, and conditions of the Purchase Order and 3nY applicable contract. GALVESTON COUNTY reserves the right to inspect the products furnished or the services performed, and to determine the quality, acceptability, and fitness of such products or services.

7. INVOICING AND PAYMENT: Vendor shall submit an itemized invoice showing GALVESTON COUNTY Purchase Order number. Invoices must agree in all respects with this Purchase Order. Payment will normally be remitted within thirty (30) days after receipt of a properly submitted invoice. Failure to submit invoices in accordance with the requirements herein may delay payment. All cash discounts offered will be taken if earned. Cash discount will be calculated from date of receipt of properly submitted invoice at the Invoice Address specified on the face of this Purchase Order.

8. TITLE & RISK OF LOSS: The title and risk of loss of the goods shall not pass to GALVESTON COUNTY until GALVESTON COUNTY actually receives and takes possession of the goods at the point or points of delivery.

9. ASSIGNMENT/DELEGATION: No right or interest in this Purchase Order shall be assigned, and no obligation of Vendor shall be delegated, to any third party without the prior written consent of GALVESTON COUNTY. Any such assignment or delegation by Vendor shall be wholly void and totally ineffective for all purposes unless made in conformity wtth this paragraph.

10. INDEPENDENT CONTRACTOR: In performing any services hereunder Vendor is, and undertakes performance thereof as, an independent contractor, with sole responsibility for all per.ions employed in connection therewith, including without limitation, exclusive liability for the payment of all Federal, State, and local Unemployment and Disability Insurance and all Social Security and/or other taxes and contributions payable in respect of such persons, from and against which liability Vendor agrees to indemnify, exonerate and hold harmless GALVESTON COUNTY.

11. INSURANCE: If this Purchase Order requires the presence on GALVESTON COUNTY premises of Vendor's employees, subcontractors or others under Vendor's control, Vendor agrees, prior to commencement of any services hereunder, to transmit to GALVESTON COUNTY certificates of insurance as specified m the contract between parties.

12. INDEMNIFICATION: Vendor shall indemnify, exonerate, hold harmless and defend GALVESTON COUNTY and the COUNTY COMMISSIONER'S COURT from and against any actions or suits and any claims, liability, damage, loss, cost or expense as a result of bodily injury or death and/or property damage arising out of or in connection with this Purchase Order, unless caused by the sole negligence of GALVESTON COUNTY.

13. WARRANTIES: In addition to all warranties established by law, Vendor hereby warrants and agrees that:

(a) All goods and services covered by this Purchase Order shall conform to the specifications, drawings, samples, or other descriptions set forth herein or otherwise furnished or adopted by GALVESTON COUNTY, and shall be merchantable, fit for the purpose intended, of best quality and workmanship, and free from all defects. GALVESTON COUNTY shall have the right of inspection and approval, and may, at Vendor's expense, reject and return nonconforming goods or require re-petfo1rnance of services, which are not in compliance with the requirements of this Purchase Order. Defects shall not be deemed waived bv GALVESTON COUNTY'S failure to notify Vendor upon receipt of goods or completion of services, or by payment of invoice.

(b) All articles and/or services provided hereunder meet or exceed the Safety Standards established and promulgated under the Federal Occupational Safety and Health Administration (Public Law 91-596) and its regulations in effect or proposed as of the date of this Purchase Order.

(c) All goods delivered pursuant to this Purchase Order shall confo1rn to standards established for such goods in accordance with any applicable Federal, State, or local laws and regulations. unless otherwise indicated herein.

(d) The use or sale of any goods delivered hereunder, or any part thereof; does not infringe any adverse existing patent, trademark, copyright, or other intellectual property right. Vendor shall indemnify, exonerate, and save harmless GALVESTON COUNTY, its customers, users of its products and its and their successors and assigns, or any of them, from and against any and all liability, damage, loss cost or expense incurred in connection with any claim, suit or action for actual or alleged infringement of any such rights, and Vendor shall defend, at its expense, any such claim suit or action brought against GALVESTON COUNTY, its customers, users of its products and its and their successors and assigns, or any of them.

The foregoing warranties shall survive acceptance of goods and performance of services hereunder.

14. NON-DISCLOSURE: Unless required by law or consented to in writing by GALVESTON COUNTY, no disclosure, description, or other communication of any sort shall be made by Vendor to any third party regarding GALVESTON COUNTY'S purchase of goods or services hereunder, or of the details and characteristics thereof. Anything furnished to Vendor by GALVESTON COUNIY pursuant to this Purchase Order, including without limitation, samples, drawings, patterns, and materials shall remain the prop of GALVESTON COUNTY, shall be held at Vendor's risk, and shall be returned upon completion of the work. No disclosure or reproduction thereof in any form shall be made without GALVESTON COUNIY'S prior written consent.

15. FORCE MAJEURE: Neither party hereto shall be liable for delays or failure to perform any term, condition, or covenant of this Purchase Order due to causes beyond its reasonable control including, but not limited to, acts of God, strikes, epidemics, war, riots, flood, fire, sabotage, material or labor restrictions by any government authority, any other natural disaster, or any other circumstances of like character which are beyond the reasonable control of either party. In the event of such delay or failure to perform, the period specified for performance hereunder may be extended for a period equal to the time lost by reasons of the delay, or the total Purchase Order may be reduced by the performance (or portions thereof) omitted during such delay. The proV1sions of this paragraph shall be effective notwithstanding that such circumstances shall have been operative at the date of this Purchase Order.

16. GOVERNING LAW: This Purchase Order shall be governed in accordance with the laws of the State of Texas. Venue shall lie in Galveston County.

17. COMPLIANCE WITH LAW: Vendor is aware of; is fully informed about, and in and regulations, including 1itle VI of the Civil Rights Act of 1964, as amended (42 USC 2000(D)), Executive Order 11246, as amended (41 CFR 60-1 and 60-2), Vietnam Era Veterans Readjustment Act of 1974, as amended (41 CFR 60-250), Rehabilitation Act of 1973, as amended (41 CFR 60-741), Age Discrimination Act (42 USC 6101 ct seq.), Non-segregated Facilities (41 CFR 60-741), Omnibus Budget Reconciliation Provision, Section 952, Fair Labor Standards Act of 1938, Sections 6, 7, and 12, as amended, Immigration Reform and Control Act ofl986! and Utilization of Small Business Concerns and Small Business Concerns Owned and Control ed by Socially and Economically Disadvantaged Individuals (pl96-507), the Americans with Disabilities Act of 1990 (42 USC 12101 et seq.) and all federal laws and regulations, executive orders, state laws, and local laws as are applicable.

18. BUYER'S PREMISES RULES: If this Purchase Order requires the presence on GALVESTON COUNIY'S premises of Vendor's employees subcontractors or others under Vendor's control, Vendor shall comply with all applicable rules of such premises, including without limitation those relative to environmental quality, safety, fire prevention, no smoking, traffic, and parking.

19. ASSIGNMENT OF OVERCHARGE CLAIMS: Vendor hereby assigns to GALVESTON COUNTY any and all claims for overcharges associated with this Purchase Order arising under the antitrust laws of the United States, IS 0.S.C.A., Sec. 1 et seq. (1973), or arising under the antitrust laws of the State of Texas, Texas Business and Commerce Code Annotated, Sec. 15.01, et seq. (1967).

20. VENDOR'S AFFIRMATIONS: By acceptance of this Purchase Order and/or furnishing any of the products or services specified herein, Vendor affirms the following:

(a) That Vendor has not given, offered to give, nor intends to give at any time hereafter any economic opportunity, future employment, gift, loan, gratuity, special discount, trip favor, or service to a public servant in connection wiih this Purchase Order.

(b) That Vendor has not violated the antitrust laws of this State, codified in Section 15.01, et seq., Texas Business and Commerce Code, or the Federal antitrust laws.

(c) That no relationship, whether by relative, business associate, capital funding agreement, or any other such kinship, exists between Vendor and any current GALVESTON COUNTY employee, or any person previously employed by GALVESTON COUNTY within the immediate twelve (12) months prior to this award. If such relationship does exist, full disclosure must be made to the GALVESTON COUNTY Purchasing Agent prior to acceptance of Purchase Order for appropriate administrative review and approval.

(d) If Vendor is a corporation, that its Texas franchise taxes are current, or that the corporation is exempt from the payment of the franchise tax, or that the corporation is an out of-stale corporation that is not subject to Texas franchise tax, whichever is applicable.

21. OPEN RECORDS: All information, documentation, and other material submitted by Vendor in response to any solicitations or under any resulting contract thereof may be subject to public disclosure under the Texas Public Information Act (TX Gov't Code, Chapter552). Vendors are hereby notified that GALVESTON COUNTY strictly adheres to this statute and the interpretations thereof rendered by the Courts and/or Texas Attorney General's office. Vendor shall be deemed to have knowledge of this law and how lo protect their interests under it. Exceptions to disclosure of information as provided by this statute are intended to protect legitimate interests of the County or Vendor, and are not intended to serve as a means to Withhold or delay disclosure of information not covered by these exceptions.

22. PURCHASING AGENT'S AUIHORITY: The Galveston County Purchasing Agent is authorized to act on the County's behalf on any matter set forth in this Purchase Order.

23. NON-WAIVER OF DEFAULTS: Any failure of GALVESTON COUNTY, at any time or from time to time, to enforce or require the strict keeping and performance of any of the terms and conditions of this Purchase Order, or to exercise a right hereunder, shall not constitute a waiver of such terms, conditions, or rights, and shall not affect or impair same, or the right of GALVESTON COUNTY at any time to avail itself of same.

24. SEVERABLILITY: In the event that any provision of this Purchase Order, or the application thereof to any person or circumstance, is determined by a competent Court of Law to be invalid, unlawful, or unenforceable to any extent, the remainder of this Purchase Order, and the application of such provision to persons or circumstances other than those to which it is determined to be unlawful, unenforceable, or invalid to any extent, shall continue to be valid and may be enforced to the fullest extent permitted by law.

Hi Austin,

We don’t have anymore UTVs to purchase this fiscal year.

I have requested 4 for FY26.

Thank you!

Good morning, Julie,

The UTV's have been reclassified and the budget is available for use.

We reclassified two of the UTV's to free up the budget. However, just to confirm, are all of these line items in the PO-0000946 for UTV's (6 total)? Are there any other UTV's? If so, we will do a budget amendment to reclassify the rest to vehicles spend category. Again, however, the budget is currently available. Thank you.

Sincerely,

Austin Schumann

Subject: RE: Requisitions & PO updates

The original request may have had them budgeted in 5742000, but if you'll notice how it truly went through court, they were budgeted in 5743000. I'm thinking there may have been a discussion between our offices on where they should be paid from/budgeted. See attached. Sounds like we just need to reclass.

I believe Christie is going to work with Austin to get this taken care of. The PO# definitely will help/provide additional support.

Thanks,
Lauren

Subject: RE: Requisitions & PO updates

Attached is the Budget Amendment Request for the UTVs. The funds were put in 2601522042 5742000.

The PO (PO-0000946) paid for them out of Heavy Equipment, I think. I can't look up the PO number to verify since I didn't do the requisition.

So if we need to reclass them to vehicles, how does that work and what do you need from me to do it?

Thanks,

Julie

Were they purchased out of Heavy Equipment? If so, it sounds like we just need to reclass those purchases to Vehicles and that will free up your budget.

Subject: RE: Requisitions & PO updates

The UTVs have already been purchased.

I am trying to get the PO for the mobile restroom trailer approved.

So do we need to move the money from vehicles to heavy equipment in order to get the mobile restroom trailer requisition approved? The mobile restroom was budgeted for out of the heavy equipment line item.

Subject: RE: Requisitions & PO updates

Good afternoon,

I'm including Christie since she is over the fixed assets in our department. I believe UTVs are not considered Heavy Equipment, but more closely to Vehicles (which is how they were budgeted in February). I looked at prior purchases of UTVs, and it looks like they were also paid out of the Vehicles line item. I see that the full $40K requested is still available (see second attachment). Is the issue that the PO request is in Heavy Equipment? If so, I believe the requisition needs to be

adjusted.

Christie, please provide your thoughts.

Thanks,
Lauren

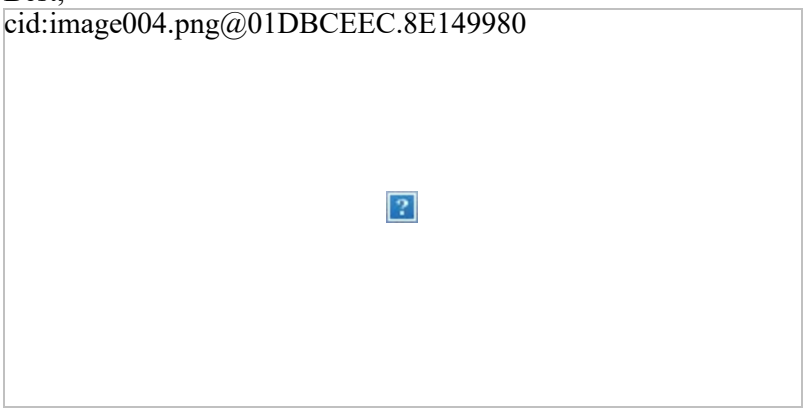
Subject: Re: Requisitions & PO updates

Hi Julie,



Upon review, the funding amount appears to be in order. However, based on Lauren's recommendation, the budget amendment for the two pending UTVs was recorded under the same ledger account but categorized under a different spend category—Vehicles.

I've included Lauren in this email so she can initiate the necessary reclassification for those 2 UTV units. Once that adjustment is made, you should be able to move forward with your requisition without encountering any funding issues.

Please let me know if you have any further questions.

Thank you.

Best,

Good morning Julie,

We will review the accounts and get back to you with our findings regarding the Capital Equipment budget.

Thank you.

Subject: RE: Requisitions & PO updates

Good Morning,

I guess I am just confused how the funds for a budgeted item, approved by Commissioners Court, are now just gone?

In FY25 Court approved the following items in Capital Equipment – 5742000

- 4 UTVs - $80,000 (purchased $84,598 – over $4,598)
- Mobile Restroom - $65,000
- Beach Tractor - $183,000 (the actually cost of the tractor was $176,831.35 – savings of $6,168.65)

Total - $328,000

On 2/3 Court approved the purchase of 2 more UTVs, putting an additional $40,000 in that budget. Making the total budget in that line item **$368,000.**

@Huallpa, Diana Can you assist me in finding out why there is a shortfall in that line item before I request a budget amendment that seems to be unnecessary?

Thank you,

Julie

Subject: RE: Requisitions & PO updates
Importance: High

Hi Martha,

I'm out of office, but wanted to provide you with an update on REQ-0002456.
I've sent back the requisition in Workday, because you'll need a budget amendment to be completed to remove the requisition from a budget fail status.
The budget available for Heavy Equipment is $328,000 and you have already spent $294,101.35 (which only leaves a balance of $33,898.65).

For a bit of context;
I know when you look at your manager budgetary balance report, you see a balance of $73k, so at the surface level, it appears you had enough to process your requisition.

However, the 2 capital outlay expenditures are combined in Workday, which fall under one ledger (Capital Outlays).

I hope this helps clear up some of the confusion, but please let me know if you have any additional questions or concerns.

Thank You,
Erin Quiroga, MBA, CPPB

Subject: Requisitions & PO updates

Good afternoon Erin,

I was checking on a few requisitions & the one PO that needed a variance to see if you could give me updates:

- REQ-0002882 Hwy 3 boat ramp construction project, this had to be restarted to take off project manager. Julie needs a PO by tomorrow as the vendor has a notice to proceed for Monday. PO-0003327 issued
- REQ-0002456 Mobile restroom trailer (This requisition was started on April 17th - has remained in budget fail since data entry – I'm actively working to see where exactly you're overbudget in this spend category (We have not been given any analytical reports in Workday to be able to provide you a clear and concise answer, as we had in OneSolution – which is extremely time consuming, but I'm still working on it and hope to have an update for you later this afternoon)

- REQ-0002978 Hwy. 146 boat ramp repairs – PO-0003328 issued
- PO-0003262 Jack Brooks tennis court fence repair – a variance needed to be done – variance done, currently pending Julie's queue now

Thank you!

Thank you & have a wonderful day,

BMatias (1)

THE STATE OF TEXAS §
§
COUNTY OF GALVESTON §

INTERLOCAL AGREEMENT
COOPERATIVE WORKING AGREEMENT

This Interlocal Contract ("Agreement") is made and entered into and effective as of the 1st day of September, 2019 ("Effective Date") pursuant to the Texas Interlocal Cooperation Act, Chapter 791 of the Texas Government Code (the "Act"), by and between, **Galveston County** (the "County"), a political subdivision of the State of Texas, and the **Gulf Coast Center** (the "Center"), established pursuant to provisions of Chapter 534 of the Texas Health & Safety Code Ann. (Vernon 1992) as amended.

RECITALS

WHEREAS, pursuant to the Act, the Center and the County are authorized to contract with eligible political subdivisions of the state of Texas, to perform governmental functions and services, including governmental functions in which the contracting parties are mutually interested;

WHEREAS, The Center is the Health and Human Services Commission (HHSC) designated mental health local authority established to plan, coordinate, develop policy, develop and allocate resources, supervise, and ensure the provision of community based mental health services for the residents of Galveston County, Texas; and;

WHEREAS, the Center, in collaborative partnership with the County, initiated a Senate Bill 292 Assertive Community Treatment Criminal Justice project for jail diversion (ACT-CJ) and desires to obtain Cooperative Working Agreements (CWA) from all agencies and organizations to be involved with the ACT-CJ project;

WHEREAS, the Center, in collaborative partnership with the County, desires to enhance the Center's Assertive Community Treatment Team to add a specialized ACT criminal justice worker and to increase capacity for mental health services including psychiatry and peer services for a caseload of ten Galveston County jail high jail utilizers.

NOW, THEREFORE, in consideration of the mutual covenants and conditions contained in this Agreement and other good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, the County and Center agree to the following terms, covenants, and conditions:

ARTICLE 1 – CENTERS RESPONSIBILITY AND SERVICES.

Section 1.01 The Center agrees to provide the majority of Mental Health care services for the SB 292 ACT criminal justice participants.

Section 1.02 The Center agrees to provide qualified treatment staff inclusive of a:

a. ACT Criminal Justice Professional - The ACT Criminal Justice Professional conducts initial and on-going assessments to determine ACT-CJ project eligibility as well as identify biopsychosocial needs, on-going assessment of emerging participant needs, recommendation of subsequent modifications to participant Recover Plans, and triage and management of psychiatric crises. ACT Criminal Justice Professional obtains weekly clinical updates from each treatment provider and routinely delivers direct clinical interventions to ACT-CJ project participants and support systems. The ACT Criminal Justice Professional will monitor participant's compliance with the treatment plan by contacting treatment providers and assisting participants with non-compliance, through counseling and affirmations. Additional responsibilities include obtaining and relaying treatment updates to the ACT manager and service area director.

b. Psychiatry Capacity - the ACT-CJ project requires an additional 4 hours a week of psychiatry for the caseload of jail high utilizers.

c. Peer Support Specialist - The Peer Support Specialist is an individual in recovery who has been trained to use their recovery story to help other individuals in their recovery journey. The ACT-CJ Peer Support Specialist engages one-on-one with ACT-CJ participants offering recovery goal setting through the use of self-management recovery tools. The ACT-CJ Peer Support Specialist assists participants with the development of their Wellness Action Plan and serves as a model for personal recovery.

d. Strategic Planner- a Strategic Planner will be contracted for 75 hours of strategic planning services to assist the Galveston County Criminal Justice-Mental Health Collaborative with further development of the collaborative and to lead the a process of considering other needed system changes suggested in the Galveston County Justice System Assessment.

Section 1.03. Training And Continuing Education. All ACT-CJ team members including Center designated employees, must seek out and attend special ongoing training and education on evidence based best practices for the justice involved mentally ill. Team members should then, in consultation with the Steering Committee, review and revise processes that need to be updated.

Section 1.04 Center staff designated to work for the ACT-CJ project must follow the policy, procedures, and program requirements of the project.

ARTICLE 2 – FINANCIAL SUPPORT OF THE COUNTY

As a demonstration of support for the ACT Criminal Justice Project, The County agrees to provide the local match of $59,860 for The Center to request $59,68- in Senate Bill 292 funds on behalf of our collaborative. The Center will provide an invoice with supporting documentation in support of the reimbursement request.

ARTICLE 3 – MONTHLY PAYMENTS

The County will review monthly invoices from the Center with backup documentation of eligible expenditures and reimburse the Center for documented cost within thirty (30) days of receiving the Center's invoice.

ARTICLE 4 - TERM AND TERMINATION

This agreement shall become effective September 1, 2019 and remain in effect until terminated by either party, without cause, after sixty (60) days written notice to the other party

ARTICLE 5 – LIABILITY

Section 5.01 - No Personal Liability of Center. To the extent allowed by law the Center's officers, either singularly or collectively, are not personally liable on this Agreement or for any breach thereof.

Section 5.02 - No Personal Liability of the County. To the extent allowed by law, the County's officers, agents and employees, either singularly or collectively, are not personally liable on this Agreement or for any breach thereof.

ARTICLE 6 – MISCELLANEOUS

Section 6.01 - Laws. The parties hereto agree to abide with all applicable laws, regulations, and grant provisions of the United States, the State of Texas, and any other lawful authorities having jurisdiction.

Section 6.02 - Notices. All notices, demands, or requests from one party to another shall be in writing and shall be personally delivered, sent by mail, certified, registered, express or overnight, postage prepaid, or sent by facsimile transmission, to the addresses stated in this Section, or to such other address as the party may request in writing, and are deemed to have been given at the time of delivery:

Galveston County
County Courthouse
722 Moody Suite 200
Galveston, Texas 77551
(409) 766-2244
in any case to the attention of the County Judge.

Gulf Coast Center
10000 EF Lowry Expwy, #1220
Texas City, Texas 77591 (express or overnight mail),
in any case to the attention of the Chief Executive Officer.

Section 6.03 - Texas Law to Apply and Venue. This Agreement shall be construed under and in accordance with the laws of the State of Texas, and all obligations of the parties created hereunder are performable in Galveston County, Texas.

Section 6.04 - Legal Construction. In case any one or more of the provisions contained in this Agreement is for any reason held to be invalid, illegal, or unenforceable in any respect, such invalidity, illegality, or unenforceability does not affect any other provision hereof and this Agreement will be construed as if such invalid, illegal, or unenforceable provision had never been contained herein, if consistent with the overall intent of this Agreement.

Section 6.05 - Amendment. No amendment, modification, or alteration of the terms of this Agreement is binding unless in writing, dated subsequent to the Effective Date and executed by the County and the Center or their successors and permitted assigns.

Section 6.06 - Exhibits. All Exhibits attached to this Agreement are incorporated by reference.

Section 6.07 - Counterparts. This Agreement may be executed in any number of counterparts, and each counterpart is deemed to be an original instrument, but all such counterparts together constitute but one Agreement. A photocopy or facsimile reproduction of an original signature of a party on this Agreement binds that party to the terms, covenants and conditions of this Agreement.

Section 6.08 - Time is of the Essence. Time is of the essence in this Agreement.

Section 6.09 - Headings. The headings, captions, and arrangements used in this Agreement are for convenience only and do not affect the interpretation of this Agreement.

This agreement is executed by the parties in multiple originals on the dates set forth below following the authorized signature of the party representatives.

STEPHEN D. HOLMES
Galveston County Commissioner
Precinct Three

November 1, 2017

Melissa Tucker, CEO
Gulf Coast Center
10000 Emmett F. Lowry
Suite 1230
Texas City, Texas 77591

Dear Melissa,

Galveston County leadership remains focused and committed to managing the growth in the jail population, diversion of mentally ill persons from jail to community treatment, and reduction of recidivism to improve public safety for the citizens of Galveston County. System change requires incremental improvements for which financial support is often necessary. It is for these reasons that Galveston County supports Gulf Coast Center's application for SB292 funding.

As recommended in the *Galveston County Justice System Assessment* completed by The Council of State Governments' Justice Center, in partnership with Texas Meadows Mental Health Policy Institute Foundation, local entitites collectively initiated an informal law enforcement mental health collaborative council with plans to formalize further. This initial council meeting included senior leadership representation from multiple entities: Galveston County Judge's Office, Gulf Coast Center, Galveston County Jail, Galveston County Sheriff's Office and Mental Health Deputy Division, as well as the medical prescriber currently in the county jail, Soluta. Initial discussion included a focus on collaborative efforts, high utilizers of the system as a whole, as well as new legislative changes.

An additional recommendation made in the *Galveston County Justice System Assessment* was for Gulf Coast Center to consider incorporating a criminal justice professional to the agency's Assertive Community Treatment (ACT) team to work directly with area law enforcement to identify high utilizers in need of assertive community engagement. Galveston County leadership supports the application for funds and recognizes the value of the law enforcement mental health collaborative to help identify and prioritize individuals to be served through the enhancement.

As a demonstration of this support, Galveston County agrees to provide the required local match of $59, 860 for Gulf Coast Center, as the lead applicant, to request $59, 860 of SB292 funds on behalf of our county collaborative. It is clear that accessing SB292 funds for the purpose outlined in the application, and referenced *Galveston County Justice Assessment*, directly supports Galveston County's efforts to reduce recidivism rates, arrests, and incarceration amount of individuals with mental illness and will directly impact jail diversion resources and alternatives within our county.

This letter of support will serve as confirmation of Galveston County's intent to provide the required local match of $59,860. Our local match is in support of the Galveston County SB 292 funding application to increase the Gulf Coast Center's ACT team capacity to serve as a jail diversion resource for a caseload of mentally ill persons that chronically readmit to the county jail. As part of the county collaborative that will continue to meet to address the findings of the *Galveston County Justice System Assessment*, I agree that expanding the ACT team's capacity to offer jail diversion and intensive outpatient treatment alternatives will assist in reducing recidivism for these persons that need help to break the cycle of jail recidivism.

Sincerely,

Stephen D. Holmes
Galveston County Commissioner
Precinct Three

User Agency/Department Contact: Justin West

Phone: 281-316-8711

Email: Justin.West@co.galveston.tx.us

Description of Service: Ballistic protection for Galveston County Constable Precinct 4

Date of Submission to Procurement: 10/17/2025

Submit document via email to: justin.west@co.galveston.tx.us

SECTION II

The following are EXCEPTIONS to Competitive Procurement for Professional Services.
Select the appropriate exception.

(a) *Sole* Source: A Sole Source Procurement is a sourcing method used to procure a service without competition when it has been determined that there is only one source for the required service that is capable of meeting the requirements of the acquisition as defined in the Scope of Work or specifications.

Sound procurement practice requires that a Sole Source procurement occurs if it has been determined that there is only one source for the required service and not as an attempt to contract with a favored service provider.

(b) *Single* Source: A Single Source Procurement is a sourcing method used to procure a service from one source, without soliciting competition, even though there are other vendors that can provide the service.

Agencies/ Departments must show through documentation that the selection of the source was based on an objective basis and justifiable reason, and the source selected is the most advantageous for the County to fulfill a given requirement as defined in the Scope of Work or specifications.

All content is proprietary and confidential. ©2022 Angel Armor, LLC. All rights reserved.

SECTION III

A. NEEDS ASSESSMENT

What is the need?

The need is to provide ballistic armor carriers to Galveston County Constable Precinct 4. The Angel Armor® RISE® Tactical Carrier features the modular design qualities of a tactical vest with the professional attributes of a uniform carrier. Building upon Angel Armor's patented design features, Rise Tactical Carrier (RTC) provides a robust set of standard features with options to change configurations based on your expectations of an external carrier.

The Rise Tactical Carrier is available in two NIJ 0101.06 threat levels, NIJ Level II and NIJ Level IIIA. The NIJ Level II option is available in one distinct ballistic package, Premium 2.0, and the NIJ Level IIIA is available in four distinct ballistic packages: Elite, Ultra-Premium, Premium, and Standard.

RISE Tactical Carrier is a sleek and versatile platform built to handle any mission. Field tested and design influenced by operators, it offers a wide range of mission-specific configurations without compromising protection, comfort, or mobility. Extensive modular features set scale up or down with minimal effort and maximum efficiency. Constructed with premium, breathable materials that are lightweight and durable. The tactical' s innovative modular design is driven by Angel Armor's belief that protection should match your current mission, and the next one.

The Truth 308 Ultra plate provides complete NIJ Level III protection in a lightweight, thin and affordable package that doesn't compromise officer mobility. When worn in conjunction with one of Angel Armor's soft ballistic packages, the Truth 308 Ultra plate has been tested to defend against NIJ Level III threats, provides tab resistance from Spike Level 3 and offers special threat protection from the7.62x51mm M80 Ball NATO FMJ @ 2780 +/- 30fps, 7.62x39mm PS Ball (MSC) @ 2400 +/- 30 fps and 5.56x45mm M193 @ 3250 +/- 30fps.

To elevate officer protection, the Truth 308 Ultra plate has the capability to upgrade to an NIJ Level III+ system. Simply snap on Angel Armor's ceramic strike face, Truth CSF, to any Truth 308 Ultra plate to create the Truth 855 modular plate system. The Truth 855 is designed to defeat all Truth 308 Ultra threats in addition to the 5.56x45mm M855 (Green Tip) @ 2780 +/- 30fps. This ultra-thin and lightweight plate system features a proprietary design in an innovative and modular package, so officers never have to go to their trunk for active shooter kits again.

All content is proprietary and confidential. ©2022 Angel Armor, LLC. All rights reserved.
The Angel Armor name and associated trademarks are the property of Angel Armor, LLC. All other trademarks are the property of their respective owners.

Why is there a need?
From January 1, 2021, to September 30, 2021, there was a 51 percent increase in the number of police officers killed in the line of duty when compared to the same period last year*.

In 2020, 60,105 Law Enforcement Officers were assaulted in the line of duty nationwide. That's 4,071 more officers assaulted in 2020 than the 56,034 assaults reported in 2019. 2,744 of these officers were assaulted with firearms.

Angel Armor's R.T.C. is designed to address nearly every relevant ballistic threat officers may face while on-duty. When paired with the Truth SNAP plate system, R.T.C. will provide the officers of Galveston County Constable, Precinct 4 with proactive, market-leading all day protection, in every situation.

**According to data published from the Uniform Crime Report conducted by Law Enforcement Officers Killed and Assaulted (LEOKA)*

B. MARKET RESEARCH

Identify all the contractors that can meet this need.
Angel Armor is the only manufacturer that offers the features found in the Tactical and 308 Ultra plate, with multiple protected patents.

- **Angel Armor RISE® Body Armor System: Patents Granted**
  - Ballistic-Resistant Garment Having An Incrementally Adjustable Fit – US 10,584,942 (Issued March 10, 2020)
  - Ballistic-Resistant Garment – US 12,085,369 (Issued September 12, 2024)

- **Angel Armor Truth SNAP® Rifle Plates: Patents Granted**
  - Releasably Engageable System Of Ballistic-Resistant Panels – US 10,495,418 (Issued December 3, 2019)
  - Releasably Engageable System of Ballistic-Resistant Panels – US 10,466,015 (Issued November 5, 2019)

See Section III C for additional innovative and advanced features found in the Tactical Carrier and 308 Ultra.

C. WHY IS THIS PARTICULAR CONTRACTOR MOST ADVANTAGEOUS TO THE AGENCY?

Angel Armor is the only manufacturer and sole ***Full-Service Vendor*** of Angel Armor products capable of providing a range of value-added services directly to their customers. The company is focused solely on ensuring each officer receives industry-leading armor to fit their needs. Angel Armor is dedicated to its customers' full satisfaction and has the unique ability to personally follow-up with every order received.

Full-Service Vendor benefits include immediate access to and full control of product design, research, and development; trained product experts to assist in measuring, sizing, adjustments and alterations; direct access to the company's dedicated Customer Service team focused solely on Angel Armor products; the ability to deliver products direct to the customer with industry-leading delivery times and a satisfaction guaranteed warranty.

In addition to these **Full-Service Vendor** benefits, Angel Armor offers the following unique features in one complete external armor carrier with multiple patents granted (see Section III B for patents):

- **HIGH LEVEL PRODUCT SPECS**
  - Accommodates RISE ballistics, which are scalable between all Angel Armor carrier platforms
  - Industry-leading weight distribution from Angel Armor's patented QuadCore External Cummerbund with rapid release FirstSpear® Tubes
  - All-day rifle protection ready when coupled with patented Truth SNAP rifle plates
  - Front/Back magnetic quick-attach accessories quickly scale between mission kits using Fidlock® Technology
  - Removable load bearing side covers accommodate 6x6 Truth SNAP rifle plates for increased protection
  - Removable shoulder pads and torso panel inserts increase comfort
  - Rear Velcro loop field for back ID placards
  - Front side-load plate pockets allow for quick up armor rifle plates
  - Rapid release FirstSpear® Tube™ upgrade available
- **ULTIMATE COMFORT**
  - Custom sizing for male and female officers with an individualized, tailored fit
  - Industry-leading weight distribution from Angel Armor's patented QuadCore 360 Attachment System
  - Patented technology features multiple points of incremental adjustability
  - Premium moisture wicking, antimicrobial mesh lining with optional thermal comfort for evaporative cooling and odor management
  - Shoulder straps with on body adjustment attach directly to internal armor packages to help prevent shifting and curling
  - Fixed position side waist pockets with bungee retention
  - Optional belly band for faster donning time while maintaining proper side ballistic overlap
- **PREMIUM QUALITY**
  - Made in the USA using only premium materials
  - Durable 500 Denier CORDURA shell with lightweight pill cut PALS platform using tear resistant laminate fabric with reinforced stitching and loop face at the front and back
  - YKK zippers used throughout

All content is proprietary and confidential. ©2022 Angel Armor, LLC. All rights reserved.
The Angel Armor name and associated trademarks are the property of Angel Armor, LLC. All other trademarks are the property of their respective owners.

- APEX MILLS mesh lining and optional air emission channels wick moisture away while providing additional ventilation
- Tear resistant laminate fabric with low-profile pill cut PALS webbing

- **MADE IN THE USA**
  - Designed, developed and manufactured in the USA
  - High-production volume capable
  - 60-day lead time

Angel Armor is the only manufacturer in the United States that provides the following unique features in one complete **Truth 308 Ultra** ballistic plate system with multiple patents:

- **GROUNDBREAKING**
  - The only ultra lightweight rifle plate on the market with modular threat protection capability
  - Upgrade any Truth 308 Ultra base rifle plate with any Truth CSF for elevated protection from handgun, rifle, stab and special threats, including 5.56x45mm M855 (Green Tip)
  - Truth 308 Ultra plate is 0.53” thick, featuring radiused edges to reduce uniform ‘printing’
  - Developed and Certified to NIJ Standard 0101.06 Level III when worn in conjunction with RISE Level IIIA Ultra-Premium Armor Package
  - Tested to NIJ 0101.07 standard when worn in conjunction with RISE Level II or Level IIIA armor packages
- **TOUGH & SLEEK**
  - Backface signature exceeds NIJ requirements for listed threat projectiles when tested ICW Angel Armor’s Level IIIA soft body armor
  - Truth 308 Ultra plate components provide moisture resistance and do not require the use of polyurethane coating or nylon wrapping for a refined aesthetic finish
- **CUSTOMIZABLE**
  - Magnetic, patent-pending SNAP system provides the potential to armor up or down with tiered and modular threat protection
  - Variety of sizes available, including 7x9”, 8x10”, 10x12” and an exclusive 9x11" maximum coverage plate; available in Shooter’s Cut and Full Cut for increased mobility and protection
  - Designed to be used ICW RISE body armor but can be used with most soft body armor vests
- **MADE IN THE USA**
  - Designed, developed and manufactured in the USA
  - High-production volume available

PRODUCT REVIEWS FROM CURRENT OFFICERS WEARING THE RISE FAMILY OF PRODUCTS:

- "I was a little skeptical at first because of the weight difference between my old vest and this vest with all the plates in it but once I put the vest on and strapped it up it felt lighter and fit more comfortably than my old vest even with the added weight from all the plates."
- "We struggled with the subject for several minutes on the ground, and again in the ambulance. During that time, my Angel Armor vest never moved or shifted out of place. After the altercation, I never even had to readjust my vest. Furthermore, my vest never hindered my performance and was not even noticeable."
- "As one of the first on scene I was inside the small car lot when the suspect began shooting rifle rounds through the office (trailer) walls. Rounds were hitting cars around us and skipping off the ground. Having this extra layer of protection without having to have wasted time retrieving a "heavy vest" from my car was an amazingly comforting feeling. My trust in your product helped me have a slight comfort during a very dangerous situation."

A. NEEDS ASSESSMENT

What is the need?

The need is the ability to provide ballistic armor carriers to Galveston County Constable Precinct 4. The Angel Armor® RISE® Stealth Carrier features a combination of simplicity and superior functionality. Stealth sets a new standard for concealable carrier design through maximum protection, comfort, and durability. Sleek and clean, Stealth builds upon Angel Armor's patented design features in a covert package with minimal printing.

The Stealth Carrier is available in two NIJ 0101.06 threat levels, NIJ Level II and NIJ Level IIIA. The NIJ Level II option is available in one distinct ballistic package, Premium 2.0, and the NIJ Level IIIA is available in four distinct ballistic packages: Elite, Ultra-Premium, Premium, and Standard.

Stealth stays true to the iconic RISE DNA with the patented QuadCore Attachment System® offering a fully adjustable belt for superior vest securement and market-leading weight distribution. Stealth is also equipped with front and rear internal Truth SNAP® plate pockets for patented, all day rifle protection.

Stealth incorporates premium materials and construction methods providing years of service in the field while offering extensive features to help the officer conduct daily tasks with ease and safety. The RISE Stealth Carrier will provide the officers of Galveston County Constables Precinct 4, with a high level of protection in our lowest profile fit.

Why is there a need?

From January 1, 2021, to September 30, 2021, there was a 51 percent increase in the number of police officers killed in the line of duty when compared to the same period last year*.

In 2020, 60,105 Law Enforcement Officers were assaulted in the line of duty nationwide. That's 4,071 more officers assaulted in 2020 than the 56,034 assaults reported in 2019. 2,744 of these officers were assaulted with firearms.

These figures are a somber reminder of the risk our nation's Law Enforcement Officers face every day. Angel Armor's RISE Stealth Carrier is designed to address nearly every relevant ballistic threat an officer might face while on duty. When paired with Truth SNAP rifle plates, Stealth provides the officers of Galveston County Constables Precinct 4 with proactive, market-leading all day protection, in every situation.

Subject: Request for Sponsorship – Budget Transfer

Good afternoon Commissioner Apffel,

I'm reaching out to request your sponsorship for a budget transfer needed to align funding within our IT accounts.

We're proposing to move **$92,000 from Internet/Data** to support the following:

- **$62,000** to *Extraordinary Supplies* for various operational needs and network supplies, including replacement parts, cabling, and other critical materials required to maintain and support the County's network infrastructure
- **$30,000** to *Other Contract Services* for network consulting

Your sponsorship will allow us to complete this transfer for inclusion on the upcoming Commissioners Court agenda. Please let me know if you're okay with sponsoring this item.

Thank you and have a great weekend!

IMPORTANT NOTICE: The Nonadmitted & Reinsurance reform act (NRRA) went into effect July 21, 2011. Accordingly, surplus lines tax rates and regulations are subject to change which could result in an increase or decrease of the total surplus lines taxes and/or fees owed on this placement. If a change is required, we will promptly notify you. Any additional taxes and/or fees due must be promptly remitted to Alliant Insurance Services, Inc.

IMPORTANT NOTICE: The Foreign Account Tax Compliance Act (FATCA) requires the notification of certain financial accounts to the United States Internal Revenue Service. Alliant does not provide tax advice. Please contact your tax consultant for your obligations regarding FATCA.

Alliant embraces a policy of transparency with respect to its compensation from insurance transactions. Details on our compensation policy, including the types of income Alliant may earn on a placement, are available at www.alliant.com. For a copy of our policy or for inquiries regarding compensation issues pertaining to your account contact: Alliant Insurance Services, Inc., Attn: General Counsel, 701 B St., 6th Floor, San Diego, CA 92101.

Hello Christie,

Thank you for the update. We'll begin working on the Budget Amendment and submit it for routing once the project is approved.

Respectfully,

From: Motogbe, Christie J <ChristieJ.Motogbe@galvestoncountytx.gov>

Subject: RE: Mobility and Drainage Bond Program

Good afternoon, Rudy,

Hope your day is going well. We will create funds 3314 "Unlimited Tax Road Bonds Series 2026" and 3374 "Limited Tax Flood Control Bonds Series 2026". We should use new cost center 312190 "Roads by Engineering" for road projects and new cost center 296190 "Flood Control by Engineering" for the flood control/drainage projects. Please note that for roads, if Engineering is going to be doing the work or paying bills we should use cost center 312190; if Road & Bridge is going to be doing the work or paying bills, we should use cost center 312110. This way, requisitions/PO's/invoices will route to the appropriate department.

As discussed last week, the only operational budget amendment needed is for activity in fund 1101: the debit to "Transfer to" and credit to "Budgeted Reserves". The "Transfer from" and expenses in the capital project funds will be done by Austin in the project module, which will also route for approvals.

We will also create new spend categories for "Transfer to Unlimited Tax Road Bonds Series 2026" and "Transfer to Limited Tax Flood Control Bonds Series 2026".

Thank you!

Sincerely,

From: Gomez, Rodolfo <Rodolfo.Gomez@galvestoncountytx.gov>

Hello Christie,

Perfect, we'll begin processing the Budget Amendment on our side once Austin is done. Please let us know if there is a specific way you want us to set it up.

Respectfully,

From: Motogbe, Christie J <ChristieJ.Motogbe@galvestoncountytx.gov>

Good morning, Rudy,

Hope you're well today. Use of fund 3313 will work for the road projects. For flood/drainage projects, we will set up a new fund and will provide this as soon as we can today. Regarding the cost center, I will confirm this as well.

Thank you!

Sincerely,

Hello All,

Following up on the initial email, we were able to find a previous BA done in April. We will be pulling from the 3313 - Unlimited Tax Road Bonds - 2019 fund. Do you recommend we utilize the 3313-190100 account for these projects?

Good afternoon,

Just want to chime in. We definitely don't want to use a 4xxx fund. Those are only used to post our debt payments against. If we are using bond funds, then we should use the related 3xxx for that bond issuance. Please let me know if I can provide any additional info.

Thanks,
Lauren

Hello Kenna and Austin,

The project will not be county-owned, and we are planning on using available bond funds. Would you recommend the project be created within the 4xxx or 3xxx fund? Also, should all the "Mobility and Drainage Bond" projects being using the same fund and cost center? Please let us know your recommendations.

Subject: Mobility and Drainage Bond Program

Good morning Michael,

As discussed in our meeting, we created a Smartsheet to keep track of the "Mobility and Drainage Bond Program". We also discussed the first project being the "Dickinson Bayou: SH3 to FM 517" with an estimated cost of $2,500,000 categorized as 100% services. We will begin coordinating with the Auditors Office to place the item on for 11/08 Commissioners Court. Please let me know if there is anything we may need to update.

On this the 10th day of November, 2025, the Commissioners Court of Galveston County, Texas convened in a regular meeting with the following members thereof present:

Mark Henry, County Judge;
Darrell A. Apffel, Commissioner, Precinct No. 1;
Joe Giusti, Commissioner, Precinct No. 2;
Hank Dugie, Commissioner, Precinct No. 3;
Robin Armstrong MD, Commissioner, Precinct No. 4;
Dwight D. Sullivan, County Clerk

when the following proceedings, among others, were had, to-wit:

WHEREAS, the subdivision plat First Addition to Algo Suburbs is presently on file with the County Clerk of Galveston County. It may be found in Volume 3, Page 1 of the Map Records of Galveston County, Texas; and

WHEREAS, by application attached hereto as Exhibit "A", Daphine Ann Massey has filed their Petition and Application for permission to revise plat; and

WHEREAS, Local Government Code, Section 232.009 requires notice of this application be posted on the county website and notice sent to landowners within 200 feet of the subdivision plat to be revised; and

WHEREAS, by Order of the Commissioners Court on September 29, 2025, Michael Shannon, County Engineer, was directed to give notice of the application by mail and posting on the county's website; and

WHEREAS, pursuant to such Order, letters were sent to landowners within 200' of the subdivision to be revised and notice was posted on the Galveston County website; and

WHEREAS, the application of Daphine Ann Massey has once again this day been presented to the Commissioners Court; and

WHEREAS, it appearing that all requirements of Local Government Code, Section 232.009 have been met; that no opposition to the application was heard, and that the proposed revision will not interfere with the established rights of any owner of a part of the subdivided land.

BE IT THEREFORE ORDERED, that the application for L4 Ranch replat be approved and that Daphine Ann Massey be hereby permitted to revise the subdivision plat by filing the revision for record with the County Clerk.

UPON MOTION DULY MADE AND SECONDED the above Order was passed this 10th day of November, 2025.

EXHIBIT "A"

APPLICATION FOR PERMISSION
TO REVISE SUBDIVISION PLAT

THE COMMISSIONERS COURT
OF GALVESTON COUNTY, TEXAS

TO THE HONORABLE COMMISSIONERS' COURT OF GALVESTON COUNTY, TEXAS

NOW COMES Daphine Ann Massey, and files this Petition and Application to revise plat of First Addition to Algoa Suburbs, subdivision plat recorded in Volume 3, Page 1 of the Map Records of Galveston County, Texas to:

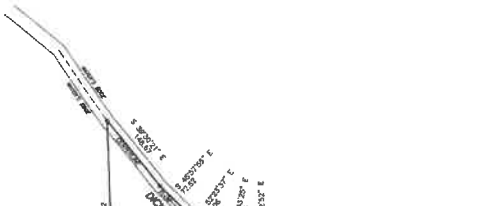
1 lot into 2 lots

Petitioner requests permission to revise the aforementioned subdivision plat in accordance with and as provided for in Local Government Code Section 232.009, and in support thereof would respectively show unto the court the following, to wit:

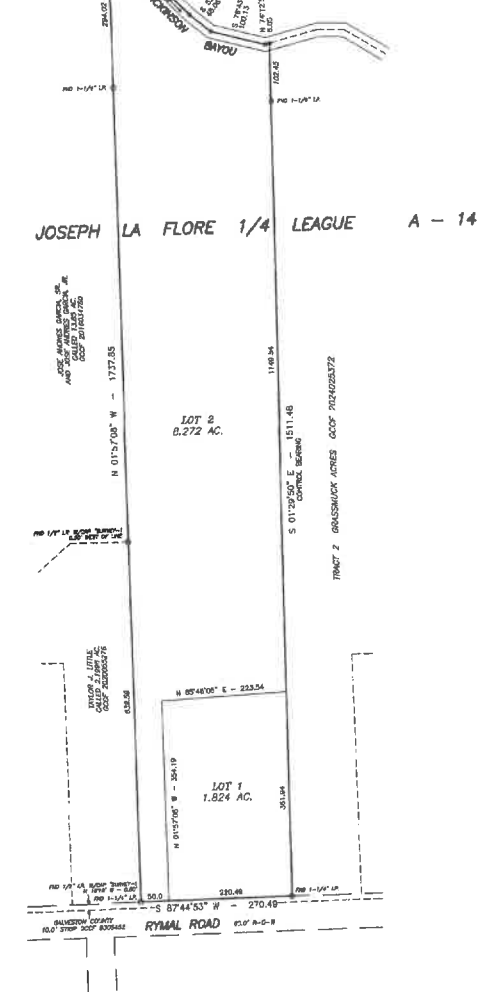
1. That Petitioner owns land in the aforementioned subdivision that is subject to the subdivision controls of Galveston County.

2. A copy of the proposed re-plat is attached hereto as Exhibit "B"

3. The portion of the subdivision plat that will be revised is:
   part of Lots 3 & 4



4. The revision will not interfere with the established rights of any owner of a part of the subdivided land.



5. Petitioner is willing to pay the County any administrative costs that may be involved including the filing for record with the County Clerk a revised plat or part of a plat showing the changes made to the original plat.

WHEREFORE, Petitioner prays that notice of this petition and application be given to the required property owners in Galveston County and that said notice be published as required by law; that upon final hearing the Honorable Court adopt an order granting permission to the petitioner to revise the subdivision plat and that this Honorable Court enter such further orders and take further action as may be proper.

3) Bearings are record, based on the found monumentation of the East right-of-way line of Highland Road.

4) Planting, flower beds, and other landscaping or fill materials are not permitted in side lot drainage swales or drainage/detention easements. Maintenance of side lot drainage swales or detention easements are the responsibility of the property owner.

THE STATE OF TEXAS
COUNTY OF GALVESTON

We, Vicki Brown, Dale Weyer and Janell Grossmuck, owners by virtue of deed recorded in/under Clerk's File No. 2024013542 of the Official Public Records of Real Property of Galveston County, Texas, hereinafter referred to as Owner of the tract described in the above and foregoing map of HIGHLAND ROAD REPLAT, do hereby make and establish said subdivision and development plan of said property according to all lines, dedications, restrictions and notations on said maps or plat and hereby dedicate to the use of the public forever, all streets (except those streets designated as private streets), alleys, parks, water courses, drains, easements and public places shown thereon for the purposes and considerations therein expressed; and do hereby bind ourselves, or heirs, successors and assigns to warrant and forever defend the title to the land so dedicated.

FURTHER, Owner has dedicated on by these presents do dedicate to the use of the public for public utility purposes forever unobstructed aerial easements. The aerial easements shall extend horizontally an additional eleven feet six (11' 6") inches for ten feet (10' 0") perimeter ground easements or five feet six (5' 6") for sixteen feet (16' 0") perimeter ground easements, from a plane sixteen feet (15' 0") above ground level upward, located adjacent to and adjoining said public utility easements that are designated with aerial easements (U.E. & A.E.) as indicated and depicted hereon, whereby the aerial easement totals twenty one feet, six inches (21' 6") in width.

FURTHER, Owner has dedicated and by these presents do dedicate to the use of the public for public utility purposes forever unobstructed aerial easements. The aerial easements shall extend horizontally an additional ten feet (10' 0") for ten fee (10' 0") back-to-back ground easements or seven feet (7' 0") for sixteen feet (16' 0") back-to-back ground easements, from a plane sixteen feet (16' 0") above ground level upward, located adjacent to both sides and adjoining said public utility easements that are designated with aerial easements (U.E. & A.E.) as indicated and depicted hereon, whereby the aerial easement totals thirty feet (30' 0") in width.

FURTHER, Owner does hereby declare that all parcels of land designated as lots on this plat are originally intended for the construction of residential dwelling units thereon and shall be restricted for same under the terms and conditions of such restrictions filed separately.

FURTHER, Owner does hereby convenant and agree that all of the property within the boundaries of this plat shall be restricted to prevent the drainage of any septic tanks into any public or private street, road or alley or any drainage ditch, either directly or indirectly.

FURTHER, Owner does hereby dedicate to the public a strip of land thirty (30') feet wide on each side of the center line of any and all bayous, creeks, gullies, ravines, draws, sloughs, or other natural drainage courses located in said plat, as easements for drainage purposes, giving Galveston County, or any other governmental agency, the right to enter upon said easement at any and all times for the purpose of construction and maintenance of drainage facilities and structures.

FURTHER, Owner does hereby covenant and agree that all of the property within the boundaries of this plat and adjacent to any drainage easement, ditch gully, creek or natural drainage way shall hereby be restricted to keep such drainage ways an easements clear of fences, building, planting and other obstructions to the operation and maintenance of the drainage facility and that such abutting property shall not be permitted to drain directly into this easement except by means of an approved drainage structure.

FURTHER, the Owner hereby certifies that this replat does not attempt to alter, amend, or remove any covenants or restrictions; we further certify that no portion of the preceding plat was limited by deed restriction to residential use for not more than two (2) residential units per lot.

THENCE South, along the West right-of-way of said Jack Beaver Road and parallel to the West line of said Lot 10, at a distance of 353.20 feet pass the South line of said Lot 10 and the North line of said Lot 11, a total distance of 529.80 feet to the Southeast corner of the herein described tract, a found flat bar;

THENCE West, parallel to the North line of said Lots 10 and 11, a distance of 296.11 feet to the most Southerly Southwest corner of the herein described tract, same being the Southeast corner of said Butler tract, a found 1/2 inch rod, bearing N 61° W a distance of 0.8 feet;

THENCE North, along the East line of said Butler tract, and parallel to the West line of said Lots 10 and 11, at a distance of 176.80 feet pass the North line of said Lot 11 and the South line of said Lot 10, a total distance of 312.00 feet to an interior point for corner, and being the Northeast corner of said Butler tract, a found 1/2 inch rod, bearing N 75° W a distance of 0.5 feet;

THENCE West, along the North line of said Butler tract, and parallel to the North line of said Lot 10, a distance of 105.00 feet to a point for corner and being the Northwest corner of said Butler tract, a found 1/2 inch rod, bearing N 83° W a distance of 0.3 feet;

THENCE North, parallel to the West line of said Lots 10 and 11, a distance of 217.80 feet to the PLACE OF BEGINNING and containing 4.126 acres (179,748 square feet) of land, more or less.

THE STATE OF TEXAS
COUNTY OF GALVESTON

We, Donna Lee Vaughn and Robert Wayne Vaughn, owners hereinafter referred to as Owner of the lots described in the above and foregoing map of "LONG'S SUBDIVISION PARTIAL REPLAT", do hereby make and establish said subdivision and development plan of said property according to all lines, dedications, restrictions and notations on said maps or plat and herby dedicate to the use of the public forever, all streets (except those streets designated as private streets), alleys, parks, water courses, drains, easements and public places shown thereon for the purposes and considerations therein expressed; and do hereby bind ourselves, or heirs, successors and assigns to warrant and forever defend the title to the land so dedicated.

FURTHER, Owners have dedicated an by these presents do dedicate to the use of the public for public utility purposes forever unobstructed aerial easements. The aerial easements shall extend horizontally an additional eleven feet six (11' 6") inches for ten feet (10' 0") perimeter ground easements or five feet six (5' 6") for sixteen feet (16' 0") perimeter ground easements, from a plane sixteen feet (16' 0") above ground level upward, located adjacent to and adjoining said public utility easements that are designated with aerial easements (U.E. & A.E.) as indicated and depicted hereon, whereby the aerial easement totals twenty one feet, six inches (21' 6") in width.

FURTHER, Owners have dedicated and by these presents do dedicate to the use of the public for public utility purposes forever unobstructed aerial easements. The aerial easements shall extend horizontally an additional ten feet (10' 0") for ten feet (10' 0") back-to-back ground easements or seven feet (7' 0") for sixteen feet (16' 0") back-to-back ground easements, from a plane sixteen feet (16' 0") above ground level upward, located adjacent to both sides and adjoining said public utility easements that are designated with aerial easements (U.E. & A.E.) as indicated and depicted hereon, whereby the aerial easement totals thirty feet (30' 0") in width.

FURTHER, Owners do hereby declare that all parcels of land designated as lots on this plat are originally intended for the construction of residential dwelling units thereon and shall be restricted for same under the terms and conditions of such restrictions filed separately.

FURTHER, Owners do hereby convenant and agree that all of the property within the boundaries of this plat shall be restricted to prevent the drainage of any septic tanks into any public or private street, road or alley or any drainage ditch, either directly or indirectly.

FURTHER, Owners do hereby dedicate to the public a strip of land thirty (30') feet wide on each side of the center line of any and all bayous, creeks, gullies, ravines, draws, sloughs, or other natural drainage courses located in said plat, as easements for drainage purposes, giving Galveston County, or any other governmental agency, the right to enter upon said easement at any and all times for the purpose of construction and maintenance of drainage facilities and structures.

FURTHER, Owners do hereby covenant and agree that all of the property within the boundaries of this plat and adjacent to any drainage easement, ditch gully, creek or natural drainage way shall hereby be restricted to keep such drainage ways an easements clear of fences, building, planting and other obstructions to the operation and maintenance of the drainage facility and that such abutting property shall not be permitted to drain directly into this easement except by means of an approved drainage structure.

FURTHER, the Owners hereby certify that this replat does not attemp to alter, amend, or remove any covenants or restrictions; we further certify that no portion of the preceding plat was limited by deed restriction to residential use for not more than two (2) residential units per lot.

EXHIBIT "A"

APPLICATION FOR PERMISSION
TO REVISE SUBDIVISION PLAT

THE COMMISSIONERS COURT
OF GALVESTON COUNTY, TEXAS

TO THE HONORABLE COMMISSIONERS' COURT OF GALVESTON COUNTY, TEXAS

NOW COMES Scott Broussard, and files this Petition and Application to revise plat of Hi Point Beach Addition, subdivision plat recorded in Map Record 12, Page 37 of the Map Records of Galveston County, Texas to: Reposition the common line of Lots 28 and 29.

Petitioner requests permission to revise the aforementioned subdivision plat in accordance with and as provided for in Local Government Code Section 232.009, and in support thereof would respectively show unto the court the following, to wit:

1. That Petitioner owns land in the aforementioned subdivision that is subject to the subdivision controls of Galveston County.

2. A copy of the proposed re-plat is attached hereto as Exhibit "B"

3. The portion of the subdivision plat that will be revised is:

   Lot 28 and Lot 29

4. The revision will not interfere with the established rights of any owner of a part of the subdivided land.

5. Petitioner is willing to pay the County any administrative costs that may be involved including the filing for record with the County Clerk a revised plat or part of a plat showing the changes made to the original plat.

WHEREFORE, Petitioner prays that notice of this petition and application be given to the required property owners in Galveston County and that said notice be published as required by law; that upon final hearing the Honorable Court adopt an order granting permission to the petitioner to revise the subdivision plat and that this Honorable Court enter such further orders and take further action as may be proper.

Lot 1	0.092	4,029
Lot 2	0.081	3,526
Total	0.173	7,555

STATE OF TEXAS }
COUNTY OF GALVESTON }

I, Scott Broussard, hereinafter referred to as Owner of the 7.555 Square Feet (0.173 of one acre) described in the above and foregoing map of HI POINT BEACH ADDITION PARTIAL REPLAT NO. 1, do hereby make and establish said plat and development plan of said property according to all lines, dedications, restrictions and notations on said maps or plat and hereby dedicate to the use of the public forever, all streets, alleys, parks, water courses, drains, easements and public places shown thereon for the purposes and considerations therein expressed; and do hereby bind ourselves, our heirs, successors and assigns to warrant and defend the title to the land so dedicated.

FURTHER, Owners have dedicated and by these presents do dedicate to the use of the public for public utility purposes forever unobstructed aerial easements. The aerial easements shall extend horizontally an additional eleven feet, six inches (11' 6") for ten feet (10' 0") perimeter ground easements or five feet six inches (5' 6") for sixteen feet (16' 0") perimeter ground easements, from a plane sixteen feet (16' 0") above ground level upward, located adjacent to and adjoining said public utility easements that are designated with aerial easements (U.E. & A.E.) as indicated and depicted hereon, whereby the aerial easement totals twenty one feet, six inches (21' 6") in width.

FURTHER, Owners have dedicated and by these presents do dedicate to the use of the public for public utility purposes forever unobstructed aerial easements. The aerial easements shall extend horizontally and additional ten feet (10' 0") for ten feet (10' 0") back to back ground easements or seven feet (7' 0") for sixteen feet (16' 0") back to back ground easements, from a plane sixteen feet (16' 0") above ground level upward, located adjacent to both sides and adjoining said public utility easements that are designated with aerial easements (U.E. & A.E.) as indicated and depicted hereon, whereby the aerial easement totals thirty feet (30' 0") in width.

FURTHER, Owners do hereby declare that all parcels of land designated as lots on this plat are originally intended for the construction of residential dwelling unites thereon and shall be restricted for the same under the terms and conditions of such restrictions filed separately.

FURTHER, Owners do hereby covenant and agree that all of the property within the boundaries of this plat shall be restricted to prevent the drainage of any septic tanks into any public or private street, road, alley or any drainage ditch, either directly or indirectly.

FURTHER Owners do hereby dedicate to the public a strip of land thirty (30') feet wide on each side of the centerline of any and all bayous, creeks, gullies, ravines, draws, sloughs or other natural drainage courses located in said plat, as easements for drainage purposes and labeled as Bulkhead Building Line and Wetland Building Line on the attached plat, giving Galveston County or any other governmental agency, the right to enter upon said easement at any and all times for the purpose of construction and maintenance of drainage facilities and structures.

FURTHER, Owners do hereby covenant and agree that all of the property within the boundaries of this plat and adjacent to any drainage easement, ditch, gully, creek or natural drainage ways shall hereby be restricted to keep such drainage ways and easements clear of fences, buildings, planting and other obstructions to the operation and maintenance of the drainage facility and that such property abutting shall not be permitted to drain directly into this easement except by means of an approved drainage structure.

FURTHER, Owners do hereby covenant and agree that all of the property within the boundaries of this plat shall be restricted to provide that drainage structures under private driveways shall have a net drainage area of sufficient size to permit the free flow of water without backwater and in no instance have a drainage opening of less than one and three quarters (1-3/4) square feet (18" diameter) with culverts and bridges to be provide for all private driveways or walkways crossing such drainage facilities.

FURTHER, Owners do hereby covenant and agree that those streets located within the boundaries of this plat are always available for the general use of said owners and to the public for firemen, fire fighting equipment, police and other emergency vehicles of whatever nature at all times.

FURTHER, Owners certify and covenant that they have complied with or will comply with the existing Galveston County regulations heretofore on file with the Galveston County Engineer and adopted by the Commissioner's Court of Galveston County.

FURTHER, the Owners hereby certify that this replat does not attempt to alter, amend, or remove any covenants or restrictions; we further certify that no portion of the preceding plat was limited by deed restriction to residential use for not more than two (2) residential units per lot.
